WEBVTT

 $00:00:00.000 \longrightarrow 00:00:03.204$ Funding for Yale Cancer Answers is

NOTE Confidence: 0.902802829090909

 $00:00:03.204 \longrightarrow 00:00:06.240$ provided by Smilow Cancer Hospital.

NOTE Confidence: 0.902802829090909

 $00:00:06.240 \longrightarrow 00:00:08.420$ Welcome to Yale Cancer Answers

NOTE Confidence: 0.902802829090909

 $00:00:08.420 \longrightarrow 00:00:10.160$ with Doctor Anees Chappar.

NOTE Confidence: 0.902802829090909

 $00{:}00{:}10.160 \dashrightarrow 00{:}00{:}11.896$ Yale Cancer Answers features the

NOTE Confidence: 0.902802829090909

 $00:00:11.896 \longrightarrow 00:00:13.666$ latest information on cancer care

NOTE Confidence: 0.902802829090909

00:00:13.666 --> 00:00:15.164 by welcoming oncologists and

NOTE Confidence: 0.902802829090909

 $00:00:15.164 \longrightarrow 00:00:17.324$ specialists who are on the forefront

NOTE Confidence: 0.902802829090909

 $00:00:17.324 \longrightarrow 00:00:19.238$ of the battle to fight cancer.

NOTE Confidence: 0.902802829090909

 $00:00:19.240 \dashrightarrow 00:00:21.928$ This week it's a conversation about CAR T

NOTE Confidence: 0.902802829090909

00:00:21.928 --> 00:00:24.479 cell therapy with Doctor Timothy Robinson.

NOTE Confidence: 0.902802829090909

 $00{:}00{:}24.480 \dashrightarrow 00{:}00{:}26.450$ Doctor Robinson is an assistant

NOTE Confidence: 0.902802829090909

 $00{:}00{:}26.450 \dashrightarrow 00{:}00{:}28.026$ professor of Therapeutic radiology

NOTE Confidence: 0.902802829090909

00:00:28.026 --> 00:00:30.080 at the Yale School of Medicine

NOTE Confidence: 0.902802829090909

 $00:00:30.080 \longrightarrow 00:00:30.672$ where Dr. Chagpar

 $00:00:30.672 \longrightarrow 00:00:32.152$ is a professor

NOTE Confidence: 0.902802829090909

00:00:32.152 --> 00:00:33.040 of Surgical oncology.

NOTE Confidence: 0.935679327272727

 $00:00:34.280 \longrightarrow 00:00:35.928$ Tim, maybe we can start off by you

NOTE Confidence: 0.935679327272727

 $00:00:35.928 \longrightarrow 00:00:37.468$ telling us a little bit more about

NOTE Confidence: 0.935679327272727

 $00:00:37.468 \longrightarrow 00:00:38.920$ yourself and what it is you do.

NOTE Confidence: 0.9402536

 $00{:}00{:}39.600 \dashrightarrow 00{:}00{:}42.239$ Sure. So I am a radiation oncologist,

NOTE Confidence: 0.9402536

 $00{:}00{:}42.240 \dashrightarrow 00{:}00{:}45.558$ which means that I treat tumors or

NOTE Confidence: 0.9402536

00:00:45.558 --> 00:00:47.640 cancers using radiation therapy

NOTE Confidence: 0.9402536

 $00:00:47.640 \longrightarrow 00:00:50.040$ and I have a clinical presence,

NOTE Confidence: 0.9402536

 $00:00:50.040 \longrightarrow 00:00:51.300$ so I treat patients.

NOTE Confidence: 0.9402536

 $00:00:51.300 \longrightarrow 00:00:53.667$ I specialize in the treatment of hematologic

NOTE Confidence: 0.9402536

 $00:00:53.667 \longrightarrow 00:00:56.115$ malignancies as well as CNS disease.

NOTE Confidence: 0.9402536

00:00:56.120 --> 00:00:57.600 I also have a small lab that

NOTE Confidence: 0.9402536

00:00:57.600 --> 00:00:59.317 tries to work more on the research side,

NOTE Confidence: 0.9402536

 $00:00:59.320 \longrightarrow 00:01:00.100$ trying to figure out how

NOTE Confidence: 0.9402536

 $00:01:00.100 \longrightarrow 00:01:00.880$ to do these things better.

 $00{:}01{:}01{:}05.60 \dashrightarrow 00{:}01{:}04.016$ And so tell us a little bit more

NOTE Confidence: 0.931531986666667

 $00:01:04.016 \longrightarrow 00:01:05.996$ about what your lab is up to.

NOTE Confidence: 0.933963975

 $00:01:07.280 \longrightarrow 00:01:11.120$ Sure, my lab has been working on

NOTE Confidence: 0.933963975

00:01:11.120 --> 00:01:13.980 ways to try and figure out with lymphoma

NOTE Confidence: 0.933963975

 $00:01:13.980 \longrightarrow 00:01:16.560$ how to make our treatments better.

NOTE Confidence: 0.933963975

00:01:16.560 --> 00:01:18.148 As a radiation oncologist,

NOTE Confidence: 0.933963975

00:01:18.148 --> 00:01:20.530 I think about radiation a lot.

NOTE Confidence: 0.933963975

00:01:20.530 --> 00:01:22.225 Lymphomas are unique in that

NOTE Confidence: 0.933963975

 $00:01:22.225 \longrightarrow 00:01:24.250$ in many cancers we use

NOTE Confidence: 0.933963975

 $00:01:24.250 \longrightarrow 00:01:25.936$ radiation to treat many

NOTE Confidence: 0.933963975

00:01:25.936 --> 00:01:27.450 different cancers and solid tumors,

NOTE Confidence: 0.933963975

 $00:01:27.450 \longrightarrow 00:01:29.275$ but lymphomas and other so called

NOTE Confidence: 0.933963975

 $00{:}01{:}29.275 \dashrightarrow 00{:}01{:}31.218$ liquid tumors, so lymphoma,

NOTE Confidence: 0.933963975

00:01:31.218 --> 00:01:33.634 myelomas, leukemias are actually

NOTE Confidence: 0.933963975

00:01:33.634 --> 00:01:36.050 exquisitely sensitive to radiation

 $00:01:36.050 \longrightarrow 00:01:39.278$ and so it's another place where

NOTE Confidence: 0.933963975

 $00{:}01{:}39.278 \to 00{:}01{:}40.763$ radiation can actually be helpful.

NOTE Confidence: 0.933963975

00:01:40.770 --> 00:01:42.260 However, even though in general

NOTE Confidence: 0.933963975

 $00:01:42.260 \longrightarrow 00:01:44.145$ these tumors tend to be very

NOTE Confidence: 0.933963975

 $00:01:44.145 \longrightarrow 00:01:45.509$ sensitive for aggressive lymphomas

NOTE Confidence: 0.933963975

 $00:01:45.509 \longrightarrow 00:01:47.705$ that have kind of blown through

NOTE Confidence: 0.933963975

00:01:47.705 --> 00:01:49.437 all the conventional treatments,

NOTE Confidence: 0.933963975

 $00:01:49.440 \longrightarrow 00:01:50.802$ we actually will sometimes even for

NOTE Confidence: 0.933963975

 $00{:}01{:}50.802 \dashrightarrow 00{:}01{:}52.560$ them see that they will actually grow

NOTE Confidence: 0.933963975

 $00:01:52.560 \longrightarrow 00:01:54.174$ through radiation treatment and we don't

NOTE Confidence: 0.933963975

 $00:01:54.174 \longrightarrow 00:01:55.998$ have a good understanding of why that is.

NOTE Confidence: 0.933963975

 $00:01:56.000 \longrightarrow 00:01:58.800$ And so my lab is interested in

NOTE Confidence: 0.933963975

 $00:01:58.800 \longrightarrow 00:02:01.040$ understanding how those tumors

NOTE Confidence: 0.933963975

 $00{:}02{:}01.040 \dashrightarrow 00{:}02{:}03.246$ become resistant to radiation and

NOTE Confidence: 0.933963975

 $00:02:03.246 \longrightarrow 00:02:05.808$ then also how are those tumors becoming

NOTE Confidence: 0.933963975

 $00:02:05.808 \longrightarrow 00:02:08.129$ resistant to some of these new and

 $00:02:08.129 \longrightarrow 00:02:10.174$ these emerging therapies like cellular

NOTE Confidence: 0.933963975

00:02:10.174 --> 00:02:12.720 the rapies like CAR T cell therapy

NOTE Confidence: 0.933963975

 $00:02:12.720 \longrightarrow 00:02:13.980$ that have really kind of

NOTE Confidence: 0.933963975

 $00:02:13.980 \longrightarrow 00:02:15.240$ revolutionized our treatment of these tumors.

NOTE Confidence: 0.933963975

 $00{:}02{:}15.692 \dashrightarrow 00{:}02{:}17.048$ But they still don't always work

NOTE Confidence: 0.933963975

 $00:02:17.048 \longrightarrow 00:02:18.361$ and we're trying to figure out

NOTE Confidence: 0.933963975

 $00:02:18.361 \longrightarrow 00:02:19.591$ ways to make them work better.

NOTE Confidence: 0.9352219

 $00:02:20.760 \longrightarrow 00:02:23.440$ So tell us a bit more about what

NOTE Confidence: 0.9352219

 $00:02:23.440 \longrightarrow 00:02:25.557$ exactly CAR T cell therapy is.

NOTE Confidence: 0.9352219

00:02:25.560 --> 00:02:27.240 I mean some of our audience may

NOTE Confidence: 0.9352219

 $00:02:27.240 \longrightarrow 00:02:29.788$ have heard of it, it seems to be

NOTE Confidence: 0.9352219

 $00:02:29.788 \longrightarrow 00:02:32.073$ something that is fairly novel.

NOTE Confidence: 0.9352219

 $00:02:32.080 \longrightarrow 00:02:33.838$ Many of our audience may know

NOTE Confidence: 0.9352219

00:02:33.840 --> 00:02:36.120 the standard surgery,

NOTE Confidence: 0.9352219

 $00:02:36.120 \longrightarrow 00:02:37.292$ chemotherapy, radiation,

 $00:02:37.292 \longrightarrow 00:02:40.808$ maybe even have heard about immunotherapy.

NOTE Confidence: 0.9352219

 $00{:}02{:}40.810 \dashrightarrow 00{:}02{:}43.042$ But CAR T cell therapy sounds

NOTE Confidence: 0.9352219

 $00:02:43.042 \longrightarrow 00:02:44.530$ really new and interesting.

NOTE Confidence: 0.9352219

 $00{:}02{:}44.530 \dashrightarrow 00{:}02{:}46.555$ So can you tell us a bit more about

NOTE Confidence: 0.9352219

 $00:02:46.555 \longrightarrow 00:02:48.530$ what it is and how it works?

NOTE Confidence: 0.938576366666667

00:02:48.530 --> 00:02:49.730 Well, it is new and interesting,

NOTE Confidence: 0.938576366666667

 $00:02:49.730 \longrightarrow 00:02:51.010$ you're correct.

NOTE Confidence: 0.938576366666667

 $00:02:51.010 \longrightarrow 00:02:53.470$ So CAR T cell therapy,

NOTE Confidence: 0.938576366666667

 $00:02:53.470 \longrightarrow 00:02:55.726$ what it stands for is chimeric

NOTE Confidence: 0.938576366666667

00:02:55.726 --> 00:02:58.109 antigen receptor, T cell therapy.

NOTE Confidence: 0.938576366666667

 $00:02:58.109 \longrightarrow 00:03:01.140$ So chimera meaning a mix and then

NOTE Confidence: 0.938576366666667

 $00:03:01.234 \longrightarrow 00:03:03.538$ antigen receptor is basically what

NOTE Confidence: 0.938576366666667

 $00:03:03.538 \longrightarrow 00:03:05.610$ they've done it's actually very cool.

NOTE Confidence: 0.938576366666667

 $00:03:05.610 \longrightarrow 00:03:07.506$ It almost sounds

NOTE Confidence: 0.938576366666667

00:03:07.506 --> 00:03:08.454 like science fiction.

NOTE Confidence: 0.938576366666667

 $00:03:08.460 \longrightarrow 00:03:10.290$ So what they can do is they can take your

00:03:10.340 --> 00:03:12.216 immune cells, or your T cells specifically,

NOTE Confidence: 0.938576366666667

 $00:03:12.220 \longrightarrow 00:03:14.740$ which is why it's called CAR T cell therapy.

NOTE Confidence: 0.938576366666667

00:03:14.740 --> 00:03:16.324 And your T cells are part of your

NOTE Confidence: 0.938576366666667

00:03:16.324 --> 00:03:17.866 immune system that can recognize of

NOTE Confidence: 0.938576366666667

 $00:03:17.866 \longrightarrow 00:03:19.252$ course foreign antigens, infections,

NOTE Confidence: 0.938576366666667

 $00:03:19.252 \longrightarrow 00:03:21.460$ but also potentially, cancers.

NOTE Confidence: 0.938576366666667

 $00:03:21.460 \longrightarrow 00:03:25.230$ And basically what you can do is

NOTE Confidence: 0.938576366666667

 $00{:}03{:}25.230 \to 00{:}03{:}28.660$ you can take somebody's individual T cells,

NOTE Confidence: 0.938576366666667

 $00{:}03{:}28.660 \dashrightarrow 00{:}03{:}30.774$ so let's say somebody has an aggressive,

NOTE Confidence: 0.938576366666667

 $00{:}03{:}30.780 \longrightarrow 00{:}03{:}32.595$ you know, lymphoma that's grown

NOTE Confidence: 0.938576366666667

 $00{:}03{:}32.595 \dashrightarrow 00{:}03{:}34.410$ through all the chemotherapy treatments

NOTE Confidence: 0.938576366666667

 $00{:}03{:}34.468 \dashrightarrow 00{:}03{:}36.204$ that are kind of standard of care.

NOTE Confidence: 0.938576366666667

 $00:03:36.210 \longrightarrow 00:03:37.086$ And they have this

NOTE Confidence: 0.938576366666667

 $00:03:37.090 \longrightarrow 00:03:38.742$ aggressive lymphoma that's just

NOTE Confidence: 0.938576366666667

 $00:03:38.742 \longrightarrow 00:03:40.494$ not responding for those patients.

