## WEBVTT

00:00:00.000 --> 00:00:02.232 Funding for Yale Cancer Answers is NOTE Confidence: 0.815568264545455 00:00:02.232 --> 00:00:04.340 provided by Smilow Cancer Hospital. NOTE Confidence: 0.70792152555555 00:00:06.720 --> 00:00:08.885 Welcome to Yale Cancer Answers NOTE Confidence: 0.70792152555555 00:00:08.885 - 00:00:10.617 with Doctor Anees Chappar. NOTE Confidence: 0.70792152555555  $00:00:10.620 \rightarrow 00:00:12.475$  Yale Cancer Answers features the NOTE Confidence: 0.70792152555555  $00:00:12.475 \rightarrow 00:00:14.759$  latest information on cancer care by NOTE Confidence: 0.70792152555555 00:00:14.759 --> 00:00:16.223 welcoming oncologists and specialists NOTE Confidence: 0.70792152555555  $00:00:16.223 \longrightarrow 00:00:18.672$  who are on the forefront of the NOTE Confidence: 0.70792152555555 00:00:18.672 --> 00:00:20.514 battle to fight cancer. This week, NOTE Confidence: 0.70792152555555 00:00:20.514 --> 00:00:22.656 it's a conversation about GI cancers, NOTE Confidence: 0.70792152555555 00:00:22.660 --> 00:00:24.316 racial and ethnic disparities, NOTE Confidence: 0.70792152555555  $00:00:24.316 \longrightarrow 00:00:25.972$  and improving health outcomes NOTE Confidence: 0.70792152555555 00:00:25.972 --> 00:00:28.171 with Doctor Jacquelyne Gaddy. NOTE Confidence: 0.70792152555555  $00{:}00{:}28.171 \dashrightarrow 00{:}00{:}29.826$  Dr. Gaddy is an assistant professor NOTE Confidence: 0.70792152555555  $00:00:29.826 \rightarrow 00:00:31.533$  of medicine and medical oncology NOTE Confidence: 0.70792152555555

00:00:31.533 --> 00:00:33.459 at the Yale School of Medicine,

NOTE Confidence: 0.70792152555555

00:00:33.460 --> 00:00:35.210 where Doctor Chagpar is a

NOTE Confidence: 0.70792152555555

00:00:35.210 --> 00:00:36.610 professor of surgical oncology.

NOTE Confidence: 0.893221492173913

 $00:00:37.930 \longrightarrow 00:00:39.918$  Maybe we can start off

NOTE Confidence: 0.893221492173913

 $00:00:39.918 \rightarrow 00:00:42.088$  by you telling us a little bit more

NOTE Confidence: 0.893221492173913

 $00:00:42.088 \rightarrow 00:00:43.940$  about yourself and what it is you do.

NOTE Confidence: 0.830529785

00:00:44.190 --> 00:00:46.818 Of course, I recently relocated to

NOTE Confidence: 0.830529785

 $00{:}00{:}46.818 \dashrightarrow 00{:}00{:}50.029$  New Haven from many different cities.

NOTE Confidence: 0.830529785

 $00:00:50.030 \longrightarrow 00:00:51.600$  I am originally from Buffalo,

NOTE Confidence: 0.830529785

 $00:00:51.600 \rightarrow 00:00:53.686$  NY, where I was born and raised,

NOTE Confidence: 0.830529785

 $00{:}00{:}53.690 \dashrightarrow 00{:}00{:}55.586$  and that's where most of my family is.

NOTE Confidence: 0.830529785

00:00:55.590 --> 00:00:58.098 I attended Spelman College during my

NOTE Confidence: 0.830529785

 $00{:}00{:}58.098 \dashrightarrow 00{:}01{:}00.434$  undergraduate education and then went on

NOTE Confidence: 0.830529785

 $00{:}01{:}00{.}434 \dashrightarrow 00{:}01{:}02{.}513$  to Loyola for medical school and also

NOTE Confidence: 0.830529785

00:01:02.513 --> 00:01:04.940 did a little bit of graduate training,

NOTE Confidence: 0.830529785

 $00:01:04.940 \longrightarrow 00:01:06.700$  graduate work at a combined

- NOTE Confidence: 0.830529785
- $00{:}01{:}06{.}700 \dashrightarrow 00{:}01{:}08{.}108$  program with Roswell Park
- NOTE Confidence: 0.830529785
- 00:01:08.110 --> 00:01:09.463 Comprehensive Cancer Center,
- NOTE Confidence: 0.830529785
- 00:01:09.463 --> 00:01:10.816 University of Buffalo,
- NOTE Confidence: 0.830529785
- $00:01:10.820 \rightarrow 00:01:13.424$  and then most recently I just completed
- NOTE Confidence: 0.830529785
- $00{:}01{:}13.424 \dashrightarrow 00{:}01{:}15.459$  my medical on cology fellowship at
- NOTE Confidence: 0.830529785
- $00{:}01{:}15{.}459 \dashrightarrow 00{:}01{:}17{.}579$  the University of North Carolina,
- NOTE Confidence: 0.830529785
- $00{:}01{:}17.580 \dashrightarrow 00{:}01{:}19.656$  where I also obtained my Masters
- NOTE Confidence: 0.830529785
- 00:01:19.656 --> 00:01:21.660 of Science and Clinical Research.
- NOTE Confidence: 0.830529785
- 00:01:21.660 --> 00:01:23.118 As far as what I do,
- NOTE Confidence: 0.830529785
- 00:01:23.120 --> 00:01:25.562 I am a gastrointestinal medical oncologist
- NOTE Confidence: 0.830529785
- $00:01:25.562 \rightarrow 00:01:28.007$  here at Smilow and
- NOTE Confidence: 0.830529785
- $00{:}01{:}28{.}007 \dashrightarrow 00{:}01{:}30{.}576$  for those that may not be aware,
- NOTE Confidence: 0.830529785
- $00:01:30.580 \rightarrow 00:01:33.317$  unlike certain solid tumors such as breast,
- NOTE Confidence: 0.830529785
- $00:01:33.320 \longrightarrow 00:01:34.550$  for instance,
- NOTE Confidence: 0.830529785
- 00:01:34.550 --> 00:01:37.010 GI cancers encompasses many,
- NOTE Confidence: 0.830529785

00:01:37.010 --> 00:01:38.326 many different tumor types.

NOTE Confidence: 0.830529785

00:01:38.326 --> 00:01:41.227 So I see a wide variety of different

NOTE Confidence: 0.830529785

00:01:41.227 --> 00:01:42.947 cancers within GI oncology.

NOTE Confidence: 0.830529785

00:01:42.950 --> 00:01:45.610 And in addition to my clinical work,

NOTE Confidence: 0.830529785

00:01:45.610 --> 00:01:47.018 I also am very,

NOTE Confidence: 0.830529785

 $00:01:47.018 \rightarrow 00:01:49.130$  very invested in research and my

NOTE Confidence: 0.830529785

 $00:01:49.210 \rightarrow 00:01:51.294$  research focus more specifically

NOTE Confidence: 0.830529785

 $00:01:51.294 \rightarrow 00:01:53.899$  is evaluating an equitable cancer

NOTE Confidence: 0.830529785

00:01:53.899 --> 00:01:56.616 care delivery and ultimately hoping

NOTE Confidence: 0.830529785

 $00{:}01{:}56.616 \dashrightarrow 00{:}01{:}59.261$  to develop interventions that will

NOTE Confidence: 0.830529785

 $00:01:59.261 \dashrightarrow 00:02:01.780$  strive to improve cancer care equity.

NOTE Confidence: 0.790109745

 $00:02:02.070 \longrightarrow 00:02:04.686$  So let's dive into that

NOTE Confidence: 0.790109745

 $00{:}02{:}04.690 \dashrightarrow 00{:}02{:}05.730$  a little bit further.

NOTE Confidence: 0.790109745

 $00:02:05.730 \longrightarrow 00:02:08.432$  So you know we often talk about

NOTE Confidence: 0.790109745

 $00:02:08.432 \longrightarrow 00:02:11.209$  diversity in our patient population,

NOTE Confidence: 0.790109745

 $00{:}02{:}11{.}210 \dashrightarrow 00{:}02{:}13{.}682$  but tell us a little bit more about

- NOTE Confidence: 0.790109745
- $00:02:13.682 \rightarrow 00:02:16.066$  what the data tell us in terms of
- NOTE Confidence: 0.790109745
- $00{:}02{:}16{.}070 \dashrightarrow 00{:}02{:}18{.}655$  disparities and its relationship
- NOTE Confidence: 0.790109745
- $00:02:18.655 \dashrightarrow 00:02:21.860$  to outcomes, particularly in GI cancer.
- NOTE Confidence: 0.80526892
- 00:02:22.370 --> 00:02:25.208 Of course. Well as I said
- NOTE Confidence: 0.80526892
- $00{:}02{:}25{.}208 \dashrightarrow 00{:}02{:}28{.}284$  earlier in regards to the large
- NOTE Confidence: 0.80526892
- 00:02:28.284 --> 00:02:31.530 variety of GI cancer tumor types,
- NOTE Confidence: 0.80526892
- $00:02:31.530 \longrightarrow 00:02:33.795$  it's important to note that
- NOTE Confidence: 0.80526892
- $00:02:33.795 \rightarrow 00:02:35.154$  actually gastrointestinal tumors,
- NOTE Confidence: 0.80526892
- $00{:}02{:}35{.}160 \dashrightarrow 00{:}02{:}37{.}071$  some of them are rather common
- NOTE Confidence: 0.80526892
- $00:02:37.071 \dashrightarrow 00:02:39.087$  and some of them not as common.
- NOTE Confidence: 0.80526892
- 00:02:39.090 --> 00:02:39.470 Specifically,
- NOTE Confidence: 0.80526892
- $00{:}02{:}39{.}470 \dashrightarrow 00{:}02{:}41.750$  when we think about colon cancer,
- NOTE Confidence: 0.80526892
- $00:02:41.750 \rightarrow 00:02:43.682$  it's the third most common diagnosed NOTE Confidence: 0.80526892
- $00{:}02{:}43.682 \dashrightarrow 00{:}02{:}45.797$  cancer and it's also unfortunately the
- NOTE Confidence: 0.80526892
- $00{:}02{:}45.797 \dashrightarrow 00{:}02{:}48.089$  third leading cause of cancer death.
- NOTE Confidence: 0.80526892

 $00:02:48.090 \dashrightarrow 00:02:50.526$  And that's both males and females.

NOTE Confidence: 0.80526892

00:02:50.530 --> 00:02:52.240 And you see similar findings

NOTE Confidence: 0.80526892

 $00:02:52.240 \longrightarrow 00:02:53.266$  in esophageal cancer,

NOTE Confidence: 0.80526892

 $00:02:53.270 \longrightarrow 00:02:55.251$  which is not as common as far

NOTE Confidence: 0.80526892

00:02:55.251 --> 00:02:56.800 as diagnosis is concerned,

NOTE Confidence: 0.80526892

 $00:02:56.800 \longrightarrow 00:02:58.774$  but also has a high amount of

NOTE Confidence: 0.80526892

 $00:02:58.774 \longrightarrow 00:03:00.305$  cancer deaths being the 7th

NOTE Confidence: 0.80526892

00:03:00.305 --> 00:03:01.865 leading cause of cancer death,

NOTE Confidence: 0.80526892

 $00{:}03{:}01{.}870 \dashrightarrow 00{:}03{:}03{.}615$  specifically among males and when

NOTE Confidence: 0.80526892

 $00{:}03{:}03{.}615 \dashrightarrow 00{:}03{:}06{.}359$  you when you start to really dissect

NOTE Confidence: 0.80526892

 $00{:}03{:}06{.}360 \dashrightarrow 00{:}03{:}08{.}229$  these numbers and think about top ten

NOTE Confidence: 0.80526892

 $00:03:08.229 \dashrightarrow 00:03:10.479$  or top three and things of that nature,

NOTE Confidence: 0.80526892

00:03:10.480 --> 00:03:11.218 unfortunately,

NOTE Confidence: 0.80526892

 $00:03:11.218 \rightarrow 00:03:16.384$  when we stratify specifically based on race,

NOTE Confidence: 0.80526892

 $00:03:16.390 \rightarrow 00:03:17.362$  and overall background,

NOTE Confidence: 0.80526892

 $00:03:17.362 \rightarrow 00:03:20.113$  we see in many of these cases especially

- NOTE Confidence: 0.80526892
- $00:03:20.113 \rightarrow 00:03:22.627$  when we consider mortality that it's

 $00:03:22.630 \longrightarrow 00:03:24.345$  usually much higher for

NOTE Confidence: 0.80526892

 $00:03:24.345 \longrightarrow 00:03:26.478$  our black patients and this is

NOTE Confidence: 0.80526892

 $00:03:26.478 \rightarrow 00:03:27.898$  seen in pancreatic cancer,

NOTE Confidence: 0.80526892

 $00:03:27.900 \longrightarrow 00:03:29.630$  this is seen in colon,

NOTE Confidence: 0.80526892

 $00{:}03{:}29{.}630 \dashrightarrow 00{:}03{:}31{.}004$  and I could go on and

NOTE Confidence: 0.80526892

 $00:03:31.004 \rightarrow 00:03:32.410$  on about this of course,

NOTE Confidence: 0.80526892

 $00:03:32.410 \longrightarrow 00:03:35.002$  but a lot of this is in some cases

NOTE Confidence: 0.80526892

 $00{:}03{:}35{.}002 \dashrightarrow 00{:}03{:}37{.}559$  related to screening but also just

NOTE Confidence: 0.80526892

 $00{:}03{:}37{.}559 \dashrightarrow 00{:}03{:}39{.}754$  strongly related to structural racism

NOTE Confidence: 0.80526892

 $00:03:39.829 \rightarrow 00:03:42.439$  and the social determinants of health.

NOTE Confidence: 0.871875872727273

 $00:03:42.570 \longrightarrow 00:03:44.754$  And so you know that's always

NOTE Confidence: 0.871875872727273

00:03:44.754 --> 00:03:46.720 been a question about

NOTE Confidence: 0.871875872727273

 $00{:}03{:}46{.}720 \dashrightarrow 00{:}03{:}49{.}948$  whether the disparities we see in

NOTE Confidence: 0.871875872727273

 $00:03:49.948 \rightarrow 00:03:52.669$  outcomes are genetic like biologic

 $00:03:52.669 \rightarrow 00:03:55.513$  or whether they actually do have

NOTE Confidence: 0.871875872727273

 $00:03:55.513 \rightarrow 00:03:58.255$  more to do with socioeconomic

NOTE Confidence: 0.871875872727273

 $00:03:58.255 \rightarrow 00:04:01.315$  status and other issues,

NOTE Confidence: 0.871875872727273

 $00:04:01.320 \longrightarrow 00:04:02.630$  what's your take on that?

NOTE Confidence: 0.8731972366666667

 $00:04:02.840 \longrightarrow 00:04:06.599$  We know from just in recent

NOTE Confidence: 0.8731972366666667

 $00:04:06.599 \longrightarrow 00:04:09.140$  years really being able to,

NOTE Confidence: 0.8731972366666667

 $00:04:09.140 \longrightarrow 00:04:11.758$  I always refer to the tumor type

NOTE Confidence: 0.8731972366666667

 $00{:}04{:}11.758 \dashrightarrow 00{:}04{:}13.787$  signature meaning that when I have

NOTE Confidence: 0.8731972366666667

 $00{:}04{:}13.787 \dashrightarrow 00{:}04{:}16.216$  a patient I can then get very rich

NOTE Confidence: 0.8731972366666667

 $00:04:16.216 \rightarrow 00:04:18.664$  information in regards to the mutations

NOTE Confidence: 0.8731972366666667

 $00{:}04{:}18.664 \dashrightarrow 00{:}04{:}21.240$  and things that are expressed on

NOTE Confidence: 0.8731972366666667

 $00:04:21.240 \dashrightarrow 00:04:23.040$  that particular patients cancer.

NOTE Confidence: 0.8731972366666667

 $00:04:23.040 \rightarrow 00:04:26.208$  So biology is always an extremely

NOTE Confidence: 0.8731972366666667

00:04:26.208 --> 00:04:28.320 important part of

NOTE Confidence: 0.8731972366666667

 $00:04:28.320 \rightarrow 00:04:30.618$  cancer care delivery and also outcomes,

NOTE Confidence: 0.8731972366666667

 $00:04:30.620 \longrightarrow 00:04:32.650$  but when we control for all of

- NOTE Confidence: 0.8731972366666667
- $00:04:32.650 \longrightarrow 00:04:34.628$  what I have just said,
- NOTE Confidence: 0.8731972366666667
- $00{:}04{:}34{.}630 \dashrightarrow 00{:}04{:}37{.}780$  we still see that there are overt
- NOTE Confidence: 0.8731972366666667
- 00:04:37.780 --> 00:04:39.777 differences between non Hispanic
- NOTE Confidence: 0.8731972366666667
- $00{:}04{:}39{.}777 \dashrightarrow 00{:}04{:}42{.}582$  black patients and comparing them
- NOTE Confidence: 0.8731972366666667
- $00{:}04{:}42.582 \dashrightarrow 00{:}04{:}44.826$  to their white counterparts.
- NOTE Confidence: 0.8731972366666667
- $00{:}04{:}44{.}830 \dashrightarrow 00{:}04{:}46{.}840$  And recent data has really shown
- NOTE Confidence: 0.8731972366666667
- $00:04:46.840 \longrightarrow 00:04:50.220$  that a lot of this is a result of
- NOTE Confidence: 0.8731972366666667
- $00:04:50.220 \longrightarrow 00:04:52.185$  the social determinants of health.
- NOTE Confidence: 0.8731972366666667
- $00{:}04{:}52{.}190 \dashrightarrow 00{:}04{:}54{.}838$  And I really try to call things
- NOTE Confidence: 0.8731972366666667
- $00:04:54.838 \longrightarrow 00:04:55.910$  as they are.
- NOTE Confidence: 0.8731972366666667
- $00:04:55.910 \longrightarrow 00:04:57.078$  Sometimes it's the social
- NOTE Confidence: 0.8731972366666667
- $00{:}04{:}57.078 \dashrightarrow 00{:}04{:}57.954$  determinants of health,
- NOTE Confidence: 0.8731972366666667
- 00:04:57.960 00:05:01.104 but when we dig a little bit deeper,
- NOTE Confidence: 0.8731972366666667
- $00{:}05{:}01{.}110 \dashrightarrow 00{:}05{:}02{.}478$  those social determinants are
- NOTE Confidence: 0.8731972366666667
- 00:05:02.478 --> 00:05:04.920 largely a result of as I said,
- NOTE Confidence: 0.8731972366666667

 $00:05:04.920 \longrightarrow 00:05:06.339$  earlier structural racism.

NOTE Confidence: 0.8731972366666667

 $00{:}05{:}06{.}339 \dashrightarrow 00{:}05{:}10{.}390$  We see that things such as food deserts,

NOTE Confidence: 0.8731972366666667

 $00:05:10.390 \longrightarrow 00:05:12.508$  we see that in red lining.

NOTE Confidence: 0.8731972366666667

 $00:05:12.510 \longrightarrow 00:05:15.485$  We see that in lack of screening.

NOTE Confidence: 0.8731972366666667

 $00{:}05{:}15{.}490 \dashrightarrow 00{:}05{:}18{.}808$  We also see that in lack of

NOTE Confidence: 0.8731972366666667

 $00:05:18.810 \longrightarrow 00:05:20.211$  equitable representation amongst

NOTE Confidence: 0.8731972366666667

 $00{:}05{:}20{.}211 \dashrightarrow 00{:}05{:}23{.}013$  cancer clinical trials and all of

NOTE Confidence: 0.8731972366666667

 $00:05:23.013 \rightarrow 00:05:25.236$  these things that I just listed,

NOTE Confidence: 0.8731972366666667

 $00:05:25.240 \rightarrow 00:05:29.014$  they strongly relate to cancer outcomes

NOTE Confidence: 0.8731972366666667

 $00:05:29.014 \rightarrow 00:05:31.530$  and unfortunately inequitable outcomes.

NOTE Confidence: 0.915470025833333

 $00:05:32.040 \longrightarrow 00:05:35.288$  So talk a little bit about how

NOTE Confidence: 0.915470025833333

 $00:05:35.288 \rightarrow 00:05:37.449$  structural racism kind of plays

NOTE Confidence: 0.915470025833333

 $00:05:37.449 \longrightarrow 00:05:39.559$  into that because we certainly

NOTE Confidence: 0.915470025833333

 $00:05:39.559 \dashrightarrow 00:05:42.278$  know that there are food deserts.

NOTE Confidence: 0.915470025833333

 $00{:}05{:}42.280 \dashrightarrow 00{:}05{:}44.890$  We know that there are patients

NOTE Confidence: 0.915470025833333

 $00:05:44.890 \longrightarrow 00:05:47.105$  that are more privileged than

- NOTE Confidence: 0.915470025833333
- 00:05:47.105 --> 00:05:49.050 others in terms of their
- NOTE Confidence: 0.915470025833333
- 00:05:49.050 --> 00:05:50.702 socioeconomic status,
- NOTE Confidence: 0.915470025833333
- $00{:}05{:}50{.}702 \dashrightarrow 00{:}05{:}53{.}765$  but talk to us about the connection
- NOTE Confidence: 0.915470025833333
- $00{:}05{:}53.765 \dashrightarrow 00{:}05{:}56.735$  that can be made between structural
- NOTE Confidence: 0.915470025833333
- $00{:}05{:}56{.}735 \dashrightarrow 00{:}06{:}00{.}006$  racism and those other social
- NOTE Confidence: 0.915470025833333
- $00{:}06{:}00{.}006 \dashrightarrow 00{:}06{:}04{.}240$  determinants of health.
- NOTE Confidence: 0.826763992857143
- $00:06:04.240 \longrightarrow 00:06:05.738$  When we and this is a really,
- NOTE Confidence: 0.826763992857143
- $00:06:05.740 \rightarrow 00:06:07.040$  really hot topic right now,
- NOTE Confidence: 0.826763992857143
- 00:06:07.040 --> 00:06:09.575 but as a black female
- NOTE Confidence: 0.826763992857143
- 00:06:09.575 --> 00:06:11.803 oncologists raised in Buffalo, NY,
- NOTE Confidence: 0.826763992857143
- $00:06:11.803 \rightarrow 00:06:13.154$  which is very much an inner city,
- NOTE Confidence: 0.826763992857143
- $00:06:13.160 \longrightarrow 00:06:14.710$  this is my lived experience.
- NOTE Confidence: 0.826763992857143
- $00:06:14.710 \longrightarrow 00:06:16.804$  So I've been seeing and being
- NOTE Confidence: 0.826763992857143
- $00:06:16.804 \dashrightarrow 00:06:18.808$  actually impacted by this for much
- NOTE Confidence: 0.826763992857143
- $00:06:18.808 \longrightarrow 00:06:20.712$  of my life and largely a result
- NOTE Confidence: 0.826763992857143

 $00:06:20.712 \longrightarrow 00:06:22.845$  of why I'm currently in this as

NOTE Confidence: 0.826763992857143

 $00{:}06{:}22.845 \dashrightarrow 00{:}06{:}25.300$  far as my practice is concerned.

NOTE Confidence: 0.826763992857143

 $00{:}06{:}25{.}300 \dashrightarrow 00{:}06{:}27{.}820$  Let's take an example.

NOTE Confidence: 0.826763992857143

 $00:06:27.820 \dashrightarrow 00:06:30.220$  When we think about cancer clinical

NOTE Confidence: 0.826763992857143

 $00{:}06{:}30{.}220 \dashrightarrow 00{:}06{:}32{.}416$  trial representation or lack of

NOTE Confidence: 0.826763992857143

 $00:06:32.416 \rightarrow 00:06:34.520$  representation of minoritized patients,

NOTE Confidence: 0.826763992857143

 $00{:}06{:}34{.}520 \dashrightarrow 00{:}06{:}38{.}704$  a lot of that is a result of

NOTE Confidence: 0.826763992857143

 $00:06:38.710 \longrightarrow 00:06:41.370$  ineligible criteria.

NOTE Confidence: 0.826763992857143

 $00:06:41.370 \rightarrow 00:06:45.360$  When cancer clinical trials are designed,

NOTE Confidence: 0.826763992857143

 $00:06:45.360 \longrightarrow 00:06:47.064$  they have to determine what patients

NOTE Confidence: 0.826763992857143

00:06:47.064 --> 00:06:48.759 are actually going to be eligible

NOTE Confidence: 0.826763992857143

 $00{:}06{:}48.759 \dashrightarrow 00{:}06{:}50.544$  for this and what patients are not.