 $00:03:40.494 \longrightarrow 00:03:42.650$ CAR T cell therapy has been approved.

NOTE Confidence: 0.938576366666667

 $00{:}03{:}42.650 \longrightarrow 00{:}03{:}44.466$ And what you can do is basically take

NOTE Confidence: 0.938576366666667

00:03:44.466 --> 00:03:46.206 the immune cells out of that patient,

NOTE Confidence: 0.938576366666667

 $00:03:46.210 \longrightarrow 00:03:47.728$ put them in a Petri dish,

NOTE Confidence: 0.938576366666667

00:03:47.730 --> 00:03:49.720 genetically engineer them to go

NOTE Confidence: 0.938576366666667

 $00:03:49.720 \longrightarrow 00:03:52.170$ after markers on those cancer cells,

NOTE Confidence: 0.938576366666667

00:03:52.170 --> 00:03:53.367 kind of have a pep rally in

NOTE Confidence: 0.938576366666667

00:03:53.367 --> 00:03:54.370 the Petri dish

NOTE Confidence: 0.938576366666667

 $00{:}03{:}54.370 \dashrightarrow 00{:}03{:}55.930$ get them good and revved up and

NOTE Confidence: 0.938576366666667

 $00:03:55.930 \longrightarrow 00:03:57.526$ then inject them back into the patients.

NOTE Confidence: 0.938576366666667

 $00:03:57.530 \longrightarrow 00:04:00.086$ And then those CAR T cells

 $00:04:00.580 \longrightarrow 00:04:02.050$ they're chimera because they've now been

 $00:04:02.572 \longrightarrow 00:04:04.138$ put with a specific marker to

NOTE Confidence: 0.938576366666667

00:04:04.138 --> 00:04:05.718 kind of heat sink towards

NOTE Confidence: 0.938576366666667

 $00:04:05.720 \longrightarrow 00:04:06.760$ the cancer cells,

NOTE Confidence: 0.938576366666667

 $00:04:06.760 \longrightarrow 00:04:08.320$ so it's a chimera or mix

NOTE Confidence: 0.938576366666667

 $00:04:08.387 \longrightarrow 00:04:09.717$ of your normal T cells,

 $00:04:09.720 \longrightarrow 00:04:11.250$ but now kind of targeted

NOTE Confidence: 0.938576366666667

 $00:04:11.250 \longrightarrow 00:04:12.474$ towards the cancer cells.

NOTE Confidence: 0.938576366666667

 $00:04:12.480 \longrightarrow 00:04:14.909$ And with that approach we can actually

NOTE Confidence: 0.938576366666667

00:04:14.909 --> 00:04:16.939 cure people who previously really

NOTE Confidence: 0.938576366666667

 $00:04:16.939 \longrightarrow 00:04:19.234$ didn't have any curable options.

NOTE Confidence: 0.938576366666667

00:04:19.240 --> 00:04:20.913 And really what you need is kind

NOTE Confidence: 0.938576366666667

 $00:04:20.913 \longrightarrow 00:04:22.678$ of a specific target to go after.

NOTE Confidence: 0.938576366666667

 $00:04:22.680 \longrightarrow 00:04:24.424$ And this has been a very exciting area

NOTE Confidence: 0.938576366666667

 $00:04:24.424 \longrightarrow 00:04:25.680$ in cancer overall,

NOTE Confidence: 0.938576366666667

 $00{:}04{:}25.680 \to 00{:}04{:}27.425$ but it's been very successful

NOTE Confidence: 0.938576366666667

 $00:04:27.425 \longrightarrow 00:04:29.170$ in pediatric leukemias but also

NOTE Confidence: 0.938576366666667

 $00:04:29.232 \longrightarrow 00:04:30.318$ in adult lymphomas.

NOTE Confidence: 0.938423890909091

 $00{:}04{:}31.640 \dashrightarrow 00{:}04{:}33.548$ But you know when some of

NOTE Confidence: 0.938423890909091

 $00{:}04{:}33.548 \dashrightarrow 00{:}04{:}35.560$ us hear the words lymphoma,

NOTE Confidence: 0.938423890909091

 $00:04:35.560 \longrightarrow 00:04:37.160$ we think about

 $00:04:37.160 \longrightarrow 00:04:39.518$ T cell lymphomas, B cell lymphomas.

NOTE Confidence: 0.938423890909091

 $00:04:39.520 \longrightarrow 00:04:42.460$ So if you're taking people's

NOTE Confidence: 0.938423890909091

 $00:04:42.460 \longrightarrow 00:04:45.726$ T cells out of them

NOTE Confidence: 0.938423890909091

 $00:04:45.726 \longrightarrow 00:04:47.356$ and they have a lymphoma,

NOTE Confidence: 0.938423890909091

 $00:04:47.360 \longrightarrow 00:04:49.640$ especially if they have a T cell lymphoma,

NOTE Confidence: 0.938423890909091

 $00:04:49.640 \longrightarrow 00:04:51.280$ how does that work exactly?

NOTE Confidence: 0.927464051428571

 $00:04:51.880 \longrightarrow 00:04:53.917$ Yeah, sure. So it's a great question.

NOTE Confidence: 0.927464051428571

 $00:04:53.920 \longrightarrow 00:04:55.560$ So the thing is that right now

NOTE Confidence: 0.927464051428571

 $00{:}04{:}55.560 \dashrightarrow 00{:}04{:}57.760$ we're still figuring this out.

NOTE Confidence: 0.927464051428571

00:04:57.760 --> 00:05:00.680 And so right now CAR T cell therapy

NOTE Confidence: 0.927464051428571

 $00{:}05{:}00.680 {\:{\mbox{--}}\!>}\ 00{:}05{:}03.738$ works great for B cell lymphomas because

NOTE Confidence: 0.927464051428571

 $00:05:03.740 \longrightarrow 00:05:06.211$ almost all B cell lymphomas and many

NOTE Confidence: 0.927464051428571

 $00{:}05{:}06.211 \dashrightarrow 00{:}05{:}08.540$ B cell leukemias over-express a very

NOTE Confidence: 0.927464051428571

 $00{:}05{:}08.540 \dashrightarrow 00{:}05{:}11.340$ specific kind of protein on their surface

NOTE Confidence: 0.927464051428571

 $00:05:11.407 \longrightarrow 00:05:13.771$ and it happens to be called CD19 and

NOTE Confidence: 0.927464051428571

 $00:05:13.771 \longrightarrow 00:05:15.619$ that's kind of the bullseye so to speak.

 $00:05:15.620 \longrightarrow 00:05:18.156$ It's a protein that is

NOTE Confidence: 0.927464051428571

 $00:05:18.156 \longrightarrow 00:05:19.440$ over-expressed on malignant

NOTE Confidence: 0.927464051428571

 $00:05:19.440 \longrightarrow 00:05:21.580$ B cells or lymphoma cells,

NOTE Confidence: 0.927464051428571

 $00:05:21.580 \longrightarrow 00:05:22.890$ but not really over-expressed on

NOTE Confidence: 0.927464051428571

 $00:05:22.890 \longrightarrow 00:05:24.500$ any other cells in the body.

NOTE Confidence: 0.927464051428571

 $00:05:24.500 \longrightarrow 00:05:25.886$ And that's the target that the

NOTE Confidence: 0.927464051428571

 $00:05:25.886 \longrightarrow 00:05:27.180$ CAR T cells go after.

NOTE Confidence: 0.927464051428571

00:05:27.180 --> 00:05:28.908 We're trying to figure out how

NOTE Confidence: 0.927464051428571

 $00:05:28.908 \longrightarrow 00:05:31.172$ could we go after T cell lymphomas

NOTE Confidence: 0.927464051428571

00:05:31.172 --> 00:05:32.564 which are very aggressive.

NOTE Confidence: 0.927464051428571

 $00:05:32.570 \longrightarrow 00:05:33.330$ But as you point out,

NOTE Confidence: 0.927464051428571

 $00:05:33.330 \longrightarrow 00:05:34.446$ those don't necessarily have

NOTE Confidence: 0.927464051428571

 $00{:}05{:}34.446 \dashrightarrow 00{:}05{:}36.120$ the same markers and we haven't

NOTE Confidence: 0.927464051428571

 $00{:}05{:}36.172 --> 00{:}05{:}37.570$ cracked that nut so to speak,

NOTE Confidence: 0.927464051428571

 $00:05:37.570 \longrightarrow 00:05:38.818$ but we are trying to figure

00:05:38.818 --> 00:05:40.113 out specific markers on T cell

NOTE Confidence: 0.927464051428571

00:05:40.113 --> 00:05:41.367 lymphomas that might work as well,

NOTE Confidence: 0.927464051428571

00:05:41.370 --> 00:05:42.930 but we haven't figured that out just yet.

NOTE Confidence: 0.937378342857143

 $00:05:43.930 \longrightarrow 00:05:46.322$ And so if you have these T cells

NOTE Confidence: 0.937378342857143

 $00:05:46.322 \longrightarrow 00:05:48.374$ that are going after these markers

NOTE Confidence: 0.937378342857143

 $00:05:48.374 \longrightarrow 00:05:51.170$ on B cells for B cell lymphoma,

NOTE Confidence: 0.939135444444444

00:05:53.490 --> 00:05:57.126 is it true that, it sounds like that's great,

NOTE Confidence: 0.939135444444444

 $00:05:57.130 \longrightarrow 00:05:58.888$ it sounds like you're just kind

NOTE Confidence: 0.939135444444444

 $00:05:58.888 \longrightarrow 00:06:00.500$ of getting your immune system

NOTE Confidence: 0.939135444444444

 $00:06:00.500 \longrightarrow 00:06:04.334$ to go after these cells and kill them off,

NOTE Confidence: 0.939135444444444

 $00:06:04.340 \longrightarrow 00:06:07.098$ some of our audience might get confused

NOTE Confidence: 0.939135444444444

 $00:06:07.098 \longrightarrow 00:06:09.340$ between that and immunotherapy.

NOTE Confidence: 0.939135444444444

 $00:06:09.340 \longrightarrow 00:06:13.615$ Is this a form of immunotherapy and if so,

NOTE Confidence: 0.9391354444444444

 $00:06:13.620 \longrightarrow 00:06:16.889$ does it need to be administered with

NOTE Confidence: 0.939135444444444

 $00:06:16.889 \longrightarrow 00:06:19.156$ chemotherapy as immunotherapies do or is

NOTE Confidence: 0.939135444444444

 $00:06:19.156 \longrightarrow 00:06:21.452$ this something that is just

00:06:21.460 --> 00:06:25.086 your body being revved up and

NOTE Confidence: 0.939135444444444

 $00{:}06{:}25.090 \dashrightarrow 00{:}06{:}27.538$ those T cells having gone to the pep

NOTE Confidence: 0.939135444444444

00:06:27.538 --> 00:06:30.075 rally in the Petri dish, as you say,

NOTE Confidence: 0.939135444444444

00:06:30.075 --> 00:06:32.290 just going out there and doing their job?

NOTE Confidence: 0.9452853

 $00:06:33.290 \longrightarrow 00:06:35.190$ Typically when we

NOTE Confidence: 0.9452853

 $00:06:35.190 \longrightarrow 00:06:36.658$ give this therapy, yeah,

NOTE Confidence: 0.9452853

 $00:06:36.658 \longrightarrow 00:06:39.282$ the conditioning so to speak is

NOTE Confidence: 0.9452853

 $00:06:39.290 \longrightarrow 00:06:41.486$ it's not given alongside

NOTE Confidence: 0.9452853

 $00:06:41.490 \longrightarrow 00:06:43.450$ cytotoxic chemotherapy or other agents.

NOTE Confidence: 0.9452853

 $00:06:43.450 \longrightarrow 00:06:45.370$ It really is kind of expected to act

NOTE Confidence: 0.9452853

 $00{:}06{:}45.370 \dashrightarrow 00{:}06{:}48.158$ on its own and that's what they

NOTE Confidence: 0.9452853

 $00:06:48.158 \longrightarrow 00:06:50.186$ call lympho depleting chemotherapy.

NOTE Confidence: 0.9452853

 $00{:}06{:}50.190 \dashrightarrow 00{:}06{:}52.310$ So what they will do is give you about 3

NOTE Confidence: 0.9452853

 $00:06:52.372 \longrightarrow 00:06:54.382$ days typically worth of chemotherapy that

NOTE Confidence: 0.9452853

00:06:54.382 --> 00:06:56.790 will kind of suppress your immune system,

 $00:06:56.790 \longrightarrow 00:06:58.896$ get your T cells that are there to kind

NOTE Confidence: 0.9452853

 $00:06:58.896 \longrightarrow 00:07:01.029$ of calm down and get out of the way.

NOTE Confidence: 0.9452853

 $00:07:01.030 \longrightarrow 00:07:02.577$ And then two days later they go

NOTE Confidence: 0.9452853

 $00:07:02.577 \longrightarrow 00:07:04.254$ ahead and inject the CAR T cells and

NOTE Confidence: 0.9452853

 $00:07:04.254 \longrightarrow 00:07:05.868$ they really do kind of on their own

NOTE Confidence: 0.9452853

 $00:07:05.870 \longrightarrow 00:07:07.388$ basically

NOTE Confidence: 0.9452853

 $00:07:07.390 \longrightarrow 00:07:09.829$ do the job of getting rid of the cancer.

NOTE Confidence: 0.9452853

 $00:07:09.830 \longrightarrow 00:07:11.972$ So on one hand it is the

NOTE Confidence: 0.9452853

 $00{:}07{:}11.972 \dashrightarrow 00{:}07{:}14.068$ immune system going after the cancer,

NOTE Confidence: 0.9452853

 $00:07:14.070 \longrightarrow 00:07:17.304$ but on the other hand we kind of tend

NOTE Confidence: 0.9452853

00:07:17.304 --> 00:07:18.228 to distinguish

NOTE Confidence: 0.9452853

 $00:07:18.230 \longrightarrow 00:07:19.970$ CAR T is cellular therapies

NOTE Confidence: 0.9452853

00:07:19.970 --> 00:07:21.710 because you're taking cells out,

NOTE Confidence: 0.9452853

 $00:07:21.710 \longrightarrow 00:07:23.058$ you know genetic engineering

NOTE Confidence: 0.9452853

 $00:07:23.058 \longrightarrow 00:07:24.743$ then putting them back in.