NOTE Confidence: 0.826763992857143

 $00:06:50.550 \rightarrow 00:06:53.889$  One of the common criteria for eligibility,

NOTE Confidence: 0.826763992857143

 $00:06:53.890 \longrightarrow 00:06:57.190$  it really looks at comorbidities and

NOTE Confidence: 0.826763992857143

 $00:06:57.190 \longrightarrow 00:06:59.124$  comorbidities being complicating factors

NOTE Confidence: 0.826763992857143

 $00:06:59.124 \rightarrow 00:07:02.043$  such as does this patient have hypertension,

- NOTE Confidence: 0.826763992857143
- $00:07:02.050 \longrightarrow 00:07:03.354$  do they have diabetes,
- NOTE Confidence: 0.826763992857143
- $00:07:03.354 \rightarrow 00:07:04.984$  and if it is diagnosed,
- NOTE Confidence: 0.826763992857143
- $00:07:04.990 \longrightarrow 00:07:07.125$  is it controlled, is it not controlled?
- NOTE Confidence: 0.826763992857143
- $00{:}07{:}07{.}130 \dashrightarrow 00{:}07{:}09{.}106$  We know that minoritized
- NOTE Confidence: 0.826763992857143
- 00:07:09.106 --> 00:07:10.588 patients unfortunately suffer
- NOTE Confidence: 0.826763992857143
- $00:07:10.588 \longrightarrow 00:07:13.440$  from a lot of comorbidities.
- NOTE Confidence: 0.826763992857143
- 00:07:13.440 --> 00:07:15.232 Specifically, hypertension and diabetes,
- NOTE Confidence: 0.826763992857143
- $00:07:15.232 \rightarrow 00:07:17.024$  as I just said.
- NOTE Confidence: 0.826763992857143
- 00:07:17.030 --> 00:07:18.102 And oftentimes,
- $00:07:18.638 \longrightarrow 00:07:20.782$  those two specific comorbidities
- NOTE Confidence: 0.826763992857143
- 00:07:20.782 --> 00:07:23.550 are a result of eating habits,
- NOTE Confidence: 0.826763992857143
- $00:07:23.550 \rightarrow 00:07:26.567$  and they're also a result of obesity,
- NOTE Confidence: 0.826763992857143
- $00:07:26.570 \longrightarrow 00:07:28.808$  which largely is resulting from what
- NOTE Confidence: 0.826763992857143
- $00:07:28.808 \rightarrow 00:07:31.390$  options do you have in your community
- NOTE Confidence: 0.826763992857143
- $00:07:31.390 \longrightarrow 00:07:33.770$  if you live within a food desert,
- NOTE Confidence: 0.826763992857143
- $00:07:33.770 \longrightarrow 00:07:36.654$  one defined as not having access to a fully

 $00:07:36.654 \rightarrow 00:07:38.860$  functioning grocery store that you can

NOTE Confidence: 0.826763992857143

 $00:07:38.860 \longrightarrow 00:07:39.220$  ideally,

NOTE Confidence: 0.826763992857143

 $00:07:39.220 \longrightarrow 00:07:42.100$  walk to so that means your options are limited.

NOTE Confidence: 0.826763992857143

 $00:07:42.100 \longrightarrow 00:07:43.864$  That means you are at times only

NOTE Confidence: 0.826763992857143

 $00{:}07{:}43.864 \dashrightarrow 00{:}07{:}45.899$  allowed to go to the corner store

NOTE Confidence: 0.826763992857143

 $00{:}07{:}45.899 \dashrightarrow 00{:}07{:}47.735$  which doesn't have fresh produce and

NOTE Confidence: 0.826763992857143

 $00:07:47.797 \longrightarrow 00:07:49.904$  which does not have fresh options that

NOTE Confidence: 0.826763992857143

00:07:49.904 --> 00:07:51.958 you can actually go home and cook,

NOTE Confidence: 0.826763992857143

00:07:51.958 --> 00:07:53.393 but instead

NOTE Confidence: 0.826763992857143

 $00{:}07{:}53{.}400 \dashrightarrow 00{:}07{:}55{.}598$  very quick food options that are high

NOTE Confidence: 0.826763992857143

 $00:07:55.598 \rightarrow 00:07:58.279$  in salt and just usually microwavable.

NOTE Confidence: 0.826763992857143

 $00:07:58.280 \longrightarrow 00:07:59.504$  That's a great example,

NOTE Confidence: 0.826763992857143

 $00{:}07{:}59{.}504 \dashrightarrow 00{:}08{:}01{.}034$  because if these patients in

NOTE Confidence: 0.826763992857143

 $00{:}08{:}01{.}034 \dashrightarrow 00{:}08{:}02{.}896$  fact don't have the food options,

NOTE Confidence: 0.826763992857143

 $00:08:02.900 \longrightarrow 00:08:05.444$  how are they really going to

 $00:08:05.444 \rightarrow 00:08:07.853$  have improved outcomes as far

NOTE Confidence: 0.826763992857143

 $00{:}08{:}07.853 \dashrightarrow 00{:}08{:}09.740$  as controlling hypertension?

NOTE Confidence: 0.826763992857143

00:08:09.740 --> 00:08:13.058 Improved obesity or lack of obesity,

NOTE Confidence: 0.826763992857143

 $00:08:13.060 \rightarrow 00:08:14.128$  that's just an example.

NOTE Confidence: 0.826763992857143

 $00:08:14.128 \longrightarrow 00:08:15.730$  But of course there are many

NOTE Confidence: 0.826763992857143

 $00:08:15.783 \longrightarrow 00:08:16.809$  more other examples.

NOTE Confidence: 0.901680732

 $00:08:17.080 \longrightarrow 00:08:19.733$  Yeah, and I think that

NOTE Confidence: 0.901680732

 $00{:}08{:}19.733 \dashrightarrow 00{:}08{:}21.383$  the socioe conomic status and

NOTE Confidence: 0.901680732

 $00{:}08{:}21.383 \dashrightarrow 00{:}08{:}23.123$  the social determinants of

NOTE Confidence: 0.901680732

 $00:08:23.123 \longrightarrow 00:08:25.298$  health are interspersed in that

NOTE Confidence: 0.901680732

 $00{:}08{:}25{.}300 \dashrightarrow 00{:}08{:}28{.}810$  in the sense that

NOTE Confidence: 0.901680732

 $00:08:28.810 \longrightarrow 00:08:30.889$  it also is not just that you live

NOTE Confidence: 0.901680732

 $00{:}08{:}30{.}889 \dashrightarrow 00{:}08{:}33{.}925$  in a food desert, but are you able to

NOTE Confidence: 0.901680732

00:08:33.925 --> 00:08:35.840 afford fresh fruits and vegetables,

NOTE Confidence: 0.901680732

 $00:08:35.840 \longrightarrow 00:08:38.155$  which may be more expensive

NOTE Confidence: 0.901680732

 $00:08:38.155 \longrightarrow 00:08:40.007$  than your other alternatives?

 $00:08:40.010 \rightarrow 00:08:43.889$  And why were you living in a food desert?

NOTE Confidence: 0.901680732

 $00{:}08{:}43.890 \dashrightarrow 00{:}08{:}46.546$  Could it be that was the neighborhood

NOTE Confidence: 0.901680732

 $00:08:46.546 \longrightarrow 00:08:48.562$  that you could afford to live in?

NOTE Confidence: 0.901680732

00:08:48.570 --> 00:08:51.530 So just talk a little bit

NOTE Confidence: 0.901680732

 $00{:}08{:}51{.}530 \dashrightarrow 00{:}08{:}53{.}420$  it seems like there's so

NOTE Confidence: 0.901680732

 $00:08:53.420 \rightarrow 00:08:55.203$  many things that are at Interplay

NOTE Confidence: 0.901680732

 $00{:}08{:}55{.}203 \dashrightarrow 00{:}08{:}57{.}039$  that it's kind of all interwoven.

NOTE Confidence: 0.665316705

 $00:08:57.810 \longrightarrow 00:08:59.122$  That's absolutely correct.

NOTE Confidence: 0.665316705

 $00:08:59.122 \rightarrow 00:09:01.746$  Within recent years,

NOTE Confidence: 0.665316705

 $00:09:01.750 \longrightarrow 00:09:03.220$  I think it was actually

NOTE Confidence: 0.665316705

 $00:09:03.220 \longrightarrow 00:09:04.290$  right during the pandemic,

NOTE Confidence: 0.665316705

 $00{:}09{:}04{.}290 \dashrightarrow 00{:}09{:}05{.}917$  at the start of the pandemic, Dr.

NOTE Confidence: 0.665316705

00:09:05.917 --> 00:09:08.119 Lori Pierce, who is the first

NOTE Confidence: 0.665316705

00:09:08.119 $\operatorname{-->}$ 00:09:09.810 black female president of ASCO,

NOTE Confidence: 0.665316705

 $00:09:09.810 \dashrightarrow 00:09:12.348$  the American Society of Clinical Oncology,

 $00:09:12.350 \rightarrow 00:09:15.185$  she did an amazing job of very much focusing

NOTE Confidence: 0.665316705

 $00:09:15.185 \dashrightarrow 00:09:17.850$  on the social determinants of health.

NOTE Confidence: 0.665316705

 $00{:}09{:}17.850 \dashrightarrow 00{:}09{:}19.956$  And that is not to say that prior to

NOTE Confidence: 0.665316705

 $00:09:19.956 \rightarrow 00:09:22.319$  her presidency we did not talk about

NOTE Confidence: 0.665316705

 $00:09:22.319 \rightarrow 00:09:24.170$  the social determinants of health,

NOTE Confidence: 0.665316705

 $00:09:24.170 \dashrightarrow 00:09:27.544$  but it was not as closely monitored.

NOTE Confidence: 0.665316705

 $00:09:27.550 \longrightarrow 00:09:29.110$  It was not closely

NOTE Confidence: 0.665316705

 $00:09:29.110 \longrightarrow 00:09:30.670$  evaluated especially within cancer

NOTE Confidence: 0.665316705

00:09:30.670 --> 00:09:32.892 care delivery and when we think

NOTE Confidence: 0.665316705

 $00:09:32.892 \longrightarrow 00:09:34.612$  about social determinants of health,

NOTE Confidence: 0.665316705

 $00:09:34.620 \dashrightarrow 00:09:36.615$  it's of course not just food options.

NOTE Confidence: 0.665316705

 $00:09:36.620 \longrightarrow 00:09:38.620$  We think about education,

NOTE Confidence: 0.665316705

 $00:09:38.620 \longrightarrow 00:09:40.620$  we think about finances,

NOTE Confidence: 0.665316705

 $00:09:40.620 \longrightarrow 00:09:42.940$  we think about job options.

NOTE Confidence: 0.665316705

 $00:09:42.940 \longrightarrow 00:09:44.692$  We think about going into it

NOTE Confidence: 0.665316705

 $00:09:44.692 \longrightarrow 00:09:46.734$  a little bit deeper as far as

- NOTE Confidence: 0.665316705
- 00:09:46.734 --> 00:09:48.354 how many children do you have?
- NOTE Confidence: 0.665316705
- $00:09:48.360 \longrightarrow 00:09:49.760$  Are you a single parent?
- NOTE Confidence: 0.665316705
- 00:09:49.760 --> 00:09:51.680 Do you have two parents in the household?
- NOTE Confidence: 0.665316705
- 00:09:51.680 --> 00:09:53.260 If you're a single parent,
- NOTE Confidence: 0.665316705
- $00:09:53.260 \longrightarrow 00:09:54.680$  do you have a babysitter?
- NOTE Confidence: 0.665316705
- $00:09:54.680 \rightarrow 00:09:56.438$  If you don't have a baby sitter,
- NOTE Confidence: 0.665316705
- $00:09:56.440 \rightarrow 00:09:58.996$  who watches the children when you go to work?
- NOTE Confidence: 0.665316705
- $00:09:59.000 \rightarrow 00:09:59.329$  Etcetera.
- NOTE Confidence: 0.665316705
- $00:09:59.329 \rightarrow 00:10:00.316$  These are very,
- NOTE Confidence: 0.665316705
- $00{:}10{:}00{.}316$  -->  $00{:}10{:}02{.}290$  very much interwoven and I think
- NOTE Confidence: 0.665316705
- 00:10:02.356 --> 00:10:04.148 you bring up a good point because
- NOTE Confidence: 0.665316705
- $00:10:04.148 \longrightarrow 00:10:06.029$  they are so interwoven and they
- NOTE Confidence: 0.665316705
- $00:10:06.029 \longrightarrow 00:10:08.141$  very much closely align with
- NOTE Confidence: 0.665316705
- $00{:}10{:}08{.}141 \dashrightarrow 00{:}10{:}11{.}020$  actually defining who that patient is.
- NOTE Confidence: 0.665316705
- $00{:}10{:}11{.}020 \dashrightarrow 00{:}10{:}13{.}316$  It shows that when patients walk into
- NOTE Confidence: 0.665316705

 $00:10:13.316 \rightarrow 00:10:15.690$  the door and they come to see me,

NOTE Confidence: 0.665316705

00:10:15.690 --> 00:10:17.010 it's not just through cancer,

NOTE Confidence: 0.665316705

00:10:17.010 --> 00:10:18.550 it's not just, OK,

NOTE Confidence: 0.665316705

 $00:10:18.550 \rightarrow 00:10:20.769$  this patient has stage 3B colon cancer.

NOTE Confidence: 0.665316705

00:10:20.770 --> 00:10:22.882 I'm going to give them adjuvant

NOTE Confidence: 0.665316705

 $00{:}10{:}22.882 \dashrightarrow 00{:}10{:}24.689$  chemotherapy for three months and

NOTE Confidence: 0.665316705

00:10:24.689 --> 00:10:26.393 then after that etcetera, etcetera.

NOTE Confidence: 0.665316705

00:10:26.393 --> 00:10:26.756 No,

NOTE Confidence: 0.665316705

 $00{:}10{:}26.756 \dashrightarrow 00{:}10{:}28.571$  there's more steps that actually

NOTE Confidence: 0.665316705

 $00:10:28.571 \longrightarrow 00:10:30.872$  need to happen prior to that

NOTE Confidence: 0.665316705

00:10:30.872 --> 00:10:32.396 delivery of adjuvant chemotherapy

NOTE Confidence: 0.665316705

 $00:10:32.396 \longrightarrow 00:10:34.483$  to even evaluate is this patient

NOTE Confidence: 0.665316705

 $00:10:34.483 \rightarrow 00:10:36.527$  going to actually be able to come

NOTE Confidence: 0.665316705

 $00:10:36.530 \longrightarrow 00:10:39.260$  in for treatment on a regular

NOTE Confidence: 0.665316705

 $00:10:39.260 \longrightarrow 00:10:40.625$  scheduled routine basis.

NOTE Confidence: 0.665316705

 $00:10:40.630 \longrightarrow 00:10:42.715$  And again by evaluating those

00:10:42.715 --> 00:10:45.869 prior to I can strive to actually

NOTE Confidence: 0.665316705

 $00{:}10{:}45.870 \dashrightarrow 00{:}10{:}47.435$  understand what are the true

NOTE Confidence: 0.665316705

 $00:10:47.435 \longrightarrow 00:10:49.397$  needs of this patient and

NOTE Confidence: 0.665316705

 $00:10:49.397 \longrightarrow 00:10:50.757$  by identifying those needs,

NOTE Confidence: 0.665316705

00:10:50.760 --> 00:10:52.495 ideally I would identify things

NOTE Confidence: 0.665316705

 $00{:}10{:}52.495 \dashrightarrow 00{:}10{:}55.144$  that are targetable so that I can

NOTE Confidence: 0.665316705

 $00:10:55.144 \longrightarrow 00:10:56.840$  actually provide patients with

NOTE Confidence: 0.665316705

 $00:10:56.840 \longrightarrow 00:10:58.536$  additional supportive services that

NOTE Confidence: 0.665316705

 $00{:}10{:}58{.}598 \dashrightarrow 00{:}11{:}00{.}719$  oftentimes we do have here at Smilow

NOTE Confidence: 0.665316705

00:11:00.720 --> 00:11:02.526 but we just don't even realize

NOTE Confidence: 0.665316705

 $00:11:02.526 \longrightarrow 00:11:04.242$  that the patients are lacking

NOTE Confidence: 0.665316705

 $00{:}11{:}04.242 \dashrightarrow 00{:}11{:}05.589$  these actual resources.

NOTE Confidence: 0.881223837

00:11:06.320 --> 00:11:08.813 Yeah, I mean you bring up such a good

NOTE Confidence: 0.881223837

 $00{:}11{:}08{.}813 \dashrightarrow 00{:}11{:}11{.}369$  point which is really in the

NOTE Confidence: 0.881223837

 $00:11:11.369 \rightarrow 00:11:13.978$  evaluation of the whole patient and

 $00{:}11{:}13.978 \dashrightarrow 00{:}11{:}16.372$  their social context which has direct

NOTE Confidence: 0.881223837

 $00:11:16.380 \longrightarrow 00:11:20.016$  ramifications for their ability to both

NOTE Confidence: 0.881223837

 $00:11:20.016 \rightarrow 00:11:24.309$  comply with the treatment regimen as well as,

NOTE Confidence: 0.881223837

00:11:24.310 --> 00:11:26.170 you know, make it to appointments

NOTE Confidence: 0.881223837

 $00{:}11{:}26.170 \dashrightarrow 00{:}11{:}28.070$  and so on and so forth,

NOTE Confidence: 0.881223837

 $00{:}11{:}28.070 \dashrightarrow 00{:}11{:}30.074$  which really needs to be addressed

NOTE Confidence: 0.881223837

 $00:11:30.074 \longrightarrow 00:11:31.950$  if there are barriers to care.

NOTE Confidence: 0.881223837

 $00:11:31.950 \rightarrow 00:11:35.230$  Now this brings up the important point,

NOTE Confidence: 0.881223837

 $00{:}11{:}36{.}990 \dashrightarrow 00{:}11{:}39{.}190$  there are patients who may

NOTE Confidence: 0.881223837

 $00:11:39.190 \longrightarrow 00:11:41.788$  not be seen at Smilow,

NOTE Confidence: 0.881223837

 $00:11:41.790 \longrightarrow 00:11:44.526$  they may not be seen at large

NOTE Confidence: 0.881223837

 $00{:}11{:}44.526$  -->  $00{:}11{:}46.539$  academic centers that are blessed

NOTE Confidence: 0.881223837

 $00:11:46.539 \longrightarrow 00:11:49.065$  with social workers and perhaps other

NOTE Confidence: 0.881223837

 $00{:}11{:}49.065 \dashrightarrow 00{:}11{:}51.129$  resources and supportive services.

NOTE Confidence: 0.881223837

 $00:11:51.130 \rightarrow 00:11:53.377$  What do you say for patients who

NOTE Confidence: 0.881223837

 $00:11:53.377 \rightarrow 00:11:56.054$  are out in the Community being

- NOTE Confidence: 0.881223837
- $00:11:56.054 \rightarrow 00:11:58.710$  seen by community oncologists?
- NOTE Confidence: 0.881223837
- $00:11:58.710 \longrightarrow 00:12:01.938$  How would you recommend that
- NOTE Confidence: 0.881223837
- $00{:}12{:}01{.}938 \dashrightarrow 00{:}12{:}04{.}701$  community on cologists and that patient
- NOTE Confidence: 0.881223837
- $00:12:04.701 \longrightarrow 00:12:07.845$  work together on those barriers?
- NOTE Confidence: 0.881223837
- $00:12:07.850 \rightarrow 00:12:10.097$  What resources are available for them?
- NOTE Confidence: 0.8142219875
- $00:12:11.010 \longrightarrow 00:12:12.358$  That's a great question.
- NOTE Confidence: 0.8142219875
- $00:12:12.358 \rightarrow 00:12:13.706$  I think it's twofold.
- NOTE Confidence: 0.8142219875
- $00:12:13.710 \longrightarrow 00:12:15.754$  One of the things that I always
- NOTE Confidence: 0.8142219875
- $00:12:15.754 \longrightarrow 00:12:17.130$  strive to tell
- NOTE Confidence: 0.8142219875
- 00:12:17.130 --> 00:12:18.130 my family, my friends,
- NOTE Confidence: 0.8142219875
- $00:12:18.130 \rightarrow 00:12:21.388$  and also my patients is that
- NOTE Confidence: 0.8142219875
- $00{:}12{:}21{.}390 \dashrightarrow 00{:}12{:}24{.}282$  self advocacy is so critical and
- NOTE Confidence: 0.8142219875
- $00{:}12{:}24.282 \dashrightarrow 00{:}12{:}26.210$  asking questions when things
- NOTE Confidence: 0.8142219875
- $00{:}12{:}26.294 \dashrightarrow 00{:}12{:}28.350$  are not explained clearly.
- NOTE Confidence: 0.8142219875
- $00{:}12{:}28.350 \dashrightarrow 00{:}12{:}31.549$  And as I'm describing this to you,
- NOTE Confidence: 0.8142219875

 $00:12:31.550 \longrightarrow 00:12:34.250$  one of the most important factors

NOTE Confidence: 0.8142219875

 $00:12:34.250 \longrightarrow 00:12:36.630$  that we often mislabel within

NOTE Confidence: 0.8142219875

 $00:12:36.630 \longrightarrow 00:12:39.110$  the medical practice is trust.

NOTE Confidence: 0.8142219875

 $00:12:39.110 \longrightarrow 00:12:40.616$  We often say that these patients

NOTE Confidence: 0.8142219875

 $00:12:40.616 \longrightarrow 00:12:42.477$  are not trusting and they're

NOTE Confidence: 0.8142219875

 $00{:}12{:}42.477 \dashrightarrow 00{:}12{:}44.089$  mistrusting for historical reasons,

NOTE Confidence: 0.8142219875

 $00:12:44.090 \rightarrow 00:12:45.850$  which of course is true,

NOTE Confidence: 0.8142219875

 $00:12:45.850 \longrightarrow 00:12:47.800$  but what that really should

NOTE Confidence: 0.8142219875

 $00{:}12{:}47.800 \dashrightarrow 00{:}12{:}50.198$  actually be flipped to is we

NOTE Confidence: 0.8142219875

 $00:12:50.198 \rightarrow 00:12:52.406$  have not moved in a trustworthy manner.

 $00:12:52.728 \longrightarrow 00:12:54.636$  So one of the most important

NOTE Confidence: 0.8142219875

 $00:12:54.636 \rightarrow 00:12:56.030$  things that providers can do,

NOTE Confidence: 0.8142219875

 $00{:}12{:}56{.}030 \dashrightarrow 00{:}12{:}58{.}235$  whether they're in the community or they're

NOTE Confidence: 0.8142219875

 $00{:}12{:}58{.}235 \dashrightarrow 00{:}13{:}00{.}480$  associated with a large academic practice,

NOTE Confidence: 0.8142219875

 $00{:}13{:}00{.}480 \dashrightarrow 00{:}13{:}02{.}796$  they first need to establish rapport.

NOTE Confidence: 0.8142219875

 $00:13:02.800 \longrightarrow 00:13:04.753$  They first need to move in a

 $00:13:04.753 \longrightarrow 00:13:06.919$  way that is in a trusting way.

NOTE Confidence: 0.8142219875

 $00:13:06.920 \rightarrow 00:13:09.496$  By doing that, you would allow ideally

NOTE Confidence: 0.8142219875

 $00:13:09.496 \rightarrow 00:13:12.280$  your patients to become more comfortable.

NOTE Confidence: 0.8142219875

 $00:13:12.280 \longrightarrow 00:13:14.990$  So that way they are aware of what they can

NOTE Confidence: 0.8142219875

 $00:13:15.058 \rightarrow 00:13:17.518$  share and they feel comfortable saying,

NOTE Confidence: 0.8142219875

 $00{:}13{:}17{.}520 \dashrightarrow 00{:}13{:}21{.}188$  OK, I need this, I need that.

NOTE Confidence: 0.8142219875

 $00:13:21.188 \longrightarrow 00:13:22.420$  Social workers

NOTE Confidence: 0.8142219875

 $00:13:22.420 \rightarrow 00:13:24.226$  may not be available in the community,

NOTE Confidence: 0.8142219875

 $00{:}13{:}24{.}230 \dashrightarrow 00{:}13{:}26{.}702$  but some of this honestly is also just

NOTE Confidence: 0.8142219875

 $00:13:26.702 \rightarrow 00:13:28.970$  the work of the physician saying,

NOTE Confidence: 0.8142219875

 $00{:}13{:}28{.}970 \dashrightarrow 00{:}13{:}30{.}250$  OK, I'm aware of this,

NOTE Confidence: 0.8142219875

 $00{:}13{:}30{.}250 \dashrightarrow 00{:}13{:}32{.}259$  if we can get you this transportation

NOTE Confidence: 0.8142219875

 $00:13:32.259 \rightarrow 00:13:34.647$  service that is available in the Community,

NOTE Confidence: 0.8142219875

 $00:13:34.650 \longrightarrow 00:13:37.170$  I can get you here to your

NOTE Confidence: 0.8142219875

 $00:13:37.170 \longrightarrow 00:13:37.890$  actual appointments.

NOTE Confidence: 0.8142219875

00:13:37.890 --> 00:13:39.558 And I think again,

- NOTE Confidence: 0.8142219875
- $00:13:39.558 \longrightarrow 00:13:41.226$  it's just really digging
- NOTE Confidence: 0.8142219875
- 00:13:41.226 --> 00:13:42.882 deeper and being trusting,
- NOTE Confidence: 0.8142219875
- $00:13:42.882 \rightarrow 00:13:44.994$  moving in a trustworthy manner and
- NOTE Confidence: 0.8142219875
- $00:13:44.994 \rightarrow 00:13:47.083$  also being aware of actually what
- NOTE Confidence: 0.8142219875
- 00:13:47.083 --> 00:13:48.698 is available in your community
- NOTE Confidence: 0.8142219875
- $00{:}13{:}48.698 \dashrightarrow 00{:}13{:}50.447$  and then ultimately seeing what
- NOTE Confidence: 0.8142219875
- $00:13:50.447 \longrightarrow 00:13:52.523$  your patient needs if they are
- NOTE Confidence: 0.8142219875
- $00:13:52.530 \rightarrow 00:13:54.497$  willing ideally to share that with you.
- NOTE Confidence: 0.9173279524
- $00:13:54.540 \longrightarrow 00:13:57.200$  So important to kind of really
- NOTE Confidence: 0.9173279524
- $00{:}13{:}57{.}200 \dashrightarrow 00{:}13{:}58{.}717$  understand what Community resources
- NOTE Confidence: 0.9173279524
- 00:13:58.717 --> 00:14:01.213 you might have available to you to try
- NOTE Confidence: 0.9173279524
- $00:14:01.213 \longrightarrow 00:14:03.679$  to address some of those disparities.
- NOTE Confidence: 0.9173279524
- $00:14:03.680 \longrightarrow 00:14:05.408$  We're going to pick up this
- NOTE Confidence: 0.9173279524
- $00{:}14{:}05{.}408 \dashrightarrow 00{:}14{:}06{.}901$  conversation right after we take
- NOTE Confidence: 0.9173279524
- $00:14:06.901 \longrightarrow 00:14:08.605$  a short break for medical minute.
- NOTE Confidence: 0.9173279524

 $00:14:08.610 \longrightarrow 00:14:10.362$  Please stay tuned to learn more

NOTE Confidence: 0.9173279524

 $00{:}14{:}10.362 \dashrightarrow 00{:}14{:}12.552$  about the care of GI cancers with

NOTE Confidence: 0.9173279524

00:14:12.552 --> 00:14:14.390 my guest doctor, Jacquelyne Gaddy.