NOTE Confidence: 0.9452853

 $00:07:24.750 \longrightarrow 00:07:26.304$ And so we tend to call those

00:07:26.304 --> 00:07:26.748 cellular therapies.

NOTE Confidence: 0.9452853

 $00:07:26.750 \longrightarrow 00:07:27.590$ But I mean it really is

NOTE Confidence: 0.9452853

 $00:07:27.590 \longrightarrow 00:07:29.238$ splitting hairs a little bit

NOTE Confidence: 0.9452853

 $00:07:29.238 \longrightarrow 00:07:30.728$ because it is still the immune system

NOTE Confidence: 0.9452853

 $00{:}07{:}30.728 \dashrightarrow 00{:}07{:}32.270$ being used to go after the cancer.

NOTE Confidence: 0.9364797575

 $00:07:32.850 \longrightarrow 00:07:36.370$ Yeah. So I mean, it sounds really cool,

NOTE Confidence: 0.9364797575

00:07:36.370 --> 00:07:38.914 right? And it sounds like that would be

NOTE Confidence: 0.9364797575

 $00:07:38.914 \longrightarrow 00:07:42.170$ something that would be the ideal.

NOTE Confidence: 0.9364797575

 $00:07:42.170 \longrightarrow 00:07:44.753$ Here is one of the cells in your

NOTE Confidence: 0.9364797575

 $00:07:44.753 \longrightarrow 00:07:47.565$ body that has gone awry and created a cancer.

NOTE Confidence: 0.9364797575

00:07:47.570 --> 00:07:50.538 And now all you're doing is you're kind

NOTE Confidence: 0.9364797575

 $00{:}07{:}50.538 \dashrightarrow 00{:}07{:}53.459$ of helping your body to target

NOTE Confidence: 0.9364797575

 $00{:}07{:}53.459 \dashrightarrow 00{:}07{:}55.720$ those cancerous cells and fight them

NOTE Confidence: 0.9364797575

 $00:07:55.720 \longrightarrow 00:07:58.769$ off just like they were designed to do.

NOTE Confidence: 0.9364797575

 $00:07:58.770 \longrightarrow 00:08:00.450$ So what's the downside?

 $00:08:00.450 \longrightarrow 00:08:02.474$ I mean are there

NOTE Confidence: 0.9364797575

 $00:08:02.474 \longrightarrow 00:08:06.618$ side effects to CAR T cell therapy

NOTE Confidence: 0.9364797575

 $00:08:06.620 \longrightarrow 00:08:08.978$ and what about the financial cost?

NOTE Confidence: 0.939247156

 $00:08:09.380 \longrightarrow 00:08:10.980$ Sure, these are all

NOTE Confidence: 0.939247156

 $00:08:10.980 \longrightarrow 00:08:12.580$ good points and

 $00:08:14.820 \longrightarrow 00:08:16.060$ first and foremost,

NOTE Confidence: 0.939247156

 $00:08:16.060 \longrightarrow 00:08:18.340$ it doesn't work all the time.

NOTE Confidence: 0.939247156

 $00:08:18.340 \longrightarrow 00:08:20.260$ So for patients with

NOTE Confidence: 0.939247156

00:08:20.260 --> 00:08:21.532 relapse refractory aggressive lymphomas,

NOTE Confidence: 0.939247156

00:08:21.532 --> 00:08:23.122 we're trying to figure out

NOTE Confidence: 0.939247156

 $00:08:23.122 \longrightarrow 00:08:24.499$ ways to make it work better.

NOTE Confidence: 0.939247156

 $00:08:24.500 \longrightarrow 00:08:26.138$ But for those patients

NOTE Confidence: 0.939247156

 $00{:}08{:}26.140 \dashrightarrow 00{:}08{:}27.928$ their cure rates are quite low.

NOTE Confidence: 0.939247156

 $00:08:27.930 \longrightarrow 00:08:29.210$ With CAR T cell therapy,

NOTE Confidence: 0.939247156

 $00:08:29.210 \longrightarrow 00:08:30.785$ we appear to be getting about a

NOTE Confidence: 0.939247156

 $00:08:30.785 \longrightarrow 00:08:32.242 40\%$ durable response,

 $00:08:32.242 \longrightarrow 00:08:34.090$ which you could kind of call

NOTE Confidence: 0.939247156

 $00{:}08{:}34.149 \dashrightarrow 00{:}08{:}35.800$ a cure for those patients.

NOTE Confidence: 0.939247156

 $00:08:35.800 \longrightarrow 00:08:37.450$ And so it's not perfect.

NOTE Confidence: 0.939247156

00:08:37.450 --> 00:08:38.800 It doesn't work for everybody and

NOTE Confidence: 0.939247156

 $00:08:38.800 \longrightarrow 00:08:39.907$ that's what we're actually trying

NOTE Confidence: 0.939247156

 $00:08:39.907 \longrightarrow 00:08:41.083$ to do is to make that better so

NOTE Confidence: 0.939247156

00:08:41.090 --> 00:08:41.934 that it does cure everybody,

00:08:42.570 --> 00:08:44.411 but 40 percent is a pretty good

NOTE Confidence: 0.939247156

00:08:44.411 --> 00:08:45.970 number when you're talking about

NOTE Confidence: 0.939247156

 $00:08:45.970 \longrightarrow 00:08:48.754$ a setting where almost

NOTE Confidence: 0.939247156

 $00:08:48.754 \longrightarrow 00:08:50.610$ nothing else works well.

NOTE Confidence: 0.939247156

00:08:50.610 --> 00:08:52.686 And 2nd, in terms of toxicity,

NOTE Confidence: 0.939247156

00:08:52.690 --> 00:08:55.600 first of all, the biologic toxicity,

 $00:08:55.964 \longrightarrow 00:08:57.420$ so one of the things that can happen

NOTE Confidence: 0.939247156

 $00:08:57.468 \longrightarrow 00:08:58.910$ is that there are some

NOTE Confidence: 0.939247156

 $00:08:58.910 \longrightarrow 00:09:00.228$ patients it actually is similar to

NOTE Confidence: 0.939247156

 $00:09:00.228 \longrightarrow 00:09:01.536$ immune the rapy in that some patients

00:09:01.536 --> 00:09:03.116 will just sail right through it

NOTE Confidence: 0.939247156

 $00:09:03.116 \longrightarrow 00:09:04.560$ and won't even bat an eye.

NOTE Confidence: 0.939247156

 $00:09:04.560 \longrightarrow 00:09:06.877$ But then some patients can have dramatic

NOTE Confidence: 0.939247156

 $00:09:06.877 \longrightarrow 00:09:09.152$ side effects or toxicities and they

NOTE Confidence: 0.939247156

 $00:09:09.152 \longrightarrow 00:09:11.680$ tend to be self limited which is good.

NOTE Confidence: 0.939247156

00:09:11.680 --> 00:09:13.409 And the biggest one that we worry

NOTE Confidence: 0.939247156

 $00:09:13.409 \longrightarrow 00:09:15.466$ about with CAR T cell therapy is

NOTE Confidence: 0.939247156

 $00:09:15.466 \longrightarrow 00:09:17.036$ this thing called cytokine release

NOTE Confidence: 0.939247156

00:09:17.036 --> 00:09:18.520 syndrome or CRS and what that is,

 $00:09:19.484 \longrightarrow 00:09:21.176$ we've taken these T cells and

NOTE Confidence: 0.939247156

 $00{:}09{:}21.176 \dashrightarrow 00{:}09{:}23.240$ thrown a PEP rally inject them in

NOTE Confidence: 0.939247156

 $00:09:23.240 \longrightarrow 00:09:24.402$ and then they see a lot of

NOTE Confidence: 0.939247156

 $00:09:24.402 \longrightarrow 00:09:25.638$ tumor and they get real excited.

 $00{:}09{:}25.975 \dashrightarrow 00{:}09{:}28.320$ Your immune system when it revs up

NOTE Confidence: 0.939247156

 $00{:}09{:}28.320 \dashrightarrow 00{:}09{:}30.567$ can secrete a lot of cytokines and

NOTE Confidence: 0.939247156

00:09:30.567 --> 00:09:32.452 sometimes it's such a powerful kind

 $00:09:32.452 \longrightarrow 00:09:34.883$ of storm of cytokines that it can

NOTE Confidence: 0.939247156

 $00{:}09{:}34.883 \dashrightarrow 00{:}09{:}36.718$ actually cause a severe toxicity.

NOTE Confidence: 0.939247156

00:09:36.720 --> 00:09:38.940 Probably the most feared toxicity is

NOTE Confidence: 0.939247156

 $00:09:38.940 \longrightarrow 00:09:41.432$ something called ICANS or this kind

NOTE Confidence: 0.939247156

 $00:09:41.432 \longrightarrow 00:09:45.144$ of neurologic toxicity where it can

NOTE Confidence: 0.939247156

 $00:09:45.144 \longrightarrow 00:09:48.168$ actually result in something as severe as

NOTE Confidence: 0.939247156

 $00:09:48.170 \longrightarrow 00:09:49.745$ not being able to talk

NOTE Confidence: 0.939247156

00:09:49.745 --> 00:09:51.224 or even being temporarily paralyzed

NOTE Confidence: 0.939247156

 $00:09:51.224 \longrightarrow 00:09:52.988$ like a kind of Guillain Barre

NOTE Confidence: 0.939247156

 $00:09:52.988 \longrightarrow 00:09:54.609$ type syndrome in the hospital.

NOTE Confidence: 0.939247156

 $00:09:54.610 \longrightarrow 00:09:56.338$ And that happens

NOTE Confidence: 0.939247156

00:09:56.338 --> 00:09:57.202 actually not infrequently,

NOTE Confidence: 0.939247156

 $00:09:57.210 \longrightarrow 00:09:59.569$ it varies by the exact cellular product.

NOTE Confidence: 0.939247156

00:09:59.570 --> 00:10:01.260 But I mean in some of the products

NOTE Confidence: 0.939247156

 $00:10:01.260 \longrightarrow 00:10:02.976$ that can be as high as 30% rate

NOTE Confidence: 0.939247156

00:10:02.976 --> 00:10:04.698 of having a toxicity so bad that

00:10:04.698 --> 00:10:06.358 people can temporarily be

NOTE Confidence: 0.939247156

 $00:10:06.358 \longrightarrow 00:10:08.284$ stuck in the hospital not able to

NOTE Confidence: 0.939247156

 $00:10:08.284 \longrightarrow 00:10:10.122$ speak and the vast

NOTE Confidence: 0.939247156

 $00{:}10{:}10.122 \dashrightarrow 00{:}10{:}11.909$ majority of those are self limited

NOTE Confidence: 0.939247156

 $00:10:11.909 \longrightarrow 00:10:13.829$ and go away with close monitoring.

NOTE Confidence: 0.939247156

 $00:10:13.830 \longrightarrow 00:10:15.230$ But there

NOTE Confidence: 0.939247156

 $00:10:15.230 \longrightarrow 00:10:17.120$ certainly is a potential

NOTE Confidence: 0.939247156

 $00:10:17.120 \longrightarrow 00:10:19.010$ for real toxicity especially in

NOTE Confidence: 0.939247156

 $00:10:19.073 \dashrightarrow 00:10:20.363$ the acute setting chronically.

NOTE Confidence: 0.939247156

 $00:10:20.363 \longrightarrow 00:10:21.881$ So far, again, we don't have

NOTE Confidence: 0.939247156

 $00:10:21.881 \longrightarrow 00:10:23.149$ super long term follow up,

NOTE Confidence: 0.939247156

 $00:10:23.150 \longrightarrow 00:10:26.030$ but these patients seem to do well long term.

NOTE Confidence: 0.939247156

00:10:26.030 --> 00:10:28.310 It really is kind of that acute window.

NOTE Confidence: 0.939247156

 $00:10:28.310 \longrightarrow 00:10:30.949$ And then lastly on the financial toxicity,

NOTE Confidence: 0.939247156

 $00:10:30.950 \longrightarrow 00:10:32.427$ you know this is an expensive therapy,

 $00:10:32.430 \longrightarrow 00:10:34.272$ the number that I've heard cited

NOTE Confidence: 0.939247156

 $00:10:34.272 \longrightarrow 00:10:35.500$ most often because obviously

NOTE Confidence: 0.95283285

 $00:10:35.555 \longrightarrow 00:10:37.150$ our healthcare systems are complex

NOTE Confidence: 0.95283285

 $00:10:37.150 \longrightarrow 00:10:39.864$ and opaque and can

NOTE Confidence: 0.95283285

00:10:39.864 --> 00:10:41.820 be very difficult to navigate,

NOTE Confidence: 0.95283285

 $00:10:41.820 \longrightarrow 00:10:43.434$ but around \$400,000 is

NOTE Confidence: 0.95283285

 $00:10:43.434 \longrightarrow 00:10:45.170$ the number that I've heard.

NOTE Confidence: 0.95283285

 $00:10:45.170 \longrightarrow 00:10:47.739$ Holy Dinah.

NOTE Confidence: 0.95283285

 $00{:}10{:}47.740 --> 00{:}10{:}49.360$ Yeah, holy Dinah.

NOTE Confidence: 0.95283285

 $00:10:49.360 \longrightarrow 00:10:51.790$ And that's obviously

NOTE Confidence: 0.95283285

00:10:51.867 --> 00:10:53.457 a very high price tag.

NOTE Confidence: 0.95283285

 $00:10:53.460 \longrightarrow 00:10:55.416$ So insurance clearance is of importance.