NOTE Confidence: 0.78542744

00:14:15.210 --> 00:14:17.210 Funding for Yale Cancer Answers

NOTE Confidence: 0.78542744

00:14:17.210 --> 00:14:19.210 comes from Smilow Cancer Hospital,

NOTE Confidence: 0.78542744

 $00{:}14{:}19{.}210 \dashrightarrow 00{:}14{:}20{.}866$  where their one-of-a-kind

NOTE Confidence: 0.78542744

00:14:20.866 --> 00:14:21.970 Sexuality, intimacy,

NOTE Confidence: 0.78542744

 $00:14:21.970 \longrightarrow 00:14:24.375$  and menopause program combines medical

NOTE Confidence: 0.78542744

 $00{:}14{:}24{.}375 \dashrightarrow 00{:}14{:}25{.}818$  and psychological interventions

NOTE Confidence: 0.78542744

 $00{:}14{:}25.818 \dashrightarrow 00{:}14{:}28.256$  for women who experience sexual

NOTE Confidence: 0.78542744

 $00:14:28.256 \longrightarrow 00:14:29.669$  dys function after cancer.

NOTE Confidence: 0.78542744

00:14:29.670 --> 00:14:31.750 Smilowcancerhospital.org.

NOTE Confidence: 0.911714634210526

 $00{:}14{:}33{.}970 \dashrightarrow 00{:}14{:}35{.}854$  Genetic testing can be useful for

NOTE Confidence: 0.911714634210526

 $00{:}14{:}35{.}854 \dashrightarrow 00{:}14{:}37{.}702$  people with certain types of cancer

NOTE Confidence: 0.911714634210526

 $00{:}14{:}37.702 \dashrightarrow 00{:}14{:}39.564$  that seem to run in their families.

NOTE Confidence: 0.911714634210526

 $00:14:39.570 \rightarrow 00:14:41.856$  Genetic counseling is a process that

00:14:41.856 --> 00:14:43.836 includes collecting a detailed personal

NOTE Confidence: 0.911714634210526

 $00{:}14{:}43.836 \dashrightarrow 00{:}14{:}46.374$  and family history, a risk assessment,

NOTE Confidence: 0.911714634210526

 $00:14:46.374 \rightarrow 00:14:49.510$  and a discussion of genetic testing options.

NOTE Confidence: 0.911714634210526

 $00:14:49.510 \longrightarrow 00:14:51.782$  Only about 5 to 10% of all

NOTE Confidence: 0.911714634210526

 $00:14:51.782 \longrightarrow 00:14:52.790$  cancers are inherited,

NOTE Confidence: 0.911714634210526

 $00:14:52.790 \rightarrow 00:14:55.454$  and genetic testing is not recommended

NOTE Confidence: 0.911714634210526

 $00:14:55.454 \rightarrow 00:14:58.070$  for everyone individuals who have a

NOTE Confidence: 0.911714634210526

 $00:14:58.070 \rightarrow 00:15:00.374$  personal and or family history that

NOTE Confidence: 0.911714634210526

 $00:15:00.374 \rightarrow 00:15:02.809$  includes cancer at unusually early ages,

NOTE Confidence: 0.911714634210526

 $00:15:02.810 \longrightarrow 00:15:03.488$  multiple relatives

NOTE Confidence: 0.911714634210526

 $00{:}15{:}03.488 \dashrightarrow 00{:}15{:}05.522$  on the same side of the

NOTE Confidence: 0.911714634210526

 $00:15:05.522 \rightarrow 00:15:07.250$  family with the same cancer,

NOTE Confidence: 0.911714634210526

 $00{:}15{:}07{.}250 \dashrightarrow 00{:}15{:}09{.}120$  more than one diagnosis of

NOTE Confidence: 0.911714634210526

 $00:15:09.120 \longrightarrow 00:15:10.990$  cancer in the same individual,

NOTE Confidence: 0.911714634210526

 $00:15:10.990 \rightarrow 00:15:11.790$  rare cancers,

00:15:11.790 --> 00:15:14.590 or family history of a known altered

NOTE Confidence: 0.911714634210526

00:15:14.590 --> 00:15:17.092 cancer predisposing gene could be

NOTE Confidence: 0.911714634210526

00:15:17.092 --> 00:15:19.124 candidates for genetic testing.

NOTE Confidence: 0.911714634210526

 $00:15:19.130 \rightarrow 00:15:21.110$  Resources for genetic counseling and

NOTE Confidence: 0.911714634210526

 $00:15:21.110 \rightarrow 00:15:23.090$  testing are available at federally

NOTE Confidence: 0.911714634210526

 $00{:}15{:}23{.}154 \dashrightarrow 00{:}15{:}25{.}390$  designated comprehensive cancer centers,

NOTE Confidence: 0.911714634210526

00:15:25.390 --> 00:15:27.220 such as Yale Cancer Center

NOTE Confidence: 0.911714634210526

00:15:27.220 --> 00:15:29.050 and Smilow Cancer Hospital.

NOTE Confidence: 0.911714634210526

00:15:29.050 --> 00:15:31.450 More information is available

NOTE Confidence: 0.911714634210526

 $00{:}15{:}31.450 \dashrightarrow 00{:}15{:}32.482$  at yale cancercenter.org.

NOTE Confidence: 0.911714634210526

 $00{:}15{:}32{.}482 \dashrightarrow 00{:}15{:}34{.}210$  You're list ening to Connecticut

NOTE Confidence: 0.911714634210526

 $00:15:34.210 \longrightarrow 00:15:35.060$  Public Radio.

NOTE Confidence: 0.7806404766666667

 $00{:}15{:}35{.}920 \dashrightarrow 00{:}15{:}37{.}918$  Welcome back to Yale Cancer Answers.

NOTE Confidence: 0.7806404766666667

 $00{:}15{:}37{.}920 \dashrightarrow 00{:}15{:}39{.}460$  This is doctor Anees Chagpar

NOTE Confidence: 0.7806404766666667

00:15:39.460 --> 00:15:41.518 and I'm joined tonight by my guest,

NOTE Confidence: 0.7806404766666667

 $00:15:41.520 \rightarrow 00:15:42.690$  doctor Jacquelyne Gaddy.

- NOTE Confidence: 0.7806404766666667
- $00:15:42.690 \longrightarrow 00:15:44.640$  We're discussing the care of
- NOTE Confidence: 0.7806404766666667
- $00{:}15{:}44.640 \dashrightarrow 00{:}15{:}46.737$  patients with GI cancer as well
- NOTE Confidence: 0.7806404766666667
- $00{:}15{:}46.737 \dashrightarrow 00{:}15{:}48.307$  as racial and ethnic disparities
- NOTE Confidence: 0.7806404766666667
- $00{:}15{:}48{.}307 \dashrightarrow 00{:}15{:}50{.}200$  and improving health outcomes.
- NOTE Confidence: 0.7806404766666667
- $00:15:50.200 \longrightarrow 00:15:52.525$  Now one of the things,
- NOTE Confidence: 0.7806404766666667
- 00:15:52.525 --> 00:15:55.195 right before the break that you
- NOTE Confidence: 0.7806404766666667
- $00{:}15{:}55{.}195 \dashrightarrow 00{:}15{:}57{.}425$  mentioned was the fact that it's
- NOTE Confidence: 0.7806404766666667
- $00:15:57.425 \rightarrow 00:15:59.706$  really important to develop a trusting
- NOTE Confidence: 0.7806404766666667
- $00:15:59.706 \longrightarrow 00:16:01.831$  relationship with your patient and
- NOTE Confidence: 0.7806404766666667
- $00:16:01.831 \longrightarrow 00:16:04.282$  to address their needs.
- NOTE Confidence: 0.7806404766666667
- $00:16:04.282 \rightarrow 00:16:06.508$  But another thing that you mentioned
- NOTE Confidence: 0.7806404766666667
- $00{:}16{:}06{.}510 \dashrightarrow 00{:}16{:}09{.}312$  was how there were inequities in
- NOTE Confidence: 0.7806404766666667
- $00{:}16{:}09{.}312 \dashrightarrow 00{:}16{:}12{.}038$  terms of clinical trials and you
- NOTE Confidence: 0.7806404766666667
- 00:16:12.038 --> 00:16:14.726 did in passing touch
- NOTE Confidence: 0.7806404766666667
- 00:16:14.726 --> 00:16:17.312 upon the idea that African American
- NOTE Confidence: 0.7806404766666667

00:16:17.312 --> 00:16:19.892 patients may be distrusting of

NOTE Confidence: 0.7806404766666667

 $00:16:19.892 \rightarrow 00:16:22.040$  the entire healthcare system,

NOTE Confidence: 0.7806404766666667

 $00:16:22.040 \longrightarrow 00:16:24.130$  let alone the physician sitting

NOTE Confidence: 0.7806404766666667

 $00:16:24.130 \longrightarrow 00:16:27.419$  in front of them with regards to

NOTE Confidence: 0.7806404766666667

 $00:16:27.419 \longrightarrow 00:16:29.659$  participation in clinical trials

NOTE Confidence: 0.7806404766666667

 $00{:}16{:}29.659 \dashrightarrow 00{:}16{:}31.899$  due to historical unethical

NOTE Confidence: 0.7806404766666667

 $00{:}16{:}31{.}979 \dashrightarrow 00{:}16{:}35{.}346$  behavior on the part of the medical

NOTE Confidence: 0.7806404766666667

 $00:16:35.346 \longrightarrow 00:16:36.789$  and scientific community.

NOTE Confidence: 0.7806404766666667

 $00{:}16{:}36{.}790 \dashrightarrow 00{:}16{:}39{.}448$  How do we address that barrier

NOTE Confidence: 0.7806404766666667

00:16:39.448 --> 00:16:40.777 now going forward?

NOTE Confidence: 0.925636080769231

00:16:40.950 --> 00:16:42.602 I want to be a little bit

NOTE Confidence: 0.925636080769231

 $00:16:42.602 \rightarrow 00:16:44.008$  more clear when I say this.

NOTE Confidence: 0.925636080769231

 $00{:}16{:}44.010 \dashrightarrow 00{:}16{:}47.830$  And exactly what you just asked me is,

NOTE Confidence: 0.925636080769231

 $00{:}16{:}47.830 \dashrightarrow 00{:}16{:}51.166$  often how it's framed within the data

NOTE Confidence: 0.925636080769231

 $00{:}16{:}51{.}166 \dashrightarrow 00{:}16{:}54{.}741$  and within social media is that the black

NOTE Confidence: 0.925636080769231

 $00{:}16{:}54{.}741 \dashrightarrow 00{:}16{:}57{.}739$  or the African American community is

- NOTE Confidence: 0.925636080769231
- $00:16:57.739 \rightarrow 00:17:01.177$  distrusting of the entire medical practice.
- NOTE Confidence: 0.925636080769231
- 00:17:01.180 --> 00:17:05.296 That framework is what often actually perpetuates
- $00:17:08.616 \rightarrow 00:17:10.632$  this idea of OK, well, they they don't trust this.
- NOTE Confidence: 0.925636080769231
- $00:17:10.640 \longrightarrow 00:17:13.910$  Instead if we shift it to,
- NOTE Confidence: 0.925636080769231
- 00:17:13.910 --> 00:17:16.886 I need to move in a trusting manner,
- NOTE Confidence: 0.925636080769231
- $00{:}17{:}16.890 \dashrightarrow 00{:}17{:}20.787$  I need to be more trustworthy as a physician.
- NOTE Confidence: 0.925636080769231
- $00{:}17{:}20.790 \dashrightarrow 00{:}17{:}23.422$  That means that it's not the
- NOTE Confidence: 0.925636080769231
- $00:17:23.422 \rightarrow 00:17:25.040$  responsibility of the minoritized
- NOTE Confidence: 0.925636080769231
- $00:17:25.040 \longrightarrow 00:17:27.578$  patient population such as the black
- NOTE Confidence: 0.925636080769231
- $00:17:27.578 \rightarrow 00:17:30.189$  patients to to move more trusting.
- NOTE Confidence: 0.925636080769231
- $00{:}17{:}30{.}190 \dashrightarrow 00{:}17{:}32{.}878$  It is really on the healthcare
- NOTE Confidence: 0.925636080769231
- $00:17:32.878 \rightarrow 00:17:35.388$  system to move in a trusting way.
- NOTE Confidence: 0.925636080769231
- $00:17:35.390 \longrightarrow 00:17:37.346$  So we don't as a community
- NOTE Confidence: 0.925636080769231
- $00:17:37.350 \rightarrow 00:17:39.960$  don't think that my patients
- NOTE Confidence: 0.925636080769231
- $00:17:39.960 \longrightarrow 00:17:41.265$  that are minoritized,
- NOTE Confidence: 0.925636080769231
- $00:17:41.270 \longrightarrow 00:17:43.097$  they have to shift their way of

- NOTE Confidence: 0.925636080769231
- $00:17:43.097 \rightarrow 00:17:44.700$  thinking and things of that nature.
- NOTE Confidence: 0.925636080769231
- $00:17:44.700 \longrightarrow 00:17:46.144$  Because their
- NOTE Confidence: 0.925636080769231
- $00:17:46.144 \rightarrow 00:17:47.588$  thinking is largely
- NOTE Confidence: 0.925636080769231
- $00{:}17{:}47{.}588 \dashrightarrow 00{:}17{:}49{.}410$  a result of historical data.
- NOTE Confidence: 0.925636080769231
- $00{:}17{:}49{.}410 \dashrightarrow 00{:}17{:}51{.}938$  And I'm using the word history very loosely
- NOTE Confidence: 0.925636080769231
- $00:17:51.938 \rightarrow 00:17:53.929$  because it's still actively happens.
- NOTE Confidence: 0.925636080769231
- $00:17:53.930 \longrightarrow 00:17:55.410$  We saw that in COVID.
- NOTE Confidence: 0.925636080769231
- $00:17:55.410 \rightarrow 00:17:57.944$  We saw that in many other things.
- NOTE Confidence: 0.925636080769231
- 00:17:57.950 --> 00:17:59.237 It's not just
- NOTE Confidence: 0.925636080769231
- $00{:}17{:}59{.}237 \dashrightarrow 00{:}18{:}01{.}382$  the unfortunate events of Henrietta
- NOTE Confidence: 0.925636080769231
- 00:18:01.382 --> 00:18:04.350 Lacks or the Tuskegee syphilis study,
- NOTE Confidence: 0.925636080769231
- $00{:}18{:}04{.}350 \dashrightarrow 00{:}18{:}06{.}270$  this happens every single day.
- NOTE Confidence: 0.925636080769231
- $00{:}18{:}06{.}270 \dashrightarrow 00{:}18{:}08{.}790$  So again, it just shows that
- NOTE Confidence: 0.925636080769231
- $00{:}18{:}08{.}790 \dashrightarrow 00{:}18{:}10{.}470$  this responsibility is really,
- NOTE Confidence: 0.925636080769231
- $00{:}18{:}10{.}470 \dashrightarrow 00{:}18{:}12{.}774$  really on us as a healthcare
- NOTE Confidence: 0.925636080769231

 $00:18:12.774 \rightarrow 00:18:14.310$  system and as providers.

NOTE Confidence: 0.925636080769231

 $00{:}18{:}14{.}310 \dashrightarrow 00{:}18{:}16{.}158$  So what can we do to move

NOTE Confidence: 0.925636080769231

 $00:18:16.158 \rightarrow 00:18:18.129$  in more of a trusting way?

NOTE Confidence: 0.925636080769231

 $00:18:18.130 \rightarrow 00:18:21.750$  We can be extremely transparent.

NOTE Confidence: 0.925636080769231

 $00:18:21.750 \longrightarrow 00:18:25.278$  We can arrange the clinical trial

NOTE Confidence: 0.925636080769231

 $00{:}18{:}25{.}278 \dashrightarrow 00{:}18{:}28{.}850$  criteria to be more inclusive.

NOTE Confidence: 0.925636080769231

00:18:28.850 --> 00:18:29.948 We can

NOTE Confidence: 0.925636080769231

 $00:18:29.948 \rightarrow 00:18:32.693$  actually have more providers that

NOTE Confidence: 0.925636080769231

 $00{:}18{:}32.693 \dashrightarrow 00{:}18{:}35.575$  show a concordance between the

NOTE Confidence: 0.925636080769231

00:18:35.575 - 00:18:38.415 provider and the patients and

NOTE Confidence: 0.925636080769231

 $00:18:38.415 \longrightarrow 00:18:41.220$  the communities that they serve.

NOTE Confidence: 0.925636080769231

 $00:18:41.220 \rightarrow 00:18:44.034$  Those are things that when a patient

NOTE Confidence: 0.925636080769231

 $00:18:44.034 \rightarrow 00:18:46.152$  from a minoritized community walks

NOTE Confidence: 0.925636080769231

 $00:18:46.152 \longrightarrow 00:18:48.654$  into a hospital and they don't

NOTE Confidence: 0.925636080769231

 $00:18:48.654 \rightarrow 00:18:51.099$  see anyone that looks like them,

NOTE Confidence: 0.925636080769231

 $00:18:51.100 \longrightarrow 00:18:52.975$  that is the representation of

- NOTE Confidence: 0.925636080769231
- $00:18:52.975 \longrightarrow 00:18:54.867$  the health care system, right?
- NOTE Confidence: 0.925636080769231
- $00{:}18{:}54{.}867 \dashrightarrow 00{:}18{:}57{.}189$  That means that we should be
- NOTE Confidence: 0.925636080769231
- 00:18:57.189 --> 00:18:58.780 striving to improve more,
- NOTE Confidence: 0.925636080769231
- $00{:}18{:}58{.}780 \dashrightarrow 00{:}19{:}01{.}104$  more providers and increase
- NOTE Confidence: 0.925636080769231
- $00:19:01.104 \rightarrow 00:19:02.847$  actual workforce diversity.
- NOTE Confidence: 0.925636080769231
- $00:19:02.850 \longrightarrow 00:19:04.594$  So that way, again,
- NOTE Confidence: 0.925636080769231
- $00:19:04.594 \longrightarrow 00:19:06.774$  it's more representative of the
- NOTE Confidence: 0.925636080769231
- $00:19:06.774 \rightarrow 00:19:08.649$  community that we're serving.
- NOTE Confidence: 0.925636080769231
- $00:19:08.650 \longrightarrow 00:19:10.358$  And we see that right here in
- NOTE Confidence: 0.925636080769231
- $00:19:10.358 \longrightarrow 00:19:11.720$  the New Haven community.
- NOTE Confidence: 0.925636080769231
- $00:19:11.720 \longrightarrow 00:19:14.948$  We should strive to be more
- NOTE Confidence: 0.925636080769231
- $00{:}19{:}14.950 \dashrightarrow 00{:}19{:}17.150$  representative of that actual
- NOTE Confidence: 0.925636080769231
- $00:19:17.150 \longrightarrow 00:19:18.250$  patient population,
- NOTE Confidence: 0.925636080769231
- $00{:}19{:}18.250 \dashrightarrow 00{:}19{:}19.460$  if that makes any sense.
- NOTE Confidence: 0.8694704
- $00{:}19{:}19{.}570 \dashrightarrow 00{:}19{:}24{.}778$  You know, I find that for the general
- NOTE Confidence: 0.8694704

00:19:24.778 --> 00:19:28.230 population and for minoritized patients

NOTE Confidence: 0.8694704

 $00:19:28.230 \longrightarrow 00:19:33.550$  as a segment of that general population,

NOTE Confidence: 0.8694704

00:19:33.550 --> 00:19:37.454 many patients and I don't think that this

NOTE Confidence: 0.8694704

 $00:19:37.454 \rightarrow 00:19:40.974$  is necessarily particular to minorities,

NOTE Confidence: 0.8694704

00:19:40.974 --> 00:19:44.770 but could often come

NOTE Confidence: 0.8694704

00:19:44.770 --> 00:19:47.610 with a sense of

NOTE Confidence: 0.8694704

00:19:47.610 --> 00:19:52.559 I don't want to be experimented upon.

NOTE Confidence: 0.8694704

 $00:19:52.560 \longrightarrow 00:19:55.328$  And I think that your

NOTE Confidence: 0.8694704

00:19:55.328 --> 00:19:57.393 point about building a trusting

NOTE Confidence: 0.8694704

 $00:19:57.393 \rightarrow 00:19:59.553$  relationship is a good one,

NOTE Confidence: 0.8694704

 $00{:}19{:}59{.}560 \dashrightarrow 00{:}20{:}02{.}792$  but how else can we kind of convey

NOTE Confidence: 0.8694704

 $00{:}20{:}02{.}792 \dashrightarrow 00{:}20{:}05{.}808$  to patients the

NOTE Confidence: 0.8694704

00:20:05.808 --> 00:20:07.920 importance of clinical trials?

NOTE Confidence: 0.8694704

 $00:20:07.920 \longrightarrow 00:20:10.362$  Because the other thing is that

NOTE Confidence: 0.8694704

 $00{:}20{:}10.362 \dashrightarrow 00{:}20{:}13.115$  clinical trials are so important to

NOTE Confidence: 0.8694704

 $00:20:13.115 \rightarrow 00:20:15.720$  actually improving health outcomes to

- NOTE Confidence: 0.8694704
- $00:20:15.720 \rightarrow 00:20:18.958$  a given population and we saw that
- NOTE Confidence: 0.8694704
- $00{:}20{:}18.958 \dashrightarrow 00{:}20{:}21.358$  even in looking at gender disparities
- NOTE Confidence: 0.8694704
- $00{:}20{:}21{.}360 \dashrightarrow 00{:}20{:}23{.}460$  right when a lot of the studies
- NOTE Confidence: 0.8694704
- $00{:}20{:}23.460 \dashrightarrow 00{:}20{:}25.530$  when cardiac medications were done on
- NOTE Confidence: 0.8694704
- $00{:}20{:}25{.}530 \dashrightarrow 00{:}20{:}28{.}258$  men and then we discovered that cardiac
- NOTE Confidence: 0.8694704
- 00:20:28.258 --> 00:20:30.820 disease is very different in women,
- NOTE Confidence: 0.8694704
- $00:20:30.820 \longrightarrow 00:20:32.895$  but when women were excluded
- NOTE Confidence: 0.8694704
- $00:20:32.895 \longrightarrow 00:20:34.140$  from clinical trials,
- NOTE Confidence: 0.8694704
- $00:20:34.140 \longrightarrow 00:20:36.924$  it really leads to this void
- NOTE Confidence: 0.8694704
- $00:20:36.924 \longrightarrow 00:20:40.020$  of data for that population.
- NOTE Confidence: 0.8694704
- $00:20:40.020 \longrightarrow 00:20:42.096$  So can you address that?
- NOTE Confidence: 0.866264165454545
- 00:20:42.830 --> 00:20:44.769 Of course and you said something
- NOTE Confidence: 0.866264165454545
- $00:20:44.769 \longrightarrow 00:20:46.150$  that was extremely important.
- NOTE Confidence: 0.866264165454545
- $00{:}20{:}46.150 \dashrightarrow 00{:}20{:}48.214$  So when we think about clinical
- NOTE Confidence: 0.866264165454545
- $00:20:48.214 \rightarrow 00:20:50.470$  trials whether it's in cancer care
- NOTE Confidence: 0.866264165454545
$00:20:50.470 \rightarrow 00:20:52.906$  delivery or in other chronic illnesses,

NOTE Confidence: 0.866264165454545

 $00{:}20{:}52{.}910 \dashrightarrow 00{:}20{:}56{.}403$  they are as you just mentioned the

NOTE Confidence: 0.866264165454545

 $00:20:56.403 \rightarrow 00:21:00.415$  initial steps that are critical for drug

NOTE Confidence: 0.866264165454545

 $00:21:00.415 \rightarrow 00:21:04.033$  discovery along with drug development and

NOTE Confidence: 0.866264165454545

 $00{:}21{:}04.040 \dashrightarrow 00{:}21{:}06.924$  one of the most important components of

NOTE Confidence: 0.866264165454545

 $00:21:06.924 \rightarrow 00:21:09.089$  studies and specifically clinical trials

NOTE Confidence: 0.866264165454545

 $00:21:09.089 \rightarrow 00:21:12.092$  we're speaking about is to be generalizable.