NOTE Confidence: 0.95283285

 $00:10:55.420 \longrightarrow 00:10:57.524$ I mean the good news is that insurance

NOTE Confidence: 0.95283285

 $00:10:57.524 \longrightarrow 00:10:59.524$ does cover this and approve it when

NOTE Confidence: 0.95283285

 $00:10:59.524 \longrightarrow 00:11:01.289$ it's appropriate and the FDA approvals

NOTE Confidence: 0.95283285

 $00:11:01.289 \longrightarrow 00:11:03.291$ have kind of been moving up

00:11:03.291 --> 00:11:05.765 as appropriate

NOTE Confidence: 0.95283285

 $00:11:05.765 \longrightarrow 00:11:07.950$ for patients with bad disease.

NOTE Confidence: 0.95283285

 $00:11:07.950 \longrightarrow 00:11:09.024$ But that's the thing

NOTE Confidence: 0.95283285

 $00:11:09.024 \longrightarrow 00:11:09.950$ with cancer care these days.

NOTE Confidence: 0.95283285

 $00:11:09.950 \longrightarrow 00:11:11.630$ You could do a whole segment.

NOTE Confidence: 0.95283285

 $00:11:11.630 \longrightarrow 00:11:12.782$ I'm sure you've done many segments

NOTE Confidence: 0.95283285

 $00:11:12.782 \longrightarrow 00:11:14.070$ on the cost of cancer care,

NOTE Confidence: 0.95283285

 $00{:}11{:}14.070 \dashrightarrow 00{:}11{:}15.510$ which is a rapidly moving target.

NOTE Confidence: 0.95283285

00:11:15.510 --> 00:11:17.590 So you know, on the one hand you could say,

NOTE Confidence: 0.95283285

00:11:17.590 --> 00:11:19.746 oh my gosh, \$400,000, this is crazy,

NOTE Confidence: 0.95283285

00:11:19.750 --> 00:11:21.470 how is this ever going to be a real solution?

NOTE Confidence: 0.95283285

00:11:21.470 --> 00:11:22.990 We should just abandon this.

NOTE Confidence: 0.95283285

00:11:22.990 --> 00:11:24.382 But I would also say that

NOTE Confidence: 0.95283285

 $00:11:24.382 \longrightarrow 00:11:25.310$ technology improves over time.

NOTE Confidence: 0.95283285

 $00:11:25.310 \longrightarrow 00:11:26.106$ And so NOTE Confidence: 0.95283285

 $00:11:26.106 \longrightarrow 00:11:27.590$ as we get better at doing this, we

00:11:27.590 --> 00:11:29.466 figure out cheaper ways to do it,

NOTE Confidence: 0.95283285

 $00{:}11{:}29.470 \dashrightarrow 00{:}11{:}31.166$ I think that will be a natural thing

NOTE Confidence: 0.95283285

 $00:11:31.166 \longrightarrow 00:11:32.787$ that will kind of evolve over time.

NOTE Confidence: 0.95283285

00:11:32.790 --> 00:11:34.160 Right now we're just excited

NOTE Confidence: 0.95283285

00:11:34.160 --> 00:11:35.960 to be curing folks who before

NOTE Confidence: 0.95283285

 $00:11:36.140 \longrightarrow 00:11:37.400$ we're kind of carrying a death sentence.

 $00:11:39.720 \longrightarrow 00:11:42.087$ I just have to take a

NOTE Confidence: 0.931028753333333

00:11:42.087 --> 00:11:45.212 breath at that, nearly half,

NOTE Confidence: 0.931028753333333

00:11:45.212 --> 00:11:48.077 \$1,000,000 price tag for the rapy,

NOTE Confidence: 0.931028753333333

 $00:11:48.080 \longrightarrow 00:11:50.190$ especially when you say that

NOTE Confidence: 0.931028753333333

 $00:11:50.190 \longrightarrow 00:11:51.878$ it doesn't always work.

NOTE Confidence: 0.931028753333333

 $00:11:51.880 \longrightarrow 00:11:56.888$ So how often does it not work and

NOTE Confidence: 0.931028753333333

 $00:11:56.890 \longrightarrow 00:11:58.490$ what do you do then?

NOTE Confidence: 0.931028753333333

 $00{:}11{:}58.490 \to 00{:}12{:}00.450$ Is this something that you then repeat,

NOTE Confidence: 0.931028753333333

00:12:00.450 --> 00:12:03.969 so multiple courses of CAR T cell therapy at,

NOTE Confidence: 0.931028753333333

00:12:03.970 --> 00:12:06.490 you know, \$400,000 a pop?

 $00:12:06.490 \longrightarrow 00:12:09.130$ And if so, how many times do you do that?

NOTE Confidence: 0.924439685714286

 $00:12:09.730 \longrightarrow 00:12:11.249$ Yeah, so to be

NOTE Confidence: 0.94137175555556

 $00:12:11.250 \longrightarrow 00:12:12.535$ honest, I think it's important

NOTE Confidence: 0.94137175555556

 $00:12:12.535 \longrightarrow 00:12:13.850$ to keep in mind,

NOTE Confidence: 0.94137175555556

 $00:12:13.850 \longrightarrow 00:12:15.410$ it's easy to kind of talk about this

NOTE Confidence: 0.949198844444445 00:12:16.170 --> 00:12:17.103 academically,

NOTE Confidence: 0.949198844444445

00:12:17.103 --> 00:12:18.969 which is great and very important.

NOTE Confidence: 0.94919884444445

00:12:18.970 --> 00:12:20.293 But I'll give you kind of an

NOTE Confidence: 0.94919884444445

 $00:12:20.293 \longrightarrow 00:12:21.647$ example of a case that I saw,

NOTE Confidence: 0.94919884444445

 $00:12:21.650 \longrightarrow 00:12:24.000$ one of the earlier cases.

NOTE Confidence: 0.949198844444445

 $00:12:24.000 \longrightarrow 00:12:25.880$ I had a gentleman who had been referred

NOTE Confidence: 0.94919884444445

 $00{:}12{:}25.880 \rightarrow 00{:}12{:}27.840$ to the Cancer Center I was at where

NOTE Confidence: 0.949198844444445

00:12:27.840 --> 00:12:29.508 I'd actually started out at

NOTE Confidence: 0.94919884444445

 $00{:}12{:}29.508 \dashrightarrow 00{:}12{:}31.110$ Moffitt Cancer Center before I came

NOTE Confidence: 0.949198844444445

 $00:12:31.110 \longrightarrow 00:12:32.664$ to Yale who happened to do

00:12:32.664 --> 00:12:34.280 some of the first CAR T therapies.

NOTE Confidence: 0.94919884444445

 $00:12:34.280 \longrightarrow 00:12:35.358$ And so they're a big center there.

NOTE Confidence: 0.94919884444445

00:12:35.360 --> 00:12:37.808 And anyway, this was in the early days

NOTE Confidence: 0.94919884444445

 $00{:}12{:}37.808 \dashrightarrow 00{:}12{:}41.438$ around 2018 and I had a gentleman with

NOTE Confidence: 0.94919884444445

 $00:12:41.440 \longrightarrow 00:12:43.533$ a diffuse source B cell lymphoma that

NOTE Confidence: 0.94919884444445

 $00:12:43.533 \longrightarrow 00:12:45.518$ had been through 6 lines of therapy.

NOTE Confidence: 0.94919884444445

 $00:12:45.520 \longrightarrow 00:12:46.584$ And I don't know the price tags

NOTE Confidence: 0.94919884444445

 $00:12:46.584 \longrightarrow 00:12:47.918$ of all the therapies he went through,

NOTE Confidence: 0.949198844444445

 $00:12:47.920 \longrightarrow 00:12:49.200$ but they weren't small either.

NOTE Confidence: 0.94919884444445

00:12:49.200 --> 00:12:51.200 Chemotherapy, rituximab,

NOTE Confidence: 0.94919884444445

 $00{:}12{:}51.200 \dashrightarrow 00{:}12{:}53.336$ he had a stem cell transplant.

NOTE Confidence: 0.949198844444445

 $00:12:53.340 \longrightarrow 00:12:55.518$ Two rounds of radiation and his

NOTE Confidence: 0.949198844444445

00:12:55.518 --> 00:12:57.778 cancer kept coming back,

00:12:59.620 --> 00:13:01.436 and it kept on coming back to the

NOTE Confidence: 0.94919884444445

 $00:13:01.436 \longrightarrow 00:13:03.046$ point that actually it caused his

NOTE Confidence: 0.949198844444445

00:13:03.046 --> 00:13:04.989 leg to necrose and he actually had

 $00:13:04.989 \longrightarrow 00:13:06.690$ to have an amputation

NOTE Confidence: 0.949198844444445

 $00:13:06.690 \longrightarrow 00:13:08.551$ from the lymphoma attacking it.

NOTE Confidence: 0.949198844444445

 $00:13:08.551 \longrightarrow 00:13:12.404$ And that's when I met him and

NOTE Confidence: 0.94919884444445

 $00:13:12.404 \longrightarrow 00:13:14.612$ so he came to see me,

NOTE Confidence: 0.949198844444445

 $00:13:14.620 \longrightarrow 00:13:15.495$ we did a little bit of chemo,

00:13:16.913 --> 00:13:19.257 got in the car T and he actually

NOTE Confidence: 0.94919884444445

 $00:13:19.257 \longrightarrow 00:13:21.343$ was able to survive for another

NOTE Confidence: 0.94919884444445

 $00:13:21.343 \longrightarrow 00:13:22.727$ two years cancer free.

NOTE Confidence: 0.949198844444445

 $00:13:22.730 \longrightarrow 00:13:24.319$ With the approach of radiation to

NOTE Confidence: 0.94919884444445

00:13:24.319 --> 00:13:26.162 kind of get him through that danger

NOTE Confidence: 0.94919884444445

 $00:13:26.162 \longrightarrow 00:13:27.824$ zone to temporarily control the tumor

NOTE Confidence: 0.949198844444445

 $00:13:27.879 \longrightarrow 00:13:29.607$ and then get the CAR T cell therapy.

NOTE Confidence: 0.94919884444445

00:13:29.610 --> 00:13:32.330 So kind of miraculous but

NOTE Confidence: 0.949198844444445 00:13:32.330 --> 00:13:34.538 I think that NOTE Confidence: 0.949198844444445

 $00:13:34.538 \longrightarrow 00:13:36.010$ it's just when you're faced with these cases,

NOTE Confidence: 0.949198844444445

 $00:13:36.010 \longrightarrow 00:13:37.050$ I mean the NOTE Confidence: 0.949198844444445

 $00:13:37.050 \longrightarrow 00:13:38.890$ cold truth is that if you have a

 $00:13:38.890 \longrightarrow 00:13:40.716$ really refractory disease that's life

NOTE Confidence: 0.94919884444445

00:13:40.716 --> 00:13:42.768 threatening and if you don't fix it,

NOTE Confidence: 0.94919884444445

 $00{:}13{:}42.770 \dashrightarrow 00{:}13{:}44.170$ I mean the alternative is death.

NOTE Confidence: 0.949198844444445

00:13:47.565 --> 00:13:48.904 and that's why we're really working

NOTE Confidence: 0.94919884444445

 $00:13:48.904 \longrightarrow 00:13:50.544$ to try and provide potentially

NOTE Confidence: 0.94919884444445

 $00:13:50.544 \longrightarrow 00:13:53.540$ curative options for these patients.

NOTE Confidence: 0.94919884444445

 $00:13:53.540 \longrightarrow 00:13:55.500$ And happy to speak on that more.

NOTE Confidence: 0.949198844444445

 $00{:}13{:}55.500 \dashrightarrow 00{:}13{:}57.804$ I mean costs in the medical system is

NOTE Confidence: 0.94919884444445

 $00:13:57.804 \longrightarrow 00:14:00.293$ a whole ball of wax and I agree it's

NOTE Confidence: 0.949198844444445

 $00{:}14{:}00.293 \mathrel{--}{>} 00{:}14{:}02.012$ a high price tag and I think that's

NOTE Confidence: 0.949198844444445

 $00:14:02.012 \longrightarrow 00:14:03.020$ something we'll move in the future.

NOTE Confidence: 0.949198844444445 00:14:03.020 --> 00:14:03.820 But it's NOTE Confidence: 0.949198844444445

 $00{:}14{:}03.820 \dashrightarrow 00{:}14{:}05.339$ a whole other topic of discussion.

NOTE Confidence: 0.939338745454545

00:14:05.940 --> 00:14:08.670 Certainly, I mean I think

NOTE Confidence: 0.939338745454545

00:14:08.670 --> 00:14:11.724 that CAR T therapy has its place.

 $00:14:11.724 \longrightarrow 00:14:14.580$ We're going to learn more on the

NOTE Confidence: 0.939338745454545

 $00:14:14.672 \longrightarrow 00:14:17.276$ other side of the break about

NOTE Confidence: 0.939338745454545

 $00:14:17.280 \longrightarrow 00:14:19.352$ how it could fall short and some of

NOTE Confidence: 0.939338745454545

 $00:14:19.352 \longrightarrow 00:14:21.503$ the work that you've been doing to

NOTE Confidence: 0.939338745454545

00:14:21.503 --> 00:14:23.435 kind of improve outcomes in those

NOTE Confidence: 0.939338745454545

 $00{:}14{:}23.435 \dashrightarrow 00{:}14{:}25.277$ patients right after we take a

NOTE Confidence: 0.939338745454545

00:14:25.277 --> 00:14:27.145 short break for a medical minute.

NOTE Confidence: 0.939338745454545

 $00{:}14{:}27.145 \dashrightarrow 00{:}14{:}29.035$ Please stay tuned to learn more

NOTE Confidence: 0.939338745454545

 $00:14:29.035 \longrightarrow 00:14:31.000$ with my guest Dr. Tim Robinson.

NOTE Confidence: 0.89472673

00:14:31.640 --> 00:14:34.046 Funding for Yale Cancer Answers comes

NOTE Confidence: 0.89472673

 $00{:}14{:}34.046 \dashrightarrow 00{:}14{:}36.224$ from Smilow Cancer Hospital where

NOTE Confidence: 0.89472673

 $00:14:36.224 \longrightarrow 00:14:38.734$ their oncoder matology program treats

NOTE Confidence: 0.89472673

 $00:14:38.734 \longrightarrow 00:14:40.742$ dermatologic concerns including very

NOTE Confidence: 0.89472673

 $00:14:40.808 \longrightarrow 00:14:43.200$ dry skin itching and skin changes that

NOTE Confidence: 0.89472673

 $00:14:43.200 \longrightarrow 00:14:45.400$ arise as side effects from chemotherapy.