NOTE Confidence: 0.866264165454545

 $00{:}21{:}12{.}100 \dashrightarrow 00{:}21{:}14{.}484$  And all that means is that what we

NOTE Confidence: 0.866264165454545

 $00:21:14.484 \rightarrow 00:21:16.849$  take from this trial or this study,

NOTE Confidence: 0.866264165454545

 $00:21:16.850 \rightarrow 00:21:19.118$  we should be able to generalize it

NOTE Confidence: 0.866264165454545

 $00{:}21{:}19{.}118 \dashrightarrow 00{:}21{:}21{.}507$  to the patients that are in fact

NOTE Confidence: 0.866264165454545

 $00:21:21.507 \longrightarrow 00:21:23.197$  impacted by said disease.

NOTE Confidence: 0.866264165454545

 $00:21:23.200 \longrightarrow 00:21:24.859$  So we know that cancer in fact

NOTE Confidence: 0.866264165454545

 $00{:}21{:}24.859 \dashrightarrow 00{:}21{:}25.960$  does not see color,

NOTE Confidence: 0.866264165454545

 $00{:}21{:}25{.}960 \dashrightarrow 00{:}21{:}28{.}918$  meaning that cancer does not pick

NOTE Confidence: 0.866264165454545

 $00:21:28.920 \rightarrow 00:21:31.727$  one to actually develop in because they

NOTE Confidence: 0.866264165454545

00:21:31.727 --> 00:21:34.794 are black, they are white, etcetera.

NOTE Confidence: 0.866264165454545

 $00:21:34.794 \longrightarrow 00:21:37.862$  And when we do these studies in

NOTE Confidence: 0.866264165454545

 $00:21:37.862 \longrightarrow 00:21:40.011$  largely non Hispanic white patients

NOTE Confidence: 0.866264165454545

 $00{:}21{:}40.011 \dashrightarrow 00{:}21{:}42.818$  and we do not include non Hispanic

NOTE Confidence: 0.866264165454545

 $00:21:42.818 \longrightarrow 00:21:45.512$  black or Hispanics etcetera or

NOTE Confidence: 0.866264165454545

 $00:21:45.512 \rightarrow 00:21:47.274$  other minoritized patients,

NOTE Confidence: 0.866264165454545

 $00:21:47.274 \longrightarrow 00:21:50.598$  then how in fact is that

NOTE Confidence: 0.866264165454545

00:21:50.598 --> 00:21:51.706 information generalizable?

NOTE Confidence: 0.866264165454545

 $00{:}21{:}51{.}710 \dashrightarrow 00{:}21{:}53{.}187$  And that is critical and I just

NOTE Confidence: 0.866264165454545

 $00:21:53.187 \longrightarrow 00:21:54.738$  want to make sure that that is

 $00:21:55.322 \rightarrow 00:21:57.359$  conveyed here as you just said is

NOTE Confidence: 0.866264165454545

 $00{:}21{:}57{.}359 \dashrightarrow 00{:}21{:}59{.}614$  that we should strive to make sure

NOTE Confidence: 0.866264165454545

 $00:21:59.614 \rightarrow 00:22:01.571$  that the patients that are hopefully

NOTE Confidence: 0.866264165454545

 $00{:}22{:}01{.}571 \dashrightarrow 00{:}22{:}04{.}099$  going to be treated with this drug are

NOTE Confidence: 0.866264165454545

 $00:22:04.100 \rightarrow 00:22:05.864$  actually those that it is studied in,

NOTE Confidence: 0.866264165454545

 $00:22:05.870 \rightarrow 00:22:07.904$  so then we can actually generalize

- NOTE Confidence: 0.866264165454545
- $00:22:07.904 \longrightarrow 00:22:09.260$  it to the population.
- NOTE Confidence: 0.866264165454545
- $00:22:09.260 \longrightarrow 00:22:11.748$  The way that I think that we can
- NOTE Confidence: 0.866264165454545
- $00{:}22{:}11.748 \dashrightarrow 00{:}22{:}14.490$  do this is to actually increase
- NOTE Confidence: 0.866264165454545
- $00:22:14.490 \rightarrow 00:22:17.040$  awareness to educate the community.
- NOTE Confidence: 0.866264165454545
- $00{:}22{:}17.040 \dashrightarrow 00{:}22{:}20.112$  And I think that's one of the most
- NOTE Confidence: 0.866264165454545
- $00{:}22{:}20.112 \dashrightarrow 00{:}22{:}22.294$  important things is actually to
- NOTE Confidence: 0.866264165454545
- $00:22:22.294 \rightarrow 00:22:24.958$  include the community in the research.
- NOTE Confidence: 0.866264165454545
- 00:22:24.960 --> 00:22:26.572 Community outreach is very,
- NOTE Confidence: 0.866264165454545
- $00:22:26.572 \rightarrow 00:22:28.587$  very critical for advancing research
- NOTE Confidence: 0.866264165454545
- $00:22:28.587 \rightarrow 00:22:30.186$  because these are the patients
- NOTE Confidence: 0.866264165454545
- $00:22:30.186 \longrightarrow 00:22:31.896$  that we need to be touching.
- NOTE Confidence: 0.866264165454545
- $00:22:31.900 \longrightarrow 00:22:33.105$  So we should be including
- NOTE Confidence: 0.866264165454545
- 00:22:33.105 --> 00:22:34.310 them from the very beginning,
- NOTE Confidence: 0.866264165454545
- $00{:}22{:}34{.}310 \dashrightarrow 00{:}22{:}37{.}435$  developing stages all throughout because
- NOTE Confidence: 0.866264165454545
- $00{:}22{:}37{.}435 \dashrightarrow 00{:}22{:}39{.}520$  again, that's the Community that is
- NOTE Confidence: 0.866264165454545

 $00:22:39.520 \rightarrow 00:22:41.885$  largely minoritized and unfortunately

NOTE Confidence: 0.866264165454545

00:22:41.885 --> 00:22:43.777 not receiving Equitable care

NOTE Confidence: 0.867662527894737

 $00:22:43.850 \longrightarrow 00:22:47.826$  and I think to your point getting the NOTE Confidence: 0.867662527894737

 $00:22:47.826 \rightarrow 00:22:50.364$  Community involved early on allows

NOTE Confidence: 0.867662527894737

 $00{:}22{:}50{.}364 \dashrightarrow 00{:}22{:}53{.}686$  for that building of trust allows for

NOTE Confidence: 0.867662527894737

 $00:22:53.686 \longrightarrow 00:22:56.598$  for people to really get engaged and NOTE Confidence: 0.867662527894737

00:22:56.598 --> 00:23:00.510 be interested in moving

NOTE Confidence: 0.867662527894737

 $00{:}23{:}00{.}510 \dashrightarrow 00{:}23{:}03{.}495$  forward with with clinical trials.

NOTE Confidence: 0.867662527894737

 $00{:}23{:}03{.}500 \dashrightarrow 00{:}23{:}05{.}378$  You know, the other question that

NOTE Confidence: 0.867662527894737

 $00{:}23{:}05{.}378 \dashrightarrow 00{:}23{:}08{.}036$  I have is that so often when we

NOTE Confidence: 0.867662527894737

 $00{:}23{:}08{.}036 \dashrightarrow 00{:}23{:}10{.}034$  talk about disparities and we talk

NOTE Confidence: 0.867662527894737

00:23:10.104 --> 00:23:11.868 about minority populations,

NOTE Confidence: 0.867662527894737

 $00:23:11.870 \rightarrow 00:23:15.370$  very often the conversation really

NOTE Confidence: 0.867662527894737

 $00:23:15.370 \rightarrow 00:23:18.870$  revolves around race and ethnicity.

NOTE Confidence: 0.867662527894737

 $00{:}23{:}18.870 \dashrightarrow 00{:}23{:}22.054$  But we've seen that a similar story can

NOTE Confidence: 0.867662527894737

 $00:23:22.054 \rightarrow 00:23:25.569$  be told for other minority populations,

- NOTE Confidence: 0.867662527894737
- $00:23:25.570 \longrightarrow 00:23:28.492$  whether that is people who are
- NOTE Confidence: 0.867662527894737
- $00:23:28.492 \longrightarrow 00:23:29.466$  sexual minorities.
- NOTE Confidence: 0.867662527894737
- $00:23:29.470 \longrightarrow 00:23:33.460$  So the LGBTQ plus community who
- NOTE Confidence: 0.867662527894737
- $00{:}23{:}33{.}460 \dashrightarrow 00{:}23{:}36{.}900$  very similarly have
- NOTE Confidence: 0.867662527894737
- $00:23:36.900 \rightarrow 00:23:40.940$  not necessarily a great trusting
- NOTE Confidence: 0.867662527894737
- $00{:}23{:}40{.}940 \dashrightarrow 00{:}23{:}44{.}172$  relationship with their healthcare
- NOTE Confidence: 0.867662527894737
- $00:23:44.172 \longrightarrow 00:23:47.422$  providers and often suffer poor
- NOTE Confidence: 0.867662527894737
- $00:23:47.422 \longrightarrow 00:23:50.337$  health outcomes as a result.
- NOTE Confidence: 0.867662527894737
- $00{:}23{:}50{.}340 \dashrightarrow 00{:}23{:}54{.}405$  Religious minorities who may similarly
- NOTE Confidence: 0.867662527894737
- 00:23:54.405 00:23:58.460 be faced with certain stigma.
- NOTE Confidence: 0.867662527894737
- $00:23:58.460 \rightarrow 00:24:03.465$  How can we learn from our experience?
- NOTE Confidence: 0.867662527894737
- $00{:}24{:}03{.}470 \dashrightarrow 00{:}24{:}06{.}848$  Looking at racial and ethnic disparities,
- NOTE Confidence: 0.867662527894737
- $00:24:06.850 \longrightarrow 00:24:08.622$  to expand that,
- NOTE Confidence: 0.867662527894737
- $00{:}24{:}08.622 \dashrightarrow 00{:}24{:}11.794$  to look at other minority populations for
- NOTE Confidence: 0.867662527894737
- $00{:}24{:}11.794 \dashrightarrow 00{:}24{:}14.870$  whom the same situations may occur.
- NOTE Confidence: 0.829021318181818

 $00:24:15.450 \longrightarrow 00:24:18.726$  I think the way that there's so

NOTE Confidence: 0.829021318181818

 $00:24:18.726 \longrightarrow 00:24:22.001$  much to have learned from in

NOTE Confidence: 0.829021318181818

 $00:24:22.001 \longrightarrow 00:24:24.623$  these last two to three years.

NOTE Confidence: 0.829021318181818

 $00:24:24.630 \longrightarrow 00:24:27.186$  2020 was such a rough year

NOTE Confidence: 0.829021318181818

 $00:24:27.186 \longrightarrow 00:24:28.890$  for the entire world.

NOTE Confidence: 0.829021318181818

 $00{:}24{:}28{.}890 \dashrightarrow 00{:}24{:}31{.}778$  But then if we think about the minoritized

NOTE Confidence: 0.829021318181818

 $00:24:31.778 \rightarrow 00:24:34.189$  communities and how they were impacted by

NOTE Confidence: 0.829021318181818

 $00:24:34.190 \rightarrow 00:24:36.302$  COVID and we think about George

NOTE Confidence: 0.829021318181818

 $00{:}24{:}36{.}302 \dashrightarrow 00{:}24{:}38{.}891$  Floyd and we think about so many

NOTE Confidence: 0.829021318181818

 $00:24:38.891 \rightarrow 00:24:41.093$  others that have endured so many

NOTE Confidence: 0.829021318181818

 $00:24:41.093 \rightarrow 00:24:43.859$  other structurally racist consequences,

NOTE Confidence: 0.829021318181818

 $00:24:43.860 \longrightarrow 00:24:46.317$  a lot of that is a result,

NOTE Confidence: 0.829021318181818

 $00:24:46.320 \longrightarrow 00:24:49.036$  as I said earlier, from structural racism.

NOTE Confidence: 0.829021318181818

00:24:49.040 --> 00:24:50.978 But also what's very critical here,

NOTE Confidence: 0.829021318181818

 $00:24:50.980 \longrightarrow 00:24:52.464$  to answer your question,

NOTE Confidence: 0.829021318181818

 $00:24:52.464 \longrightarrow 00:24:53.577$  is implicit biases.

NOTE Confidence: 0.829021318181818

 $00:24:53.580 \rightarrow 00:24:55.757$  We walk into the room oftentimes,

NOTE Confidence: 0.829021318181818

 $00:24:55.760 \rightarrow 00:24:58.960$  and I'm using we importantly because we all

NOTE Confidence: 0.829021318181818

 $00:24:58.960 \rightarrow 00:25:02.356$  in fact carry implicit biases as humans.

NOTE Confidence: 0.829021318181818

 $00:25:02.360 \longrightarrow 00:25:03.568$  That is understood because

NOTE Confidence: 0.829021318181818

 $00:25:03.568 \longrightarrow 00:25:04.776$  that is human nature.

NOTE Confidence: 0.829021318181818

 $00{:}25{:}04.780 \dashrightarrow 00{:}25{:}06.244$  One of the most important things to do,

NOTE Confidence: 0.829021318181818

 $00:25:06.250 \longrightarrow 00:25:07.882$  in fact with that implicit bias

NOTE Confidence: 0.829021318181818

 $00:25:07.882 \longrightarrow 00:25:09.389$  is to be aware of it.

NOTE Confidence: 0.829021318181818

 $00:25:09.390 \longrightarrow 00:25:11.568$  To actually hone in and say,

NOTE Confidence: 0.829021318181818

00:25:11.570 --> 00:25:13.370 why am I thinking this?

NOTE Confidence: 0.829021318181818

00:25:13.370 --> 00:25:14.906 And because I am thinking this,

NOTE Confidence: 0.829021318181818

 $00:25:14.910 \longrightarrow 00:25:17.214$  how will this impact the Community

NOTE Confidence: 0.829021318181818

 $00{:}25{:}17{.}214 \dashrightarrow 00{:}25{:}19{.}810$  that I am trying to actually

NOTE Confidence: 0.829021318181818

 $00{:}25{:}19.810 \dashrightarrow 00{:}25{:}21.770$  touch and improve outcomes.

NOTE Confidence: 0.829021318181818

 $00{:}25{:}21.770 \dashrightarrow 00{:}25{:}24.157$  You can take that same statement that

NOTE Confidence: 0.829021318181818

 $00:25:24.157 \rightarrow 00:25:27.312$  I just said and apply that to other

NOTE Confidence: 0.829021318181818

 $00{:}25{:}27{.}312 \dashrightarrow 00{:}25{:}29{.}790$  minoritized communities such as you said,

NOTE Confidence: 0.829021318181818

00:25:29.790 --> 00:25:32.130 based on race, based on gender,

NOTE Confidence: 0.829021318181818

 $00:25:32.130 \rightarrow 00:25:34.082$  based on religious preference,

NOTE Confidence: 0.829021318181818

 $00{:}25{:}34.082 \dashrightarrow 00{:}25{:}34.570$  etcetera.

NOTE Confidence: 0.829021318181818

 $00{:}25{:}34{.}570 \dashrightarrow 00{:}25{:}35{.}836$  It's really being

NOTE Confidence: 0.829021318181818

00:25:35.836 --> 00:25:38.368 aware of your biases and trying

NOTE Confidence: 0.829021318181818

 $00:25:38.368 \longrightarrow 00:25:41.270$  to strive to to get rid of those

NOTE Confidence: 0.829021318181818

 $00{:}25{:}41{.}270 \dashrightarrow 00{:}25{:}43{.}602$  or to educate yourself and others

NOTE Confidence: 0.829021318181818

 $00:25:43.602 \longrightarrow 00:25:46.739$  about why you have them and how in

NOTE Confidence: 0.829021318181818

 $00:25:46.739 \longrightarrow 00:25:49.051$  fact you can flip them so that

NOTE Confidence: 0.829021318181818

00:25:49.051 -> 00:25:51.636 they're in more of a positive light

NOTE Confidence: 0.829021318181818

 $00:25:51.636 \longrightarrow 00:25:53.584$  and then ideally would

NOTE Confidence: 0.829021318181818

 $00{:}25{:}53{.}584 \dashrightarrow 00{:}25{:}55{.}539$  result in more positive treatment

NOTE Confidence: 0.829021318181818

 $00{:}25{:}55{.}539 \dashrightarrow 00{:}25{:}57{.}780$  and outcomes for said patients.

NOTE Confidence: 0.8806612166666667

00:25:58.490 --> 00:26:02.290 Yeah, I think it's so important to

- NOTE Confidence: 0.8806612166666667
- $00:26:02.290 \rightarrow 00:26:06.130$  really think about our our biases because
- NOTE Confidence: 0.8806612166666667
- $00{:}26{:}06{.}130 \dashrightarrow 00{:}26{:}09{.}410$  it seems like we've had the
- NOTE Confidence: 0.8806612166666667
- $00:26:09.410 \rightarrow 00:26:12.829$  same song played many many times over.
- NOTE Confidence: 0.8806612166666667
- 00:26:12.830 --> 00:26:14.775 Whether it's you know disparities
- NOTE Confidence: 0.880661216666667
- $00{:}26{:}14.775 \dashrightarrow 00{:}26{:}17.230$  based on gender and women's rights,
- NOTE Confidence: 0.8806612166666667
- $00:26:17.230 \longrightarrow 00:26:19.470$  whether we see disparities based
- NOTE Confidence: 0.880661216666667
- 00:26:19.470 --> 00:26:22.370 on race and and racial rights,
- NOTE Confidence: 0.880661216666667
- 00:26:22.370 --> 00:26:24.641 ethnicity, LGBTQ status.
- NOTE Confidence: 0.8806612166666667
- $00:26:24.641 \longrightarrow 00:26:28.426$  You know people who are
- NOTE Confidence: 0.880661216666667
- 00:26:28.430 --> 00:26:30.642 anti-Semitic or Islamophobic,
- NOTE Confidence: 0.8806612166666667
- $00:26:30.642 \longrightarrow 00:26:34.420$  I mean it's all under that
- NOTE Confidence: 0.880661216666667
- $00:26:34.420 \longrightarrow 00:26:37.794$  banner of implicit bias and truly
- NOTE Confidence: 0.8806612166666667
- $00{:}26{:}37.794 \dashrightarrow 00{:}26{:}41.178$  does have an impact on outcomes.
- NOTE Confidence: 0.8806612166666667
- 00:26:41.180 --> 00:26:44.140 In our last few minutes I want to kind of
- NOTE Confidence: 0.8806612166666667
- 00:26:44.221 --> 00:26:47.090 bring it back to your clinical practice,
- NOTE Confidence: 0.880661216666667

 $00:26:47.090 \rightarrow 00:26:51.080$  you treat patients with GI cancers.

NOTE Confidence: 0.8806612166666667

00:26:51.080 --> 00:26:53.880 Can you talk a little bit about

NOTE Confidence: 0.880661216666667

 $00{:}26{:}53.880 \dashrightarrow 00{:}26{:}56.575$  differences in outcomes that you've seen

NOTE Confidence: 0.8806612166666667

00:26:56.575 --> 00:26:58.940 particularly in GI cancers between

NOTE Confidence: 0.880661216666667

 $00{:}26{:}58{.}940 \dashrightarrow 00{:}27{:}01{.}649$  various racial and ethnic groups

NOTE Confidence: 0.8806612166666667

 $00:27:01.649 \rightarrow 00:27:04.749$  and how you're really trying to move the

NOTE Confidence: 0.880661216666667

 $00:27:04.749 \rightarrow 00:27:07.250$  needle on changing those outcomes?

NOTE Confidence: 0.85468138

 $00:27:07.660 \longrightarrow 00:27:10.516$  So taking a step back,

NOTE Confidence: 0.85468138

00:27:10.520 --> 00:27:13.436 when we think about gastrointestinal cancers,

NOTE Confidence: 0.85468138

00:27:13.440 --> 00:27:15.380 as I alluded to earlier,

NOTE Confidence: 0.85468138

00:27:15.380 -> 00:27:19.284 it is a large variety of tumor types

NOTE Confidence: 0.85468138

00:27:19.284 --> 00:27:22.700 within GI oncology, for instance,

NOTE Confidence: 0.85468138

00:27:22.700 --> 00:27:24.779 I see patients that have stomach cancer,

NOTE Confidence: 0.85468138

 $00:27:24.780 \longrightarrow 00:27:27.240$  I see patients that have hepatocellular

NOTE Confidence: 0.85468138

 $00:27:27.240 \longrightarrow 00:27:29.114$  cancer or carcinoma, excuse me.

NOTE Confidence: 0.85468138

 $00:27:29.114 \rightarrow 00:27:31.368$  I see patients that have colon cancer,

- NOTE Confidence: 0.85468138
- 00:27:31.370 --> 00:27:33.542 rectal cancer, anal, pancreatic,

NOTE Confidence: 0.85468138

 $00:27:33.542 \rightarrow 00:27:36.800$  neuroendocrine tumors and the list really

NOTE Confidence: 0.85468138

 $00:27:36.878 \rightarrow 00:27:40.105$  goes on within those particular tumor types.

NOTE Confidence: 0.85468138

 $00:27:40.110 \rightarrow 00:27:43.470$  We know that there is a larger representation

NOTE Confidence: 0.85468138

 $00:27:43.470 \longrightarrow 00:27:46.491$  of certain patients that are in fact

NOTE Confidence: 0.85468138

 $00{:}27{:}46{.}491 \dashrightarrow 00{:}27{:}49{.}055$  going to have those particular tumor

NOTE Confidence: 0.85468138

00:27:49.055 -> 00:27:51.743 types and colon being one of those,

NOTE Confidence: 0.85468138

00:27:51.750 --> 00:27:54.830 HCC being one of those and actually

NOTE Confidence: 0.85468138

 $00:27:54.830 \rightarrow 00:27:58.189$  considering we are here right in New Haven,

NOTE Confidence: 0.85468138

 $00:27:58.190 \longrightarrow 00:27:59.762$  we know that

NOTE Confidence: 0.85468138

 $00{:}27{:}59.762 \dashrightarrow 00{:}28{:}02.382$  colon cancer specifically and HCC

NOTE Confidence: 0.85468138

 $00{:}28{:}02{.}382 \dashrightarrow 00{:}28{:}04{.}525$  specifically are largely seen

NOTE Confidence: 0.85468138

 $00{:}28{:}04{.}525 \dashrightarrow 00{:}28{:}07{.}537$  within just our New Haven community.

NOTE Confidence: 0.85468138

 $00{:}28{:}07{.}540 \dashrightarrow 00{:}28{:}10{.}924$  So there are in fact differences as far

NOTE Confidence: 0.85468138

 $00{:}28{:}10{.}924 \dashrightarrow 00{:}28{:}14{.}599$  as diagnosis and actual incidence along

NOTE Confidence: 0.85468138

 $00:28:14.599 \rightarrow 00:28:17.339$  with unfortunately increased mortality.

NOTE Confidence: 0.85468138

 $00{:}28{:}17{.}340 \dashrightarrow 00{:}28{:}20{.}140$  So as I strive to develop my clinical

NOTE Confidence: 0.85468138

00:28:20.140 --> 00:28:21.853 practice while also developing

NOTE Confidence: 0.85468138

00:28:21.853 --> 00:28:23.737 my research practice,

NOTE Confidence: 0.85468138

 $00:28:23.740 \longrightarrow 00:28:25.980$  I'll be hoping to evaluate why we

NOTE Confidence: 0.85468138

 $00{:}28{:}25{.}980 \dashrightarrow 00{:}28{:}28{.}007$  are seeing such differences and

NOTE Confidence: 0.85468138

00:28:28.007 --> 00:28:29.498 also more importantly,

NOTE Confidence: 0.85468138

 $00:28:29.500 \rightarrow 00:28:32.350$  how we can change these outcomes?

NOTE Confidence: 0.870097421666667

00:28:32.690 --> 00:28:34.832 Dr. Jacquelyne Gaddy is an assistant

NOTE Confidence: 0.870097421666667

 $00{:}28{:}34{.}832 \dashrightarrow 00{:}28{:}36{.}668$  professor of medicine and medical

NOTE Confidence: 0.870097421666667

 $00{:}28{:}36.668 \dashrightarrow 00{:}28{:}39.090$  on cology at the Yale School of Medicine.

NOTE Confidence: 0.8700974216666667

00:28:39.090 - 00:28:41.090 If you have questions,

NOTE Confidence: 0.870097421666667

 $00{:}28{:}41.090 \dashrightarrow 00{:}28{:}43.042$  the address is canceranswers@yale.edu,

NOTE Confidence: 0.8700974216666667

 $00:28:43.042 \longrightarrow 00:28:45.754$  and past editions of the program

NOTE Confidence: 0.8700974216666667

 $00{:}28{:}45.754 \dashrightarrow 00{:}28{:}48.109$  are available in audio and written

NOTE Confidence: 0.870097421666667

 $00:28:48.109 \rightarrow 00:28:49.029$  form at yalecancercenter.org.

- NOTE Confidence: 0.8700974216666667
- $00:28:49.029 \longrightarrow 00:28:51.421$  We hope you'll join us next week to
- NOTE Confidence: 0.8700974216666667
- 00:28:51.421 --> 00:28:53.241 learn more about the fight against
- NOTE Confidence: 0.8700974216666667
- 00:28:53.241 --> 00:28:55.050 cancer here on Connecticut Public Radio.
- NOTE Confidence: 0.870097421666667
- $00{:}28{:}55{.}050 \dashrightarrow 00{:}28{:}57{.}594$  Funding for Yale Cancer Answers is
- NOTE Confidence: 0.870097421666667
- $00{:}28{:}57{.}594 \dashrightarrow 00{:}29{:}00{.}000$  provided by Smilow Cancer Hospital.