NOTE Confidence: 0.9301903

 $00:14:47.510 \longrightarrow 00:14:50.142$ Smilowcancerhospital.org. Genetic

 $00:14:50.142 \longrightarrow 00:14:52.014$ testing can be useful for people

NOTE Confidence: 0.9301903

 $00:14:52.014 \longrightarrow 00:14:53.799$ with certain types of cancer that

NOTE Confidence: 0.9301903

 $00:14:53.799 \longrightarrow 00:14:55.383$ seem to run in their families.

NOTE Confidence: 0.9301903

 $00:14:55.390 \longrightarrow 00:14:57.682$ Genetic counseling is a process that

NOTE Confidence: 0.9301903

 $00:14:57.682 \longrightarrow 00:14:59.671$ includes collecting a detailed personal

NOTE Confidence: 0.9301903

00:14:59.671 --> 00:15:02.214 and family history, a risk assessment,

NOTE Confidence: 0.9301903

 $00:15:02.214 \longrightarrow 00:15:05.350$ and a discussion of genetic testing options.

NOTE Confidence: 0.9301903

 $00:15:05.350 \longrightarrow 00:15:07.958$ Only about 5 to 10% of all cancers

NOTE Confidence: 0.9301903

 $00{:}15{:}07.958 \rightarrow 00{:}15{:}09.923$ are inherited, and genetic testing

NOTE Confidence: 0.9301903

 $00:15:09.923 \longrightarrow 00:15:12.078$ is not recommended for everyone.

NOTE Confidence: 0.9301903

 $00:15:12.080 \longrightarrow 00:15:14.396$ Individuals who have a personal and

NOTE Confidence: 0.9301903

 $00:15:14.396 \longrightarrow 00:15:16.457$ or family history that includes

NOTE Confidence: 0.9301903

 $00{:}15{:}16.457 \dashrightarrow 00{:}15{:}18.677$ cancer at unusually early ages,

NOTE Confidence: 0.9301903

 $00{:}15{:}18.680 \dashrightarrow 00{:}15{:}20.684$ Multiple relatives on the same side

NOTE Confidence: 0.9301903

 $00:15:20.684 \longrightarrow 00:15:23.078$ of the family with the same cancer,

 $00:15:23.080 \longrightarrow 00:15:25.740$ more than one diagnosis of cancer in

NOTE Confidence: 0.9301903

 $00{:}15{:}25.740 \dashrightarrow 00{:}15{:}27.682$ the same individual, rare cancers,

NOTE Confidence: 0.9301903

 $00:15:27.682 \longrightarrow 00:15:30.489$ or family history of a known altered

NOTE Confidence: 0.9301903

 $00:15:30.489 \longrightarrow 00:15:33.000$ cancer predisposing gene could be

NOTE Confidence: 0.9301903

 $00:15:33.000 \longrightarrow 00:15:35.040$ candidates for genetic testing.

NOTE Confidence: 0.9301903

 $00:15:35.040 \longrightarrow 00:15:37.030$ Resources for genetic counseling and

NOTE Confidence: 0.9301903

 $00:15:37.030 \longrightarrow 00:15:39.020$ testing are available at federally

NOTE Confidence: 0.9301903

00:15:39.084 --> 00:15:41.328 designated comprehensive Cancer centers

NOTE Confidence: 0.9301903

00:15:41.330 --> 00:15:43.466 such as Yale Cancer Center and

NOTE Confidence: 0.9301903

00:15:43.466 --> 00:15:44.890 Smilow Cancer Hospital.

NOTE Confidence: 0.9301903

 $00:15:44.890 \longrightarrow 00:15:47.258$ More information is available

NOTE Confidence: 0.9301903

 $00{:}15{:}47.258 \dashrightarrow 00{:}15{:}48.284$ at yale cancercenter.org.

NOTE Confidence: 0.9301903

 $00:15:48.284 \longrightarrow 00:15:50.888$ You're listening to Connecticut Public Radio.

NOTE Confidence: 0.950316926666667

 $00:15:51.610 \longrightarrow 00:15:53.566$ Welcome back to Yale Cancer Answers.

NOTE Confidence: 0.950316926666667

 $00:15:53.570 \longrightarrow 00:15:55.130$ This is Dr. Anees Chagpar

NOTE Confidence: 0.950316926666667

 $00:15:55.130 \longrightarrow 00:15:57.781$ and I'm joined tonight by my guest, Dr.

 $00:15:57.781 \longrightarrow 00:15:58.603$ Tim Robinson.

NOTE Confidence: 0.950316926666667

 $00:15:58.603 \longrightarrow 00:16:00.658$ We're talking about improving outcomes

NOTE Confidence: 0.950316926666667

 $00:16:00.658 \longrightarrow 00:16:03.327$ for patients undergoing CAR T cell therapy.

NOTE Confidence: 0.950316926666667

 $00:16:03.330 \longrightarrow 00:16:05.830$ And for those of you who are just joining us,

NOTE Confidence: 0.950316926666667

 $00:16:05.830 \longrightarrow 00:16:07.346$ right before the break,

NOTE Confidence: 0.950316926666667

 $00:16:07.346 \longrightarrow 00:16:09.241$ we were talking about this

NOTE Confidence: 0.950316926666667

00:16:09.241 --> 00:16:10.750 fairly novel treatment,

NOTE Confidence: 0.950316926666667

00:16:10.750 --> 00:16:14.350 cellular therapy with CAR T cells,

NOTE Confidence: 0.950316926666667

 $00:16:14.350 \longrightarrow 00:16:17.518$ which is basically taking out your

NOTE Confidence: 0.950316926666667

 $00{:}16{:}17.518 \dashrightarrow 00{:}16{:}20.605$ own T cells, putting them into a Petri

NOTE Confidence: 0.950316926666667

 $00:16:20.605 \longrightarrow 00:16:22.790$ dish where they have a pep rally,

NOTE Confidence: 0.950316926666667

 $00:16:22.790 \longrightarrow 00:16:25.961$ as Tim would say, getting revved up

NOTE Confidence: 0.950316926666667

 $00{:}16{:}25.961 \dashrightarrow 00{:}16{:}29.150$ to fight against particular antigens,

NOTE Confidence: 0.950316926666667

 $00{:}16{:}29.150 \dashrightarrow 00{:}16{:}31.562$ and then they are reinjected into

NOTE Confidence: 0.950316926666667

 $00:16:31.562 \longrightarrow 00:16:34.370$ your body where they do their magic.

00:16:34.370 --> 00:16:35.846 And Tim, right before the break,

NOTE Confidence: 0.950316926666667

 $00:16:35.850 \longrightarrow 00:16:38.433$ he told us a nice case that you had

NOTE Confidence: 0.950316926666667

00:16:38.433 --> 00:16:40.989 seen early on in your career where

NOTE Confidence: 0.950316926666667

 $00:16:40.989 \longrightarrow 00:16:44.223$ somebody who had failed multiple lines

NOTE Confidence: 0.950316926666667

 $00:16:44.223 \longrightarrow 00:16:47.080$ of chemotherapy and Rituximab and

NOTE Confidence: 0.950316926666667

 $00:16:47.080 \longrightarrow 00:16:49.965$ radiation and stem cell transplant

NOTE Confidence: 0.950316926666667

 $00{:}16{:}49.970 \dashrightarrow 00{:}16{:}54.155$ really got CAR T cell therapy and did

NOTE Confidence: 0.950316926666667

 $00{:}16{:}54.155 \dashrightarrow 00{:}16{:}56.570$ well for at least two years thereafter.

NOTE Confidence: 0.950316926666667

 $00:16:56.570 \longrightarrow 00:17:00.514$ So certainly it has a role to play.

NOTE Confidence: 0.950316926666667

 $00:17:00.520 \longrightarrow 00:17:03.118$ But it is not without toxicity.

NOTE Confidence: 0.950316926666667

 $00{:}17{:}03.120 \dashrightarrow 00{:}17{:}05.235$ It certainly has some biologic

NOTE Confidence: 0.950316926666667

 $00:17:05.235 \longrightarrow 00:17:07.781$ toxicities as we talked about before

NOTE Confidence: 0.950316926666667

 $00:17:07.781 \longrightarrow 00:17:09.743$ the break and a significant price

NOTE Confidence: 0.950316926666667

 $00:17:09.743 \longrightarrow 00:17:12.080$ tag for those of you just joining us.

NOTE Confidence: 0.950316926666667

 $00:17:12.080 \longrightarrow 00:17:14.900$ That price tag was estimated to

NOTE Confidence: 0.950316926666667

 $00:17:14.900 \longrightarrow 00:17:16.193$ be roughly \$400,000.

00:17:16.193 --> 00:17:17.252 And so Tim,

NOTE Confidence: 0.950316926666667

 $00:17:17.252 \longrightarrow 00:17:19.832$ the part that I want to talk

NOTE Confidence: 0.950316926666667

 $00:17:19.832 \longrightarrow 00:17:22.472$ about in this next segment is

NOTE Confidence: 0.950316926666667

 $00:17:22.472 \longrightarrow 00:17:24.936$ the issue that you brought up in

NOTE Confidence: 0.950316926666667

 $00:17:24.936 \longrightarrow 00:17:27.332$ passing before the break, which is

NOTE Confidence: 0.950316926666667

 $00:17:27.332 \longrightarrow 00:17:29.196$ it doesn't always work.

NOTE Confidence: 0.950316926666667

 $00:17:29.200 \longrightarrow 00:17:30.718$ So tell us a bit more,

NOTE Confidence: 0.950316926666667

 $00:17:30.720 \dashrightarrow 00:17:35.355$ how often does CAR T cell therapy not work?

NOTE Confidence: 0.950316926666667

00:17:35.360 --> 00:17:36.752 And why is that?

NOTE Confidence: 0.950316926666667

00:17:36.752 --> 00:17:39.369 Why is it that some people may

NOTE Confidence: 0.950316926666667

 $00:17:39.369 \longrightarrow 00:17:42.484$ have what seems to be a miraculous

NOTE Confidence: 0.950316926666667

 $00:17:42.484 \longrightarrow 00:17:44.997$ response whereas others not so much?

NOTE Confidence: 0.944279066

 $00:17:45.880 \longrightarrow 00:17:48.328$ Yeah, exactly. So that's the

NOTE Confidence: 0.944279066

 $00:17:48.328 \longrightarrow 00:17:50.720 $400,000$ question.

NOTE Confidence: 0.944279066

 $00:17:50.720 \longrightarrow 00:17:52.470$ What we have seen

 $00:17:52.470 \longrightarrow 00:17:54.427$ is where this is being

NOTE Confidence: 0.944279066

00:17:54.427 --> 00:17:56.620 actively studied by a lot of groups,

NOTE Confidence: 0.944279066

 $00:17:56.620 \longrightarrow 00:17:58.846$ why do some patients respond

NOTE Confidence: 0.944279066

 $00:17:58.846 \longrightarrow 00:18:00.934$ and others not respond and what

NOTE Confidence: 0.944279066

 $00:18:00.934 \longrightarrow 00:18:02.519$ are the mechanisms of resistance

NOTE Confidence: 0.944279066

00:18:02.519 --> 00:18:04.941 and what are the prognostic kind of

NOTE Confidence: 0.944279066

 $00{:}18{:}04.941 \dashrightarrow 00{:}18{:}07.053$ factors that help us understand that.

NOTE Confidence: 0.944279066

 $00:18:07.060 \longrightarrow 00:18:08.698$ One of the major prognostic factors

NOTE Confidence: 0.944279066

00:18:08.698 --> 00:18:10.721 that we've seen is the total amount

NOTE Confidence: 0.944279066

 $00:18:10.721 \longrightarrow 00:18:12.176$ of disease that somebody has.

NOTE Confidence: 0.944279066

 $00:18:12.180 \longrightarrow 00:18:13.496$ So we quantify this

NOTE Confidence: 0.944279066

 $00{:}18{:}13.496 --{>} 00{:}18{:}15.470 \text{ using a term called}$

NOTE Confidence: 0.944279066

00:18:15.547 --> 00:18:17.899 metabolic tumor burden, or

NOTE Confidence: 0.944279066

 $00:18:17.899 \longrightarrow 00:18:20.257$ even just the size of the tumors.

NOTE Confidence: 0.944279066

 $00:18:20.260 \longrightarrow 00:18:22.740$ And we use the term metabolic tumor burden.

NOTE Confidence: 0.944279066

 $00{:}18{:}22.740 \dashrightarrow 00{:}18{:}24.498$ If somebody gets a PET scan,

 $00:18:24.500 \longrightarrow 00:18:26.376$ these are scans that can

NOTE Confidence: 0.944279066

 $00:18:26.376 \longrightarrow 00:18:27.902$ trace the amount of metabolic

NOTE Confidence: 0.944279066

 $00:18:27.902 \longrightarrow 00:18:29.218$ activity in the cancer.

NOTE Confidence: 0.944279066

 $00:18:29.220 \longrightarrow 00:18:30.957$ Add that all up and we can

NOTE Confidence: 0.944279066

 $00{:}18{:}30.957 \dashrightarrow 00{:}18{:}32.599$ get a volume of how much disease

NOTE Confidence: 0.944279066

 $00:18:32.599 \longrightarrow 00:18:33.740$ and how active it is.

NOTE Confidence: 0.944279066

 $00:18:33.740 \longrightarrow 00:18:35.973$ And we have seen repeatedly and multiple

NOTE Confidence: 0.944279066

00:18:35.973 --> 00:18:37.626 investigators have seen this, that

NOTE Confidence: 0.944279066

 $00:18:37.626 \longrightarrow 00:18:39.580$ when you have a high burden of disease,

NOTE Confidence: 0.944279066

 $00:18:39.580 \longrightarrow 00:18:42.436$ those patients don't do as well with

NOTE Confidence: 0.944279066

00:18:42.436 --> 00:18:44.616 CAR T. As we learn more about this,

NOTE Confidence: 0.944279066

00:18:44.620 --> 00:18:45.820 there's different mechanisms,

NOTE Confidence: 0.944279066

 $00:18:45.820 \longrightarrow 00:18:48.700$ but what we think is that basically

NOTE Confidence: 0.944279066

 $00{:}18{:}48.700 \dashrightarrow 00{:}18{:}50.877$ there's many reasons why CAR T cells

NOTE Confidence: 0.944279066

 $00:18:50.877 \longrightarrow 00:18:53.579$ can fail and I will list a few.

 $00:18:53.580 \longrightarrow 00:18:53.895$ One,

NOTE Confidence: 0.944279066

 $00:18:53.895 \longrightarrow 00:18:56.100$ we have seen that sometimes the target

NOTE Confidence: 0.944279066

 $00:18:56.100 \longrightarrow 00:18:58.652$ they go after, the CD19 can

NOTE Confidence: 0.944279066

 $00:18:58.652 \longrightarrow 00:19:00.820$ become more elusive or down regulated

NOTE Confidence: 0.944279066

 $00:19:00.820 \longrightarrow 00:19:03.142$ and then that can be a way for cells

NOTE Confidence: 0.944279066

 $00:19:03.142 \longrightarrow 00:19:05.256$ to kind of evade this therapy.

NOTE Confidence: 0.944279066

 $00:19:05.260 \dashrightarrow 00:19:07.564$ Fortunately for us the B cell lymphomas

NOTE Confidence: 0.944279066

 $00:19:07.564 \longrightarrow 00:19:09.778$ tend to be fairly dependent on that.

NOTE Confidence: 0.944279066

 $00:19:09.780 \longrightarrow 00:19:11.124$ So we don't think that's a

NOTE Confidence: 0.944279066

00:19:11.124 --> 00:19:12.020 major source of resistance,

NOTE Confidence: 0.944279066

 $00:19:12.020 \longrightarrow 00:19:13.560$ but it's theoretically

NOTE Confidence: 0.944279066

 $00{:}19{:}13.560 \dashrightarrow 00{:}19{:}15.670$ there and it happens in leukemia.

NOTE Confidence: 0.944279066

00:19:15.670 --> 00:19:17.550 The other things that can happen,

00:19:18.062 --> 00:19:19.598 the biggest issue, is just a

NOTE Confidence: 0.944279066

00:19:19.598 --> 00:19:20.950 worn out immune system.

NOTE Confidence: 0.944279066

 $00:19:20.950 \longrightarrow 00:19:22.483$ And what we have learned is

 $00:19:22.483 \longrightarrow 00:19:23.549$ that if somebody's T cells,

NOTE Confidence: 0.944279066

 $00:19:23.550 \longrightarrow 00:19:24.677$ you can take them out of their

NOTE Confidence: 0.944279066

 $00:19:24.677 \longrightarrow 00:19:25.390$ body and

NOTE Confidence: 0.944279066

 $00:19:25.390 \longrightarrow 00:19:26.610$ genetically engineer them to

NOTE Confidence: 0.944279066

 $00:19:26.610 \longrightarrow 00:19:27.830$ put them back in.

NOTE Confidence: 0.944279066

 $00:19:27.830 \longrightarrow 00:19:29.573$ But if you look at many

NOTE Confidence: 0.944279066

00:19:29.573 --> 00:19:31.509 of these T cells in patients,

NOTE Confidence: 0.944279066

00:19:31.510 --> 00:19:33.550 especially patients who've gone through

 $00:19:34.402 \longrightarrow 00:19:36.356$ multiple rounds of chemotherapy and

NOTE Confidence: 0.944279066

 $00:19:36.356 \longrightarrow 00:19:38.078$ what we've seen is that the more

NOTE Confidence: 0.944279066

 $00:19:38.078 \longrightarrow 00:19:39.294$ chemotherapies that people have been

NOTE Confidence: 0.944279066

00:19:39.294 --> 00:19:40.862 through before they get the CAR T,

NOTE Confidence: 0.944279066

 $00{:}19{:}40.870 \longrightarrow 00{:}19{:}42.652$ the more worn out and exhausted

NOTE Confidence: 0.944279066

 $00{:}19{:}42.652 \dashrightarrow 00{:}19{:}44.469$ their immune system is and probably

NOTE Confidence: 0.944279066

 $00:19:44.469 \longrightarrow 00:19:45.605$ the worse they do.

NOTE Confidence: 0.944279066

 $00:19:45.610 \longrightarrow 00:19:47.394$ And so we think that one possibility is

 $00:19:47.394 \longrightarrow 00:19:49.567$ that if somebody's immune system,

NOTE Confidence: 0.944279066

 $00:19:49.570 \longrightarrow 00:19:50.506$ if their T cells,

NOTE Confidence: 0.944279066

 $00:19:50.506 \longrightarrow 00:19:52.264$ they can only fight so

NOTE Confidence: 0.944279066

 $00:19:52.264 \longrightarrow 00:19:53.769$ much before they become exhausted.

NOTE Confidence: 0.944279066

 $00:19:56.730 \longrightarrow 00:19:58.711$ And then lastly something that my lab

NOTE Confidence: 0.944279066

 $00:19:58.711 \longrightarrow 00:20:00.679$ has been interested in

NOTE Confidence: 0.944279066

00:20:00.679 --> 00:20:02.415 actually really clinically is

NOTE Confidence: 0.944279066

 $00:20:02.415 \longrightarrow 00:20:04.845$ what about the tumor microenvironment.

NOTE Confidence: 0.944279066

00:20:04.850 --> 00:20:06.434 So again if you have a

NOTE Confidence: 0.944279066

 $00:20:06.434 \longrightarrow 00:20:07.490$ very large angry tumor,

NOTE Confidence: 0.944279066

00:20:07.490 --> 00:20:09.122 in a PET scan you'll see

NOTE Confidence: 0.944279066

 $00:20:09.122 \longrightarrow 00:20:10.307$ what's called a necrotic lesion

NOTE Confidence: 0.944279066

 $00{:}20{:}10.307 \dashrightarrow 00{:}20{:}12.008$ of tentimes and we think that those are

NOTE Confidence: 0.877517055384615

 $00{:}20{:}12.058 \mathrel{--}{>} 00{:}20{:}13.318$ areas where there's a lot of

NOTE Confidence: 0.877517055384615

 $00:20:13.320 \longrightarrow 00:20:15.096$ those tumors are taking up a

NOTE Confidence: 0.877517055384615

 $00:20:15.096 \longrightarrow 00:20:17.486$ ton of sugar and burning it so fast that

00:20:17.486 --> 00:20:19.240 it's actually sucking up all the oxygen.

NOTE Confidence: 0.877517055384615

 $00:20:19.240 \longrightarrow 00:20:20.722$ So there's no oxygen or there's

NOTE Confidence: 0.877517055384615

 $00:20:20.722 \longrightarrow 00:20:22.519$ a lot of hypoxia.

NOTE Confidence: 0.877517055384615

 $00:20:22.520 \longrightarrow 00:20:24.600$ There can be a lot

NOTE Confidence: 0.877517055384615

 $00:20:24.600 \longrightarrow 00:20:26.599$ of lactic acid in these tumors.

NOTE Confidence: 0.877517055384615

 $00:20:26.600 \longrightarrow 00:20:28.841$ And if you put a T cell and exposure

NOTE Confidence: 0.877517055384615

00:20:28.841 --> 00:20:31.080 to hypoxia or acidosis,

NOTE Confidence: 0.877517055384615

00:20:31.080 --> 00:20:32.360 they can't really function.

NOTE Confidence: 0.877517055384615

 $00{:}20{:}32.360 \dashrightarrow 00{:}20{:}34.592$ And so part of the rationale for radiation

NOTE Confidence: 0.877517055384615

00:20:34.592 --> 00:20:36.830 where I've become interested is,

NOTE Confidence: 0.877517055384615

 $00:20:36.830 \longrightarrow 00:20:38.615$ how do we prevent the CAR T

NOTE Confidence: 0.877517055384615

00:20:38.615 --> 00:20:40.480 cells from not getting worn out,

NOTE Confidence: 0.877517055384615

 $00{:}20{:}40.480 \dashrightarrow 00{:}20{:}41.825$ from fighting just an enormous

NOTE Confidence: 0.877517055384615

00:20:41.825 --> 00:20:43.455 amount of tumor where it's just

NOTE Confidence: 0.877517055384615

00:20:43.455 --> 00:20:44.595 too much tumor to fight?

 $00{:}20{:}44.600 \dashrightarrow 00{:}20{:}46.070$ How can we use radiation to help

NOTE Confidence: 0.877517055384615

 $00{:}20{:}46.070 \dashrightarrow 00{:}20{:}47.951$ kind of get rid of these areas of

NOTE Confidence: 0.877517055384615

00:20:47.951 --> 00:20:49.440 hypoxy and acidosis that are just

NOTE Confidence: 0.877517055384615

 $00:20:49.440 \longrightarrow 00:20:50.959$ really defeating the T cells?

NOTE Confidence: 0.935222021666667

 $00:20:52.280 \longrightarrow 00:20:54.656$ So tell us more about that. I mean

NOTE Confidence: 0.935222021666667

 $00:20:54.656 \longrightarrow 00:20:58.022$ is the idea that maybe these people

NOTE Confidence: 0.935222021666667

 $00{:}20{:}58.022 \dashrightarrow 00{:}21{:}00.899$ should have CAR T therapy upfront before

NOTE Confidence: 0.935222021666667

00:21:00.899 --> 00:21:03.960 they ever get chemotherapy, tell us more

NOTE Confidence: 0.935222021666667

00:21:03.960 --> 00:21:06.519 about what your findings are showing us?

NOTE Confidence: 0.941930944166666

00:21:06.880 --> 00:21:08.203 Yeah, sure. So I think you kind

NOTE Confidence: 0.941930944166666

 $00{:}21{:}08.203 \dashrightarrow 00{:}21{:}09.439$ of mentioned 2 viable options,

NOTE Confidence: 0.941930944166666

 $00:21:09.440 \longrightarrow 00:21:10.760$ both of which are being pursued.

NOTE Confidence: 0.941930944166666

 $00:21:10.760 \longrightarrow 00:21:11.796$ So I'll start with the first one,

NOTE Confidence: 0.941930944166666 00:21:11.800 --> 00:21:12.944 which is, NOTE Confidence: 0.941930944166666

00:21:12.944 --> 00:21:14.880 what about getting CAR T earlier up,

NOTE Confidence: 0.941930944166666

 $00:21:14.880 \longrightarrow 00:21:16.680$ on the docket?

00:21:16.680 --> 00:21:19.160 And that's being actively explored.

NOTE Confidence: 0.941930944166666

 $00:21:19.160 \longrightarrow 00:21:20.980$ And so you know, CAR T cell

NOTE Confidence: 0.941930944166666

00:21:20.980 --> 00:21:22.980 therapy when it first got approved,

NOTE Confidence: 0.941930944166666

 $00:21:22.980 \longrightarrow 00:21:23.805$ it was only for patients

NOTE Confidence: 0.941930944166666

00:21:23.805 --> 00:21:25.400 who'd been through two prior

NOTE Confidence: 0.941930944166666

 $00:21:25.400 \longrightarrow 00:21:26.255$ chemotherapies that didn't work.

NOTE Confidence: 0.941930944166666

00:21:26.255 --> 00:21:27.739 So that had to be the minimum,

NOTE Confidence: 0.941930944166666

00:21:27.740 --> 00:21:29.820 but typically they'd seen many more,

NOTE Confidence: 0.941930944166666

 $00:21:29.820 \longrightarrow 00:21:31.032$ five or six even.

NOTE Confidence: 0.941930944166666

 $00{:}21{:}31.032 \dashrightarrow 00{:}21{:}33.756$ And that's where we got a 40% cure rate.

NOTE Confidence: 0.941930944166666

 $00:21:33.756 \longrightarrow 00:21:36.220$ But then what we saw is that there's

NOTE Confidence: 0.941930944166666

 $00:21:36.288 \longrightarrow 00:21:38.724$ been recently trials where after a

NOTE Confidence: 0.941930944166666

 $00{:}21{:}38.724 \dashrightarrow 00{:}21{:}41.139$ single line of chemotherapy has failed,

NOTE Confidence: 0.941930944166666

 $00:21:41.140 \longrightarrow 00:21:42.180$ all those patients used to

NOTE Confidence: 0.941930944166666

 $00:21:42.180 \longrightarrow 00:21:43.220$ go to something called an

00:21:43.220 --> 00:21:45.740 autologous stem cell transplant.

NOTE Confidence: 0.965412215

 $00{:}21{:}45.740 \dashrightarrow 00{:}21{:}47.516$ And again, this is not my area

NOTE Confidence: 0.965412215

 $00:21:47.516 \longrightarrow 00:21:49.636$ of expertise, but

NOTE Confidence: 0.965412215

 $00:21:49.636 \longrightarrow 00:21:51.428$ actually the cost of an autologous stem

NOTE Confidence: 0.948639766666667

 $00:21:51.430 \longrightarrow 00:21:53.068$ cell transplant from what I understand

NOTE Confidence: 0.948639766666667

00:21:53.068 --> 00:21:54.549 is actually quite pricey as well.

NOTE Confidence: 0.948639766666667

 $00:21:54.550 \longrightarrow 00:21:55.542$ So it may be quite comparable

NOTE Confidence: 0.948639766666667

 $00:21:55.542 \longrightarrow 00:21:58.108$ to CAR T cell therapy.

NOTE Confidence: 0.948639766666667

00:21:58.110 --> 00:21:59.640 And so anyway, they

NOTE Confidence: 0.948639766666667

 $00:21:59.640 \longrightarrow 00:22:01.110$ basically would try and do that.

NOTE Confidence: 0.948639766666667

 $00{:}22{:}01.110 \dashrightarrow 00{:}22{:}02.825$ But there's randomized trials where

NOTE Confidence: 0.948639766666667

 $00:22:02.825 \longrightarrow 00:22:04.919$ they did autologous stem cell transplant

NOTE Confidence: 0.948639766666667

 $00{:}22{:}04.919 \dashrightarrow 00{:}22{:}06.815$ versus CAR T for patients with

NOTE Confidence: 0.9486397666666667

00:22:06.815 --> 00:22:08.749 bad disease that either came back,

NOTE Confidence: 0.948639766666667

 $00:22:08.750 \longrightarrow 00:22:11.306$ within 12 months after

NOTE Confidence: 0.948639766666667

 $00:22:11.310 \longrightarrow 00:22:13.008$ their chemo or they just blew

 $00:22:13.008 \longrightarrow 00:22:14.780$ through first line chemo altogether.

NOTE Confidence: 0.948639766666667

 $00{:}22{:}14.780 \dashrightarrow 00{:}22{:}16.787$ And they saw that CAR T therapy did a

NOTE Confidence: 0.948639766666667

00:22:16.787 --> 00:22:18.888 much better job of getting rid of the

NOTE Confidence: 0.948639766666667

 $00:22:18.888 \longrightarrow 00:22:20.899$ disease than the stem cell transplants.

NOTE Confidence: 0.948639766666667

 $00:22:20.900 \longrightarrow 00:22:22.839$ So that's one thing that's been happening

NOTE Confidence: 0.948639766666667

 $00:22:22.839 \longrightarrow 00:22:24.775$ is that we've moved from third line

NOTE Confidence: 0.948639766666667

 $00:22:24.775 \longrightarrow 00:22:26.699$ to second line and now there's even

NOTE Confidence: 0.948639766666667

 $00{:}22{:}26.699 \dashrightarrow 00{:}22{:}28.481$ trials for patients with first line

NOTE Confidence: 0.948639766666667

00:22:28.481 --> 00:22:30.132 treatment for high risk factors,

NOTE Confidence: 0.948639766666667

 $00:22:30.132 \longrightarrow 00:22:30.884$ for example,

NOTE Confidence: 0.948639766666667

 $00:22:30.884 \longrightarrow 00:22:33.140$ just patients with tumors

NOTE Confidence: 0.948639766666667

00:22:33.140 --> 00:22:35.779 we don't expect to respond to chemo,

NOTE Confidence: 0.948639766666667

 $00{:}22{:}35.780 \dashrightarrow 00{:}22{:}37.250$ bad genomic markers, these kind of

NOTE Confidence: 0.948639766666667

00:22:37.250 --> 00:22:38.778 double hit or triple hit lymphomas,

NOTE Confidence: 0.948639766666667

 $00:22:38.780 \longrightarrow 00:22:39.926$ things like that.

00:22:39.926 --> 00:22:41.836 There's folks who are exploring

NOTE Confidence: 0.948639766666667

 $00:22:41.836 \longrightarrow 00:22:44.008$ introducing CAR T therapy at that line.

NOTE Confidence: 0.948639766666667

00:22:44.010 --> 00:22:45.762 And so really what you're getting

NOTE Confidence: 0.948639766666667

 $00:22:45.762 \longrightarrow 00:22:47.885$ is moving it further up in the process.

NOTE Confidence: 0.948639766666667

 $00:22:47.890 \longrightarrow 00:22:49.528$ So that's kind of one option and

NOTE Confidence: 0.948639766666667

 $00{:}22{:}49.528 \dashrightarrow 00{:}22{:}50.769$ people are certainly doing that.

NOTE Confidence: 0.948639766666667

 $00:22:50.770 \longrightarrow 00:22:52.834$ The other option is well what about radiation

NOTE Confidence: 0.948639766666667

00:22:52.834 --> 00:22:54.648 and trying to reduce the tumor burden.

NOTE Confidence: 0.948639766666667

 $00:22:54.650 \longrightarrow 00:22:57.674$ And so this is another possibility and

NOTE Confidence: 0.948639766666667

00:22:57.674 --> 00:23:00.202 I certainly believe for some

NOTE Confidence: 0.948639766666667

 $00{:}23{:}00.202 \dashrightarrow 00{:}23{:}02.352$ patients that this may actually be

NOTE Confidence: 0.948639766666667

00:23:02.352 --> 00:23:04.067 helping them out and we're trying to

NOTE Confidence: 0.948639766666667

 $00:23:04.067 \longrightarrow 00:23:06.285$ kind of figure out ways to confirm that.

NOTE Confidence: 0.948639766666667

 $00:23:06.290 \longrightarrow 00:23:07.610$ Right now there's many clinical

NOTE Confidence: 0.948639766666667

00:23:07.610 --> 00:23:09.244 trials that are getting up and

NOTE Confidence: 0.948639766666667

 $00{:}23{:}09.244 \dashrightarrow 00{:}23{:}10.564$ running where that's exactly what

 $00:23:10.564 \longrightarrow 00:23:12.230$ we're doing is we're taking patients

NOTE Confidence: 0.948639766666667

 $00:23:12.230 \longrightarrow 00:23:13.630$ with large or bulky tumors

NOTE Confidence: 0.948639766666667

 $00{:}23{:}13.630 \dashrightarrow 00{:}23{:}15.304$ and we're going to use radiation

NOTE Confidence: 0.948639766666667

 $00:23:15.304 \longrightarrow 00:23:16.705$ to basically shrink those tumors

NOTE Confidence: 0.948639766666667

 $00:23:16.705 \longrightarrow 00:23:18.322$ down right before they get the CAR

NOTE Confidence: 0.948639766666667

 $00:23:18.322 \longrightarrow 00:23:19.991$ T cell therapy to reduce the tumor

NOTE Confidence: 0.948639766666667

 $00:23:19.991 \longrightarrow 00:23:21.510$ burden to get rid of those

NOTE Confidence: 0.948639766666667

 $00:23:22.230 \longrightarrow 00:23:24.030$ acid laden and hypoxic environments

NOTE Confidence: 0.948639766666667

 $00{:}23{:}24.030 \dashrightarrow 00{:}23{:}26.253$ and really just try and give the CAR

NOTE Confidence: 0.948639766666667

 $00{:}23{:}26.253 \dashrightarrow 00{:}23{:}28.189$ T cells a better chance to fight.

NOTE Confidence: 0.948639766666667

00:23:28.190 --> 00:23:29.558 And there's also some evidence kind

NOTE Confidence: 0.948639766666667

 $00:23:29.558 \longrightarrow 00:23:31.333$ of which is very early stages that

NOTE Confidence: 0.948639766666667

 $00{:}23{:}31.333 \dashrightarrow 00{:}23{:}32.693$ suggests that radiation may actually

NOTE Confidence: 0.948639766666667

00:23:32.693 --> 00:23:34.299 kind of help stimulate the immune

NOTE Confidence: 0.948639766666667

 $00:23:34.299 \longrightarrow 00:23:36.606$ system and may actually help the CAR T

 $00{:}23{:}36.606 \dashrightarrow 00{:}23{:}38.546$ cells recognize these cancers better.

NOTE Confidence: 0.948639766666667

 $00:23:38.550 \longrightarrow 00:23:40.349$ And so we're exploring all those options.

NOTE Confidence: 0.921514121428571

 $00:23:40.640 \longrightarrow 00:23:42.584$ The other thing that

NOTE Confidence: 0.921514121428571

00:23:42.584 --> 00:23:44.198 our audience might be thinking about,

NOTE Confidence: 0.921514121428571

00:23:44.200 --> 00:23:46.955 especially when we talk about

NOTE Confidence: 0.921514121428571

00:23:46.955 --> 00:23:49.159 hypoxia and hypoxic environments,

NOTE Confidence: 0.921514121428571

 $00:23:49.160 \longrightarrow 00:23:52.240$ is the role of hyperbaric oxygen chambers.

NOTE Confidence: 0.921514121428571

00:23:52.240 --> 00:23:54.472 I mean a lot of people have heard about

NOTE Confidence: 0.921514121428571

 $00:23:54.480 \longrightarrow 00:23:57.655$ these hyperbaric oxygen chambers and

NOTE Confidence: 0.921514121428571

 $00:23:57.655 \longrightarrow 00:24:00.610$ maybe asking themselves,

NOTE Confidence: 0.921514121428571

 $00{:}24{:}00.610 --> 00{:}24{:}03.922$ is that a role for

NOTE Confidence: 0.921514121428571

 $00:24:03.922 \longrightarrow 00:24:06.650$ CAR T therapy to kind of fight where

NOTE Confidence: 0.921514121428571

00:24:06.650 --> 00:24:08.858 maybe we can get more oxygen

NOTE Confidence: 0.921514121428571

 $00:24:08.858 \longrightarrow 00:24:09.962$ into these environments.

NOTE Confidence: 0.921514121428571

 $00:24:09.970 \longrightarrow 00:24:13.874$ Or is it more the tumor micro environment

NOTE Confidence: 0.921514121428571

00:24:13.874 --> 00:24:16.680 itself that may or may not be influenced

 $00:24:16.680 \longrightarrow 00:24:18.729$ by these hyperbaric oxygen chambers.

NOTE Confidence: 0.921514121428571

 $00:24:18.730 \longrightarrow 00:24:20.200$ Can you kind of

NOTE Confidence: 0.921514121428571

 $00:24:20.200 \longrightarrow 00:24:21.530$ shed some light on that?

 $00:24:24.250 \longrightarrow 00:24:26.250$ So the truth is that no one's looked at that.

NOTE Confidence: 0.938576366666667

 $00:24:26.250 \longrightarrow 00:24:28.490$ It's an interesting idea. However,

NOTE Confidence: 0.938576366666667

00:24:28.490 --> 00:24:31.766 I suspect it would be a very bad idea.

NOTE Confidence: 0.938576366666667

 $00:24:31.770 \longrightarrow 00:24:34.272$ The issue is that right now

NOTE Confidence: 0.938576366666667

 $00:24:34.272 \longrightarrow 00:24:36.060$ hyperbaric oxygen, at least in the

NOTE Confidence: 0.938576366666667

 $00{:}24{:}36.060 \dashrightarrow 00{:}24{:}37.650$ radiation world where we use it,

NOTE Confidence: 0.938576366666667

 $00:24:37.650 \longrightarrow 00:24:39.180$ is that if somebody's had radiation

NOTE Confidence: 0.938576366666667

 $00:24:39.180 \longrightarrow 00:24:40.984$ therapy and they had to have high

NOTE Confidence: 0.938576366666667

 $00:24:40.984 \longrightarrow 00:24:42.209$ doses of radiation with chemo,

NOTE Confidence: 0.938576366666667

 $00:24:42.210 \longrightarrow 00:24:44.121$ and they have wound healing issues or

NOTE Confidence: 0.938576366666667

 $00:24:44.121 \longrightarrow 00:24:45.690$ some other toxicities from radiation,

NOTE Confidence: 0.938576366666667

 $00:24:45.690 \longrightarrow 00:24:47.526$ this is getting very high doses

NOTE Confidence: 0.938576366666667

 $00:24:47.526 \longrightarrow 00:24:49.236$ of radiation that we don't have

 $00:24:49.236 \longrightarrow 00:24:50.808$ to use as much in lymphoma.

NOTE Confidence: 0.938576366666667

00:24:50.810 --> 00:24:52.556 But hyperbaric oxygen can be a

NOTE Confidence: 0.938576366666667

 $00:24:52.556 \longrightarrow 00:24:54.649$ way to help with wound healing.

NOTE Confidence: 0.938576366666667

 $00:24:54.650 \longrightarrow 00:24:56.562$ And the reason why I mention that is

NOTE Confidence: 0.938576366666667

 $00:24:56.562 \longrightarrow 00:24:58.395$ that one of the big contraindications

NOTE Confidence: 0.938576366666667

 $00:24:58.395 \longrightarrow 00:25:00.339$ or sources of extreme caution is

NOTE Confidence: 0.938576366666667

 $00:25:00.400 \longrightarrow 00:25:02.206$ that if anybody has active cancer,

NOTE Confidence: 0.938576366666667

 $00{:}25{:}02.210 \longrightarrow 00{:}25{:}04.658$ they're very wary to do hyperbaric

NOTE Confidence: 0.938576366666667

 $00:25:04.658 \longrightarrow 00:25:05.882$ oxygen because anecdotally,

NOTE Confidence: 0.938576366666667

 $00{:}25{:}05.890 \dashrightarrow 00{:}25{:}07.350$ they've seen cases where people

NOTE Confidence: 0.938576366666667

00:25:07.350 --> 00:25:09.096 have done hyperbaric oxygen and the

NOTE Confidence: 0.938576366666667

00:25:09.096 --> 00:25:10.488 cancer has sprung back to life.

NOTE Confidence: 0.938576366666667

 $00{:}25{:}10.490 --> 00{:}25{:}11.730$ And so for example, I

NOTE Confidence: 0.938576366666667

 $00:25:11.730 \longrightarrow 00:25:13.046$ had a patient with CAR T therapy

NOTE Confidence: 0.938576366666667

 $00:25:13.046 \longrightarrow 00:25:14.090$ who I did radiation.

 $00:25:14.090 \longrightarrow 00:25:16.310$ We got rid of this giant, very angry tumor.

NOTE Confidence: 0.938576366666667

00:25:16.310 --> 00:25:17.450 It was ulcerating.

NOTE Confidence: 0.938576366666667

 $00:25:17.450 \longrightarrow 00:25:19.039$ And the tumor destroyed

NOTE Confidence: 0.938576366666667

 $00:25:19.039 \longrightarrow 00:25:20.860$ so much of the tissue around the

NOTE Confidence: 0.938576366666667

 $00:25:20.860 \longrightarrow 00:25:22.486$ leg that you still have ulcers,

NOTE Confidence: 0.938576366666667

 $00{:}25{:}22.490 \dashrightarrow 00{:}25{:}24.488$ even though the cancer has been gone for a year.

NOTE Confidence: 0.938576366666667

00:25:24.490 --> 00:25:26.008 And they still are being cautious

NOTE Confidence: 0.938576366666667

00:25:26.008 --> 00:25:27.020 about doing hyperbaric oxygen

NOTE Confidence: 0.938576366666667

 $00{:}25{:}27.070 \longrightarrow 00{:}25{:}28.295$ because they're worried that if

NOTE Confidence: 0.938576366666667

 $00:25:28.295 \longrightarrow 00:25:29.770$ there's any cancer cells left over,

NOTE Confidence: 0.938576366666667

 $00{:}25{:}29.770 \dashrightarrow 00{:}25{:}31.618$ they will kind of bring those

NOTE Confidence: 0.938576366666667

 $00:25:31.618 \longrightarrow 00:25:32.850$ back with the vengeance.

NOTE Confidence: 0.938576366666667

 $00:25:32.850 \longrightarrow 00:25:33.984$ The other point I would mention

NOTE Confidence: 0.938576366666667

 $00:25:33.984 \longrightarrow 00:25:35.758$ is that it's kind of more of a

NOTE Confidence: 0.938576366666667

00:25:35.758 --> 00:25:36.487 technical modeling perspective,

NOTE Confidence: 0.938576366666667

 $00:25:36.490 \longrightarrow 00:25:37.290$ but I think it's valid.

NOTE Confidence: 0.93857636666666700:25:37.290 --> 00:25:37.846 Is that,

NOTE Confidence: 0.938576366666667

 $00{:}25{:}37.846 \dashrightarrow 00{:}25{:}39.514$ I mean I think it's interesting

NOTE Confidence: 0.938576366666667

 $00:25:39.514 \longrightarrow 00:25:41.640$ is that if you look at a tumor and

NOTE Confidence: 0.938576366666667

 $00:25:41.640 \longrightarrow 00:25:43.250$ you see these hypoxic and

NOTE Confidence: 0.938576366666667

 $00:25:43.250 \longrightarrow 00:25:46.530$ low glucose, highly acidic environments.

NOTE Confidence: 0.938576366666667

 $00{:}25{:}46.530 \dashrightarrow 00{:}25{:}48.890$ And you think, how am I going to fix that?

NOTE Confidence: 0.938576366666667

00:25:48.890 --> 00:25:51.809 Should you increase blood flow,

NOTE Confidence: 0.938576366666667 00:25:51.810 --> 00:25:53.214 should you NOTE Confidence: 0.938576366666667

 $00:25:53.214 \longrightarrow 00:25:54.969$ increase oxygen as you're mentioning?

NOTE Confidence: 0.938576366666667

 $00:25:54.970 \longrightarrow 00:25:55.970$ And as it turns out,

NOTE Confidence: 0.938576366666667

 $00:25:55.970 \longrightarrow 00:25:58.346$ the most effective way to normalize

NOTE Confidence: 0.938576366666667

 $00{:}25{:}58.346 \to 00{:}26{:}00.352$ the tumor microenvironment from a

NOTE Confidence: 0.938576366666667

 $00{:}26{:}00.352 \dashrightarrow 00{:}26{:}01.772$ metabolic perspective is actually

NOTE Confidence: 0.938576366666667

 $00:26:01.772 \longrightarrow 00:26:04.201$ to turn the cancer cells off or

NOTE Confidence: 0.938576366666667

 $00:26:04.201 \longrightarrow 00:26:05.089$ kill cancer cells.

 $00:26:05.090 \longrightarrow 00:26:06.062$ Because the problem is,

NOTE Confidence: 0.938576366666667

00:26:06.062 --> 00:26:08.489 that you have this kind of,

 $00:26:08.868 \longrightarrow 00:26:10.191$ large number of tumor cells that are

NOTE Confidence: 0.938576366666667

 $00:26:10.191 \longrightarrow 00:26:11.290$ sitting there going at full tilt,

NOTE Confidence: 0.938576366666667

 $00:26:11.290 \longrightarrow 00:26:13.756$ you have this necrotic center oftentimes.

NOTE Confidence: 0.938576366666667

00:26:13.760 --> 00:26:14.840 And if you add more oxygen,

NOTE Confidence: 0.938576366666667

 $00:26:14.840 \longrightarrow 00:26:16.360$ all you're gonna do is

NOTE Confidence: 0.938576366666667

 $00:26:16.360 \longrightarrow 00:26:18.114$ feed the ones on the outside just as much.

NOTE Confidence: 0.938576366666667

 $00:26:18.120 \longrightarrow 00:26:19.520$ But then there's gonna be more to

NOTE Confidence: 0.938576366666667

 $00:26:19.520 \longrightarrow 00:26:20.854$ spill over towards the middle and

NOTE Confidence: 0.938576366666667

00:26:20.854 --> 00:26:22.240 there's plenty of cancer cells waiting,

NOTE Confidence: 0.938576366666667

 $00:26:22.240 \longrightarrow 00:26:24.640$ ready to go to soak up those resources.

NOTE Confidence: 0.938576366666667

 $00:26:24.640 \longrightarrow 00:26:26.957$ And so really from a modeling perspective,

NOTE Confidence: 0.938576366666667

 $00{:}26{:}26.960 \dashrightarrow 00{:}26{:}29.080$ and this is one of my mentors from

NOTE Confidence: 0.938576366666667

 $00:26:29.080 \longrightarrow 00:26:31.236$ back at Duke, what they saw,

NOTE Confidence: 0.938576366666667

 $00:26:31.240 \longrightarrow 00:26:32.686$ was that really the most effective

 $00:26:32.686 \longrightarrow 00:26:34.249$ way to normalize the environment was

NOTE Confidence: 0.938576366666667

 $00{:}26{:}34.249 \dashrightarrow 00{:}26{:}36.020$ really to slow down the metabolism

NOTE Confidence: 0.938576366666667

 $00:26:36.020 \longrightarrow 00:26:37.545$ or kill the tumor cells.

NOTE Confidence: 0.938576366666667

00:26:37.550 --> 00:26:38.782 And that trying just to kind of

NOTE Confidence: 0.938576366666667

00:26:38.782 --> 00:26:39.870 feed it more to normalize,

NOTE Confidence: 0.938576366666667

00:26:39.870 --> 00:26:41.244 it really doesn't work out that way.

NOTE Confidence: 0.8611976175

00:26:44.030 --> 00:26:46.484 So certainly people

NOTE Confidence: 0.8611976175

 $00:26:46.484 \longrightarrow 00:26:49.163$ are looking at how we can do

NOTE Confidence: 0.8611976175

00:26:49.163 --> 00:26:51.428 CAR T cell therapy better.

NOTE Confidence: 0.8611976175

 $00:26:51.430 \longrightarrow 00:26:53.405$ And so what's next for

NOTE Confidence: 0.8611976175

00:26:53.405 --> 00:26:54.985 your lab going forward?

NOTE Confidence: 0.93220288

 $00:26:57.070 \longrightarrow 00:26:58.390$ Yeah, so a few things.

NOTE Confidence: 0.93220288

 $00:26:58.390 \longrightarrow 00:26:59.845$ One, I'm excited about the

NOTE Confidence: 0.93220288

 $00{:}26{:}59.845 \dashrightarrow 00{:}27{:}01.510$ clinical trials that are going on,

NOTE Confidence: 0.93220288

 $00:27:01.510 \longrightarrow 00:27:04.174$ trying to figure out what's the best way to

NOTE Confidence: 0.93220288

 $00:27:04.174 \longrightarrow 00:27:07.417$ combine radiation to make CAR T work better.

00:27:07.420 --> 00:27:08.820 And the thing that I'm excited about

NOTE Confidence: 0.93220288

 $00{:}27{:}08.820 \longrightarrow 00{:}27{:}10.418$ this is because it's just very pragmatic.

NOTE Confidence: 0.93220288

 $00:27:10.420 \longrightarrow 00:27:11.540$ We know radiation

NOTE Confidence: 0.93220288

 $00:27:11.540 \longrightarrow 00:27:12.660$ works to shrink down tumors.

NOTE Confidence: 0.93220288

 $00:27:12.660 \longrightarrow 00:27:15.978$ These tumors tend to be responsive.

NOTE Confidence: 0.93220288

 $00:27:15.980 \longrightarrow 00:27:17.420$ We know that can debulk tumors.

NOTE Confidence: 0.93220288

 $00:27:17.420 \longrightarrow 00:27:19.010$ There's been studies showing that

NOTE Confidence: 0.93220288

 $00:27:19.010 \longrightarrow 00:27:20.979$ if you do radiation before CAR T,

NOTE Confidence: 0.93220288

 $00:27:20.980 \longrightarrow 00:27:22.688$ I mentioned that the total

NOTE Confidence: 0.93220288

 $00:27:22.688 \longrightarrow 00:27:24.579$ amount of disease burden predicts outcome,

NOTE Confidence: 0.93220288

 $00:27:24.580 \longrightarrow 00:27:26.060$ well if you look at patients

NOTE Confidence: 0.93220288

 $00:27:26.060 \longrightarrow 00:27:28.724$ who get radiation, the

NOTE Confidence: 0.93220288

 $00:27:28.724 \longrightarrow 00:27:30.244$ tumor burden after radiation does

NOTE Confidence: 0.93220288

 $00:27:30.244 \longrightarrow 00:27:32.252$ the better job of predicting it

NOTE Confidence: 0.93220288

 $00:27:32.252 \longrightarrow 00:27:34.077$ than the tumor burden beforehand.

 $00:27:34.080 \longrightarrow 00:27:35.898$ So in other words we may be able to

NOTE Confidence: 0.93220288

 $00{:}27{:}35.898 \dashrightarrow 00{:}27{:}37.913$ kind of convert high burden of disease

NOTE Confidence: 0.93220288

 $00:27:37.913 \longrightarrow 00:27:39.735$ patients to lower burden and give

NOTE Confidence: 0.93220288

 $00:27:39.735 \longrightarrow 00:27:41.517$ them more favorable outcomes.

NOTE Confidence: 0.93220288

 $00:27:41.520 \longrightarrow 00:27:43.823$ And I'm excited to see where

NOTE Confidence: 0.93220288

 $00:27:43.823 \longrightarrow 00:27:45.354$ these different clinical trials kind

NOTE Confidence: 0.93220288

 $00:27:45.354 \longrightarrow 00:27:46.996$ of end and these clinical trials

NOTE Confidence: 0.93220288

 $00:27:46.996 \longrightarrow 00:27:48.441$ using radiation with smaller doses

NOTE Confidence: 0.93220288

 $00:27:48.441 \longrightarrow 00:27:50.124$ to give novel ways to

NOTE Confidence: 0.93220288

 $00:27:50.124 \longrightarrow 00:27:51.719$ try to wake up the immune system.

NOTE Confidence: 0.93220288

 $00:27:51.720 \longrightarrow 00:27:53.407$ And so I'm very excited to see where these land.

 $00:27:55.370 \longrightarrow 00:27:57.683$ And then two is more on the molecular side.

NOTE Confidence: 0.93220288

00:27:57.690 --> 00:27:58.770 I haven't mentioned this too much,

NOTE Confidence: 0.93220288

 $00:27:58.770 \longrightarrow 00:28:00.530$ but I actually one of the things

NOTE Confidence: 0.93220288

 $00:28:00.530 \longrightarrow 00:28:02.450$ my lab studies is splicing and we think

NOTE Confidence: 0.93220288

 $00:28:02.450 \longrightarrow 00:28:03.890$ that alternative splicing may actually

 $00:28:03.890 \longrightarrow 00:28:06.004$ be one of the mechanisms by which

NOTE Confidence: 0.93220288

 $00{:}28{:}06.010 \dashrightarrow 00{:}28{:}09.210$ CAR T cell therapy actually may not work.

NOTE Confidence: 0.93220288

 $00:28:09.210 \longrightarrow 00:28:10.908$ We actually think that there

NOTE Confidence: 0.93220288

00:28:10.908 --> 00:28:12.693 may be alternative splicing that is

NOTE Confidence: 0.93220288

 $00:28:12.693 \longrightarrow 00:28:14.208$ driving resistance in these lymphomas

NOTE Confidence: 0.93220288

00:28:14.210 --> 00:28:16.555 because splicing is something that

NOTE Confidence: 0.93220288

 $00:28:16.555 \longrightarrow 00:28:18.900$ occurs aberrantly

NOTE Confidence: 0.93220288

00:28:18.974 --> 00:28:20.230 in many hematologic malignancies.

NOTE Confidence: 0.93220288

 $00{:}28{:}20.230 \dashrightarrow 00{:}28{:}24.020$ And my lab has been

NOTE Confidence: 0.93220288

00:28:24.020 --> 00:28:25.470 investigating this and so hopefully

NOTE Confidence: 0.93220288

 $00:28:25.470 \longrightarrow 00:28:27.844$ in the next, year or two,

NOTE Confidence: 0.93220288

 $00:28:27.844 \longrightarrow 00:28:29.620$ we'll kind of hot off the press

NOTE Confidence: 0.93220288

 $00:28:29.620 \longrightarrow 00:28:30.596$ we'll get that out.

NOTE Confidence: 0.93220288

 $00:28:30.596 \longrightarrow 00:28:32.060$ And that's something we're actively pursuing.

NOTE Confidence: 0.9454326275

 $00:28:32.700 \longrightarrow 00:28:35.280$ Dr. Timothy Robinson is an assistant

NOTE Confidence: 0.9454326275

 $00:28:35.280 \longrightarrow 00:28:37.000$ professor of the rapeutic radiology

00:28:37.062 --> 00:28:38.940 at the Yale School of Medicine.

NOTE Confidence: 0.9454326275

 $00:28:38.940 \longrightarrow 00:28:40.740$ If you have questions, the addresses,

NOTE Confidence: 0.9454326275

 $00:28:40.740 \longrightarrow 00:28:42.995$ cancer Answers at vale.edu and

NOTE Confidence: 0.9454326275

 $00:28:42.995 \longrightarrow 00:28:45.729$ past editions of the program are

NOTE Confidence: 0.9454326275

 $00:28:45.729 \longrightarrow 00:28:47.734$ available in audio and written

NOTE Confidence: 0.9454326275

 $00:28:47.734 \longrightarrow 00:28:48.838$ form at yale cancercenter.org.

NOTE Confidence: 0.9454326275

00:28:48.838 --> 00:28:51.222 We hope you'll join us next week to

NOTE Confidence: 0.9454326275

 $00{:}28{:}51.222 \dashrightarrow 00{:}28{:}53.046$ learn more about the fight against

NOTE Confidence: 0.9454326275

 $00:28:53.046 \longrightarrow 00:28:54.850$ cancer here on Connecticut Public Radio.
